ANNUAL REPORT ON BENEFIT PERIODS
ESTABLISHED AND TERMINATED UNDER THE
UNEMPLOYMENT INSURANCE ACT

Calendar Year, 1958

(Compiled from material supplied by the Unemployment Insurance Commission)

Published by Authority of

The Honourable Gordon Churchill, Minister of Trade and Commerce

NOTICE

Following are other publications based upon statistical data in the field of unemployment insurance:

- 73-001 Statistical Report on the Operation of the Unemployment Insurance Act—Monthly—Price: \$2.00 a year.**

(Estimates of the insured population; claims filed, claimants on the live unemployment register on last working day of month; disposition of claims; claimants not entitled to benefit; weeks and amount of benefit for the month; estimates of beneficiaries; similar data on seasonal benefit claims, period December to May)

- 73-501 Employment under the Unemployment Insurance Act, 1952—Reference Paper 61 (Part 1)—Price: 25 cents.**

(Distribution of contributors by contribution classes; duration of contributory employment; age group and sex; average weeks contributed separately for new entrants and renewals)

- 73-502 Employment Under the Unemployment Insurance Act, 1954—Reference Paper 61 (Part 2)—Price: 50 cents.**

(Historical data on contributors since inception of the Act; classified by earnings, age, sex, and duration of contributory employment; numerous cross-classification; textual resumé of Act and of sampling procedure)

- 73-503 Unemployment Insurance Claims 1946-55—Reference Paper 78—Price: 50 cents.**

(Historical data on claims filed; claimants with unemployment register in the live file and of benefit payments with data on disposition of claims for 1955; historical data on monthly basis and annual basis for provinces. Appendices contain changes in Act during period)

- 73-504 Statistical Report on the Operation of the Unemployment Insurance Act 1954-58 (Supplement)—Price: 75 cents.**

(Monthly data for Canada and annual data for provinces on regular and seasonal benefit integrated; similar data for seasonal benefit only; appendices on terms, summary of Act, fishing benefit, supplemental unemployment benefit plans, schedules of contribution and benefit rates with amendments; administrative procedures and schedules)

- 11-003 Canadian Statistical Review—Monthly—Price: \$5.00 a year.**

(Includes statistics for claimants on live unemployment register, claims filed, estimate of beneficiaries, weeks of benefit, contributions to the Fund, total revenue of Fund, balance in Fund, registrations for employment and unfilled vacancies with National Employment Service)

- L12-1 The Labour Gazette—Monthly—Price: \$2.00 a year.**

(Includes decisions of the umpire; some data from first noted publication 73-001; unfilled vacancies with National Employment Service by industry and sex, occupation and sex; registrations for employment by occupation and sex; unfilled vacancies and registrations for employment by local office; placements by NES)

- LU1-58 Annual Report of the Unemployment Insurance Commission—Price: 25 cents.**

Inquiries regarding the first six reports should be directed to the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa. Inquiries regarding the other two publications should be directed to the Editor, Labour Gazette and the Unemployment Insurance Commission; subscriptions should be directed to the Circulation Manager, Labour Gazette and the Queen's Printer.

SEVENTEENTH

ANNUAL REPORT ON BENEFIT PERIODS

ESTABLISHED AND TERMINATED UNDER THE

UNEMPLOYMENT INSURANCE ACT

Calendar Year, 1958

This report is designed to provide comprehensive information on the personal and economic characteristics of the insured unemployed on benefit. Data are shown for all persons protected by insurance on the insured's sex, province, age, marital status, occupation and industry. For the person establishing benefit periods additional information is shown on his dependency position, authorized weekly benefit, and authorized duration of benefit. In addition, for the person completing benefit periods data are given on whether his benefit rights have been exhausted, and on duration and amount of benefit actually paid. The basic information was supplied by the Unemployment Insurance Commission for persons covered by insurance on U.I.C. Form 699E (Sample-Book Renewal), for persons authorized to start benefit periods on U.I.C. 417 (Computation of Benefit), and for persons completing benefit periods on U.I.C. Form 485 (Unemployment Register).

The report answers such questions as the following: How many males are covered by in-

surance, how many females? What is the age distribution of all the workers covered? What is the distribution of the insured by province, by industry, by occupation? How many of those covered are married women? Who establishes regular or seasonal benefit periods? What is the distribution by sex, province, marital status, dependency position, age, industry and occupation? What proportion of claimants establish more than one regular benefit period in a year? How long is benefit authorized on the average? How many exhaust all their benefit rights in a benefit period? How do males and females compare in this respect? How do weeks of benefit paid differ on the average for males, for each province, age group, occupational group, industrial group? Do people prefer benefit to jobs? Do they collect the maximum number of benefit cheques possible? How do weeks authorized compare with weeks paid? Is it easy to collect benefits? Who get turned down? Why?

The Insured Population

Insurable employment

All persons employed in Canada in wage earning employment under a contract of service were insurable in 1958 unless specifically excepted. Exceptions broadly included those employed in agriculture; hunting and trapping; private domestic service; medical, nursing, technical and domestic staff in hospitals or charitable institutions not carried on for gain; private duty nursing; members of the armed forces; police forces, unless insured under arrangements with the municipalities and provinces; permanent employment with the federal government or a municipal authority except in municipal public utilities and designated federal crown corporations; employment in provincial public service, unless insured under arrangements with the individual provinces; employment paid by commission, such as insurance, real estate and securities salesmen; those paid on other than an hourly, daily or piece rate and earning more than \$4,800 a year, unless election was made to continue insurance.

Coverage was extended to any person engaged in commercial fishing effective April 1, 1957, notwithstanding that such a person was not an employee of any other person and the Commission designated as employers of the fisherman any person with whom the fisherman entered into contractual or other commercial relationship in respect to his occupation. For the fisherman who has no actual employer, or whose employer is a working member of the fishing

crew, the person who first buys the catch is, in general, the "employer" under the regulations and is thus responsible for making contributions on his behalf and for keeping the necessary records. However, a buyer insures only the fisherman who delivers his catch to him or his agent in Canada on a face-to-face basis. If the buyer is outside of Canada, or is at a distance which compels the fisherman to ship the catch to him instead of making personal delivery, the responsibility for acting as employer then usually devolves on the skipper or head fisherman. With respect to a catch made from the Great Lakes, the actual employer, if there was one, was the "employer" whether or not he was a member of the crew. Effective November 30, 1958 the special rule concerning the "actual employer" in the Great Lakes area was eliminated and the same rule for determining the responsible employer was applied as elsewhere in Canada.

As most fisherman have no earnings or wages in the ordinary sense, their contributions are based on the value of their catch when delivered to the buyer, after deduction of reasonable expenses for bait, ice and fuel. The scheme provides that fishermen, generally speaking, may qualify for benefit only in the off season, when most of them are partially or wholly unemployed. A fisherman was considered for seasonal benefit only, prior to March 30, 1958, unless the contribution requirements for ordinary regular benefit could be fulfilled **without** counting any fishing contribution weeks or,

if ordinarily employed on a year-round basis, he could fulfill the special contribution requirements applicable to fishermen. This latter requirement was not applicable before April 1, 1958.

Number of persons insured

The data on the insured population presented in Tables 1 to 5 are obtained from returns in connection with the renewal of insurance books and contribution cards at June 1st together with new entrants in June. Included in the figures are those who were in insurable employment at that time and whose books or cards were therefore renewed through employers, as well as those who were unemployed and on claim whose books were renewed at their first visit to a local office after June 1st. The tables are based upon a 10 p.c. sample of returns (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers should be used with caution since they are likely to be affected by relatively large sampling variation.

The count of insured persons on a payroll at book renewal time in each of nine industry divisions is projected using the D.B.S. employment index for each group. The resulting figures are totalled to give an estimate of the number of insured persons "employed" each month. The number of active claimants with an unemployment register in the "live file" of the Commission on the last working day of the month shows the number of insured persons "unemployed". These totals are added and provision is made for any change in insurance coverage when it becomes effective. During 1958 the number of persons insured (currently in contact with the Commission either as contributors or as claimants) is estimated to have ranged from a high at January 1st of 4,236,000 to a low at November 1st of 3,987,000.

Data on the insured population provide a base to which the figures on benefit periods established and terminated can be related. Table 1 which distributes insured persons by sex, age, and industry is comparable with Table 22 for regular benefit periods terminated. Similarly, Table 2 may be compared with Tables 11 and 21; Table 3 with Tables 13 and 20; Table 4 with Tables 6, 16 and 32; while Table 5 is related to Tables 9, 17 and 33. However, the incidence of benefit periods established and terminated or benefit weeks paid derived from these tables should be used with care. The occupations and industries recorded in Tables 1 to 3 are those in which insured persons were engaged at June 1st, whereas those indicated in Tables 11, 13, 20, 21 relate to the last job held by each claimant at the time of claim. Thus, each must be taken as approximating the "usual" employment characteristic of the group covered. Nevertheless, comparison of provincial, occupational, industrial, marital status and age patterns of the insured together with those of persons establishing benefit and benefit weeks paid show significant concentrations connected with known shifts in employment.

Information on the number of persons insured at June 1, 1958 is shown under six heads (sex, province, age, marital status, occupation and industry), and in showing the relationship among these the number of possible three-way tables is 20. Of these, five three-way tables are given.

Table 1 distributes the insured by sex, age and industry. Women comprised 27.5 p.c. of the insured. Teenagers accounted for 11.3 p.c. of the insured; those from 20 to 24 years, 15.4 p.c.; those from 25 to 44 years, 47.7 p.c.; those from 45 to 64 years, 22.8 p.c.; and those over 65 years, some 2.7 p.c. Factory workers comprised 35.7 p.c. of all employed insured. While women made up 27.5 p.c. of all insured, they accounted for higher proportions of younger insured and lower proportions of older insured persons. The proportion of insured employed women varied greatly from one industry to another, from a high of 65.0 p.c. in finance, insurance and real estate to a low of 1.5 p.c. in fishing, hunting and trapping. Factory employment accounted for 30.4 p.c. of employed insured teenagers and 37.8 p.c. of those in the middle aged group from 45 to 64 years.

Table 2 groups the insured by sex, province and industry. The Atlantic region accounted for 8.0 p.c. of the insured; Quebec for 28.3 p.c.; Ontario for 40.7 p.c.; the Prairies for 13.6 p.c.; and British Columbia for 9.4 p.c. Women formed 27.5 p.c. of the insured nationally but varied in importance provincially from 29.7 p.c. in Ontario to 15.4 p.c. in Newfoundland. Factory workers accounted for 35.7 p.c. of the employed insured (37.4 p.c. of men and 31.4 p.c. of women) nationally but as much as 43.8 p.c. in Quebec and 40.2 p.c. in Ontario and as little as 14.1 p.c. in Saskatchewan.

Table 3 is concerned with the occupational attachment of the insured by sex and province. Managerial and professional workers comprised 4.0 p.c. of the insured; clerical and sales workers, i.e. clerical, commercial and financial occupations, 26.7 p.c.; unskilled and service workers, 25.2 p.c.; and others, skilled and semi-skilled workers, 44.1 p.c. The proportion of women insured varied from one occupation to another, from a high of 63.7 p.c. for clerical to a low of 0.2 p.c. for mining occupations. Manufacturing and mechanical occupations accounted for 21.3 p.c. of the insured (22.8 p.c. of men and 17.3 p.c. of women) nationally but as much as 24.8 p.c. in Quebec and 24.0 p.c. in Ontario and as little as 9.8 p.c. in Prince Edward Island.

Table 4 shows the marital status of the insured by sex and province. Married persons comprised 63.0 p.c. of the insured (68.4 p.c. for men and 49.2 p.c. for women) nationally but varied by province from a high of 66.6 p.c. in Newfoundland to a low of 57.1 p.c. in Quebec. Women accounted for 21.7 p.c. of the married, and 38.3 p.c. of other groups.

Table 5 provides an age distribution of the insured by sex and province. Among the provinces the proportion of teenagers in the insured population varied from 15.5 p.c. in Prince Edward Island to 8.7 p.c. in British Columbia; the proportion of those 20 to 24 years ranged from 18.5 p.c. in Saskatchewan to 13.6 p.c. in British Columbia; the proportion of those

25 to 44 years varied from 48.7 p.c. in Ontario to 43.6 p.c. in Saskatchewan; the proportion of those 45 to 64 years from 26.7 p.c. in New Brunswick to 20.2 p.c. in Quebec; and the proportion over 64 years from 4.0 p.c. in Prince Edward Island to 1.6 p.c. in Newfoundland.

Regular Benefit Periods Established and Terminated

Tables 6 to 13 are concerned with regular benefit periods established in 1958 and Tables 14 to 24 with regular benefit periods terminated in 1958 (whether established in 1957 or 1958). A benefit period is established when a claimant, having submitted his claim in the prescribed manner, proves he has fulfilled the minimum contribution requirements. The weeks authorized, weekly rate and amount of benefit authorized are then calculated and the benefit can be drawn upon during successive periods of unemployment. His benefit period terminates when either the amount of benefit authorized has been exhausted, or 12 months have elapsed since it was established, whichever comes first. Tables based on benefit periods established indicate the volume of claims from insured persons with some recent attachment to insured employment who are entitled to start a benefit period and provide information on the personal characteristics of such claimants. The tables based on benefit periods terminated provide figures on benefit paid as well as the number of cases so that the total number of weeks paid and weeks paid per entitled claimant can be secured for any significant group.

To establish a regular benefit period in 1958, a claimant had to satisfy these conditions:

1. Where he had no previous benefit period within the two years preceding his claim, he required
 - (a) 30 contribution weeks within the two years, and
 - (b) 8 contribution weeks within the year prior to claim.
2. Where he had a previous benefit period within the two years preceding his claim, he required in addition to 30 contribution weeks
 - (a) 8 contribution weeks in the last year or since the start of his last **regular** benefit period, whichever was the **shorter** period, and
 - (b) 24 contribution weeks in the last year, or since the start of the last benefit period, **regular or seasonal**, whichever was the **longer** period.

These qualifying periods could be prolonged up to four years by spells of sickness, non-insurable employment, self-employment, or stoppage of work owing to a labour dispute.

Consider a claimant for benefit on December 1, 1958. Assume that he had a previous regular benefit period established on August 1, 1957 which he exhausted February 1, 1958; and a seasonal B benefit period established February 1, 1958. He

would be tested with respect to regular benefit for (1) 30 contribution weeks since December 1, 1956; (2) 8 contribution weeks since December 1, 1957, since this is **shorter** than the period from August 1, 1957; and (3) 24 contribution weeks since December 1, 1957, since this is **longer** than the period from February 1, 1958.

Having established his right to insurance benefit, an insured person is usually entitled to receive payment for any week during which he proves he is unemployed, but he is disqualified from receiving benefit for every day for which he fails to prove he is (a) capable of work, subject to an exception for illness; (b) available for work, subject to an exception for illness; and (c) unable to obtain suitable employment. Benefit can be paid during periods of incapacity due to illness, injury or quarantine, if he was entitled to receive benefit at the time such illness, etc. occurred and if it was not because of the incapacity that he stopped working. It is considered that a woman during a period, generally six weeks, prior to and following childbirth is not available for work. As to "suitable employment" a claimant should be offered a job in his usual occupation if such a job is available. He should then be offered any other job which is available. If he refuses an offer of any employment, disqualification for benefit depends on whether there was a stoppage of work or labour dispute at his plant; if the employment offered was in his usual occupation, whether the rate of earnings was lower or conditions were less favourable than those prevailing; if before a reasonable interval has elapsed, or if after a reasonable interval has elapsed, and the employment was in other than his usual occupation, whether the rate of earnings was lower or conditions were less favourable than those prevailing; and whether acceptance would affect the claimant's rights to membership in, or to refrain from membership in, an association of workers.

The rate of benefit paid the claimant under the Act who had paid the required premiums; i.e. passed either the 30-weeks test and the 8 weeks test; or the 30-weeks test, 8 weeks test and 24 weeks test, was based on the average of his most recent 30 weekly contributions in the 104 weeks preceding the starting date of his benefit period. The contribution and benefit classes are shown below. It will be seen that if the claimant had 30 weekly contributions amounting to \$17.40 or more, his weekly benefit rate would be \$30.00 where he had a dependent, and \$23.00 if he did not, and in addition he could earn \$13.00 in casual, subsidiary or short-time earnings.

Contribution and Benefit Rates 1958

\$45.00-50.99	.52	.50 - .53	26.00	19.00	9.00
\$51.00-56.99	.56	.54 - .57	28.00	21.00	11.00
\$57.00 and over	.60	.58 - .60	30.00	23.00	13.00

¹ When earnings are less than \$9, the contribution is 8 cents and for benefit purposes is counted as one-half week.

The benefit rate to which the claimant is entitled; i.e. single or dependency, is established at the beginning of each benefit period, but is subject to change during the currency of the benefit period.

It should be noted that average weekly earnings, exclusive of agriculture, fishing, trapping, government and community service was estimated in 1958 to be about \$70.40. Thus, the maximum weekly benefit, including the allowance for dependents, was 42.6 per cent of average industrial earnings.

The Act specified in 1958 one week of full benefit for every two contribution weeks made in the last two years prior to the start of the benefit period, with a maximum of 36 weeks, except where extended on the basis of additional credits acquired under the 1940 Act by the transitional sections of the 1955 Act. The reference here is to the provision that a claimant's **first** benefit period, established within three years of the Act's coming into force (October 2, 1955), **that becomes exhausted**, may, on exhaustion, be extended on the basis of his contribution history under the old Act. Thus, only the claimant establishing a benefit period with an effective date prior to October 2, 1958 was entitled to consideration of any excess benefit which he would have received under the old Act had it been in force.

The minimum duration was 15 weeks. However, on a subsequent benefit period only those contributions made since the previous benefit period began or that were within a year of the new claim, whichever was the longer period, could be counted, giving a maximum of 36 weeks benefit and a minimum of 12 weeks. Additional special benefit could be provided in the form of seasonal benefit during the period from December 1, 1957 to June 28, 1958. It might be noted the provision of a nominal maximum credit of 36 weeks' benefit does not mean that 36 weeks is the maximum period for drawing regular benefit. Under the provisions regarding allowable

earnings from part-time employment while on claim, if a claimant earns more than the prescribed amount during a week while he is on claim, his benefit, though not necessarily cancelled altogether, will be reduced to some extent. His income will be maintained through the sum of partial earnings and partial benefit. The effect of this provision or of non availability for part or all of a week will be to extend the duration of his potential benefit. At the end of 36 weeks he may still have a credit and if his incidental earnings during some weeks are fairly substantial he may continue to receive benefit (with or without partial earnings) throughout 51 weeks instead of 36 weeks; i.e. until the end of his benefit period.

Benefit was not paid in 1958 to a claimant in the following cases:

1. At the start of the benefit period for a waiting period equivalent to a week of full benefit. This waiting period is somewhat like the deductible claim in an automobile or personal property insurance policy providing for the insured being himself responsible for losses up to \$50 or \$100, as the case may be. A waiting period in respect of a regular or seasonal benefit period could be waived. This was where a subsequent benefit period started **immediately** following the termination of the previous benefit period, or started in the last week thereof; and in the two **complete** weeks immediately preceding the completion of the previous benefit period, the total of the claimant's excess earnings (amounts earned during a claim week less his allowable earnings) was not greater than his benefit rate. The waiting period reduces the claimant's total benefit payment only if his benefit rights lapse, but not if he exhausts his entitlement. The waiting period provision saves expenses to the Unemployment Insurance Fund by eliminating claims for very short periods of unemployment and makes a lower rate of contributions possible. Eliminating such claims makes it unnecessary to investigate the genuineness of the unemployment, which is difficult to verify when it is only of one or two days' duration.

2. For a period not over six weeks: (a) if he lost his employment by his own industrial misconduct, or if he voluntarily left it without just cause; (b) if he had, without good cause, refused or failed to apply for suitable employment or failed to accept it, or neglected to avail himself of an opportunity of such employment; (c) if he had, without good cause, failed to attend an instruction or training course under certain circumstances, or failed to carry out a written direction given him by the Commission to assist him in finding suitable employment.
3. For any week in which he worked the full working week in the place where he was employed.
4. For any week in which the only unemployed days were Sunday, a recognized holiday of one day, the day before or the day after such holiday.
5. If he lost his employment by reason of a stoppage of work resulting from a labour dispute at the plant where he was employed, unless he proved he was not participating in, financing or directly interested in such labour dispute and did not belong to a grade or class of workers who were. This disqualification lasted for the duration of the stoppage of work.
6. If he failed to prove he was unemployed, capable of and available for work, and unable to obtain suitable employment. The claimant had to sign a written statement affirming this each week at the counter of the local office on U.I.C. Form 489 (Claimant's Weekly Report) or if reporting by mail on U.I.C. Form 497 (Postal Claimant's Report).
7. If he ceased work because of illness, injury or quarantine, he was disqualified for the duration of his incapacity or until he proved he was capable of doing some other kind of work.
8. While he was an inmate of a prison or an institution supported wholly or partly out of public funds, and while he was a resident out of Canada.

Benefit paid in 1958 was reduced by earnings received when the claimant was not fully unemployed. Where these exceeded the amount allowed under the Act, the amount of benefit was reduced by the excess. Examples of these earnings were wages for part time work; amount received for annual plant vacations, including payments through vacation stamps; and money received at separation (a) in consideration of returning to work for the same employer after the seasonal lay-off, (b) as retirement leave credits, or (c) in place of notice.

The Commission is empowered to make additional conditions for benefit in relation to persons who usually work less than a full working week; work or have worked for only part of a year in a seasonal industry or occupation; who by custom of their occupation, trade or industry, or following an agreement with their employer, are paid wholly or partly by the piece or on a basis other than time; or who are married women. No benefit regulations under these powers were in effect in 1958.

Information on persons establishing regular benefit in 1958 is shown under 10 heads (sex, province, marital status, age, occupational attachment, industrial attachment, dependency status, weekly rate of benefit authorized, duration authorized and number of periods). The number of possible three-way tables for showing the relationship among these factors is 120. Some of these relations are trivial and only 10 are shown in this report in six three-way tables and one four-way table.

Table 6 distributes persons establishing regular benefit by sex, province and marital status. The table shows the Atlantic region accounted for 10.7 p.c. of entitled claimants; Quebec for 30.9 p.c.; Ontario for 35.8 p.c.; the Prairies for 11.4 p.c.; and British Columbia for 11.1 p.c. Women comprised 22.8 p.c. of claimants. Some 32.6 p.c. of claimants were single and 63.1 p.c. were married. The proportion of claimants who were women varied from 25.4 p.c. in Ontario and 27.7 p.c. in Manitoba to 9.2 p.c. in Newfoundland. A smaller proportion of women claimants than of men were single or married and a higher proportion were widowed or separated. Among the provinces, the proportion of single claimants varied from 39.4 p.c. in Quebec to 28.5 p.c. in Ontario; the proportion of married claimants ranged from 69.5 p.c. in Newfoundland to 57.2 p.c. in Quebec; and the proportion of other cases ranged from 5.6 p.c. in Manitoba to 1.8 p.c. in Newfoundland.

Table 7 shows persons authorized to start regular benefit by sex, province and number of periods established. The proportion of all claimants establishing more than one regular benefit period in 1958 was 1.7 p.c. (2.0 p.c. for men and 0.8 p.c. for women) nationally and varied by province from a high of 4.0 p.c. in New Brunswick to a low of 0.9 p.c. in Saskatchewan and 0.7 p.c. in Alberta.

Table 8 is concerned with the dependency position of persons establishing regular benefit by sex and province. Some 47.3 p.c. (59.4 p.c. for men but only 6.2 p.c. for women) of claimants had dependents and were authorized the higher rates of benefit. Among provinces the percentage with dependents varied from 72.3 p.c. in Newfoundland to 54.4 p.c. in Alberta for men and from 12.8 p.c. in Prince Edward Island to 5.3 p.c. in Quebec for women.

Table 9 provides an age distribution of persons establishing regular benefit by sex and province. Teenagers comprised 7.2 p.c. of claimants; those from 20 to 24 years, some 17.8 p.c.; those 25 to 44 years, some 48.8 p.c.; the middle aged group, 45 to 64 years, some 22.3 p.c.; and the older claimants, 3.9 p.c. Women accounted for higher proportions of the younger than of older claimants. Among the provinces, the proportion of teenagers varied from 9.8 p.c. in Quebec to 4.6 p.c. in British Columbia; the proportion of those 20 to 24 ranged from 22.2 p.c. in Saskatchewan to 15.7 p.c. in Nova Scotia; the proportion of those 25 to 44 varied from 50.3 p.c. in Ontario to 41.6 p.c. in Prince Edward Island; the proportion of those 45 to 64 ranged from 27.9 p.c. in Nova Scotia to 19.3 p.c. in Quebec; and the proportion of those over 64 from 5.7 p.c. in Manitoba to 2.6 p.c. in Quebec.

Table 10 shows the number of regular benefit weeks authorized entitled claimants by sex and province. The overall average was 26.2 weeks in 1958 (25.6 weeks for men and 28.2 weeks for women). Among provinces, average duration ranged from 26.9 weeks in Ontario to 21.5 weeks in Prince Edward Island for men, and from 29.0 weeks in Alberta to 24.8 weeks in Prince Edward Island.

Table 11 classifies persons starting regular benefit by sex, province and industry. Factory workers accounted for 34.0 p.c. (31.6 p.c. of men and 42.2 p.c. of women) of claimants nationally but as much as 41.4 p.c. in Ontario and as little as 11.5 p.c. in Saskatchewan.

Table 12 is a four-way classification of persons establishing regular benefit periods by sex, dependency position, weekly rate of benefit and duration authorized. Women comprised 40.6 p.c. of claimants for single benefit and only 3.0 p.c. of claimants for dependency benefit. The median rate authorized claimants starting regular benefit was over \$21 (over \$24 for men and over \$13 for women). The median rate was \$17 for claimants authorized single benefit and \$28 for claimants authorized dependency benefit. The percentage of claimants for single benefit authorized both maximum benefit and duration was 9.4 p.c. (12.8 p.c. of men and 4.2 p.c. of women). The percentage of claimants for dependency benefit authorized both maximum benefit and duration was 22.3 p.c. (22.8 p.c. of men and 4.8 p.c. of women).

Table 13 furnishes information on persons establishing regular benefit by sex, province and occupational attachment. Managerial and professional workers formed 1.9 p.c. of claimants; clerical and sales workers, i.e. clerical, commercial and financial occupations accounted for 15.3 p.c.; unskilled and service workers, 29.4 p.c.; and others, skilled and semi-skilled workers 53.4 p.c. The proportion of those who established regular benefit who were women varied from a high of 68.3 p.c. for clerical workers to a low of 0.1 p.c. for electric light and power workers. Manufacturing and mechanical workers accounted for 21.2 p.c. (19.5 p.c. of men and 26.9 p.c. of women) of claimants nationally but as much as 26.1 p.c. in Ontario and as little as 7.4 p.c. in Saskatchewan.

Information on terminations of regular benefit periods in 1958 (on benefit periods established in either 1957 or 1958) is shown under 13 heads (sex, province, marital status, age, occupational attachment, industrial attachment, dependency position, weekly rate of benefit authorized, duration authorized, cause of termination, duration paid, amount authorized and amount paid). The number of possible three-way tables for showing the relationship among these factors is 286. Only nine three-way tables and one four-way table are shown.

The number of weeks of benefit paid claimants which are shown in this report were calculated by

dividing the amount of benefit paid by the weekly rate authorized.

Table 14 classifies terminations and weeks paid by sex, age and cause of termination. The exhaustion rate was 32.4 p.c. in 1958 (25.8 p.c. in 1957). The rate was slightly higher for women at 32.9 p.c. than for men at 32.3 p.c., and varied from as much as 59.8 p.c. for claimants over 64 years to as little as 27.3 p.c. for claimants 25 to 34 years. The average duration for exhausters was 21.86 weeks, ranging from 28.41 weeks for claimants over 64 years to 19.74 weeks for teenagers.

Table 15 distributes terminations, weeks paid and amount paid by sex and province. Benefit averaged \$313.87 per claimant (\$333.87 for men and \$239.56 for women), varying from \$375.77 in Newfoundland to \$287.44 in Alberta.

Table 16 arranges regular benefit periods terminated and weeks paid by sex, province and marital status. Benefit paid averaged 14.31 weeks (13.99 weeks for men and 15.52 weeks for women). Average duration ranged among provinces from 16.40 weeks in Newfoundland to 12.76 weeks in Alberta. Single claimants were paid on the average 13.88 weeks compared with 14.37 weeks for married claimants. Single women were on benefit for a shorter period, on the average, than single men; married women, however, averaged a longer period of benefit than married men. While married women claimants averaged 16.99 weeks of regular benefit nationally, duration ranged between 21.81 for Newfoundland married women and 14.17 weeks for Alberta married women.

Table 17 shows regular benefit periods terminated and weeks paid by sex, province and age. Average duration was 22.98 weeks for claimants over 64 years and 13.68 weeks for claimants 20 to 24 years. For older claimants, average duration ranged from 23.93 weeks in Ontario to 16.31 weeks in Prince Edward Island.

Table 18 distributes terminations and weeks paid by sex, province and cause of termination. The exhaustion rate varied among provinces from 52.9 p.c. in Newfoundland to 24.4 p.c. in Alberta. Duration averaged 10.70 weeks for terminations by expiry and 21.86 weeks for terminations by exhaustion of benefit rights. However, for this latter group, average duration varied from 24.25 weeks in Ontario to 18.13 weeks in Prince Edward Island.

Table 19 gives terminations and weeks paid classified by sex, province, dependency position and weekly rate of benefit authorized. Claimants for single benefit averaged 13.86 weeks, while claimants for dependency benefit averaged 14.73 weeks. Average duration of benefit varied by weekly rate from 16.88 weeks at \$12 weekly to 12.86 weeks at \$30 weekly. While claimants drawing \$30 weekly averaged 12.86 weeks nationally, average duration ranged from 16.38 weeks for this group in Newfoundland to 11.43 weeks in Alberta.

Table 20 groups terminations and weeks paid by sex, province and occupation. Average duration varied among occupations from 19.40 weeks for claimants attached to protective service work to 12.72 weeks for manufacturing and mechanical workers. Average weeks paid for this latter group ranged by province from 16.64 weeks in Newfoundland to 12.00 weeks in Alberta.

Table 21 presents terminations and weeks paid by sex, province and industry. Average duration varied among industries from 19.39 weeks for workers attached to communications to 10.23 weeks for workers attached to the fuels group of the mining industry. While former factory workers averaged 13.21 weeks of paid benefit, the duration on the average ranged from 16.19 weeks in Newfoundland to 12.07 weeks in British Columbia.

Table 22 shows terminations and weeks paid by sex, age and industry. Former factory workers averaged 13.21 weeks of paid benefit, varying from 24.02 weeks for older claimants over 64 years to 12.57 weeks for teenagers.

Table 23 is concerned with a distribution of terminations by sex, weeks authorized and weeks paid. The proportion of terminations authorized 35

or more benefit weeks was 36.5 p.c. (34.2 p.c. of men and 45.3 p.c. of women). However, the proportion paid this long was only 6.8 p.c. (5.3 p.c. of men and 12.3 p.c. of women). Some 6.9 p.c. of entitled claimants (5.9 p.c. of men and 10.6 p.c. of women) drew no benefit.

Table 24 gives terminations classified by sex, amount authorized and amount paid. Under the 1955 Act maximum entitlement to a claimant for dependency benefit was \$1,080. Under Section 121 of the 1955 Act, certain claimants, upon exhaustion of their first benefit period established prior to October 2, 1958 are entitled to have their benefit extended on the basis of contributions under the 1940 Act. In these cases the total entitlement cannot be less than it would have been under the 1940 Act. The table shows the extent to which the amounts authorized were used. The final diagonal line of figures contains, substantially, the terminations by exhaustion, i.e. those in which amounts paid equal amounts authorized. Figures to the left of this diagonal represent, progressively, terminations on which amounts paid were a smaller and smaller proportion of amounts authorized. The proportion of terminations authorized \$1,000 or more benefit was 14.1 p.c. (17.7 p.c. of men and 9.8 p.c. of women). Yet the proportion paid this much was only 2.1 p.c. (2.6 p.c. of men and 0.2 p.c. of women).

Seasonal Benefit Periods Established and Terminated

Tables 25 to 36 are concerned with seasonal benefit periods established and terminated in the period from December 1, 1957 to June 28, 1958. Seasonal benefit was made payable this year from December 1, 1957 to May 17, 1958, compared to December 31-April 20 last year. Because of the recession in 1958, a further temporary extension of the period for seasonal benefit was made from May 18 to June 28. The effect of the amendment to the Act, effective November 27, 1957, was to extend the period by approximately one month at either end so that benefit could be paid in December and from mid-April to mid-May. With the further extension seasonal benefit was payable for another month and a half.

The amended seasonal benefit provisions

A claimant who failed to qualify for regular benefit beginning with the week in which December 1, 1957 fell could qualify for seasonal benefit as follows:

1. Group A - If he had 15 contribution weeks or more since March 30, 1957 or
2. Group B - If his most recent regular benefit period terminated since May 18, 1957, **whichever was the more favourable** with respect to duration, or where duration was the same with respect to rate of benefit.

For the 1957-58 seasonal benefit period only, a claimant could qualify for seasonal benefit group B if his most recent regular benefit period terminated since April 15, 1957.

The duration of seasonal benefit was determined as follows:

1. Group A
 - (a) Five weeks' benefit for every six contribution weeks since March 30, 1957 (the previous formula was one benefit week for every two contribution weeks since the end of the previous March), or
 - (b) The number of possible benefit weeks (exclusive of the waiting week) in the period from the date of claim to May 17, 1958, which ever was **lesser**
2. Group B
 - (a) The number of weeks in the immediately previous regular benefit period, or
 - (b) The number of possible benefit weeks (exclusive of the waiting week) in the period from the date of claim to May 17, 1958, which ever was **lesser**
3. The minimum duration of seasonal benefit was theoretically 13 weeks for Group A, and 12 weeks for Group B. For both groups the maximum duration was 24 weeks.

Claimants who failed to qualify for regular benefit could not be considered for seasonal benefit:

1. Group A - If the starting date of the claim was later than the week beginning with March 23, 1958.
2. Group B - If the starting date of the claim was later than the week beginning May 4, 1958, except

- (a) If the starting date of the claim was in the week beginning May 11, 1958 and the waiting period was to be waived, it would be considered for seasonal B benefit.

The Temporary Act

Parliament passed "An Act for the Temporary Extension of Seasonal Benefit Periods under the Unemployment Insurance Act" on May 16, 1958. The extension affected:

- (a) claims active on May 17, 1958.
- (b) initial claims dealt with between the week beginning May 11th and June 28th that failed to qualify for regular benefit. These were considered for seasonal benefit Group A, on the basis of the number of contribution weeks since March 30, 1957 (not 1958); and, for Group B on the ground that the most recent regular benefit period ended after April 15, 1957; provided, in each case, that a seasonal benefit period had not already been established and exhausted since December 1, 1957,
- (c) seasonal benefit claims that were renewed after May 17, 1958.

On all seasonal benefit periods established effective on or after May 18, 1958 the waiting period was waived.

A seasonal benefit period established under the Temporary Act would not be considered a benefit period for the purpose of determining qualification for a subsequent initial claim.

Before ending this simplified account of administration of seasonal benefit claimants, attention will be drawn again to seasonal benefit claims established on or after December 1, 1957, which were exhausted. In these cases the claimant had no further entitlement and the extension did not apply to him.

Claimants for seasonal benefit had to comply with all the provisions of the Act, other than those referred to above. In the case of fishermen, however, the requirements covering the determination of the "full working week" and "availability" are waived during the seasonal benefit period. Fishing claimants benefited like others with the extension of the seasonal benefit period.

The rate of benefit paid the claimant under the Act, was based for Group A claimants on the average of all his weekly contributions subsequent to the Saturday before the 31 March concerned. The rate for Group B claimants was the same rate subject to redetermination of dependency or single position, as the claimant had in his regular benefit period. The schedule of benefit was the same as for regular benefit.

A claimant in early 1957 with 104 contribution weeks could draw 36 weeks of regular benefit in 1957 along with possible more weeks of additional credits under the Old Act and 30 weeks in the

1957-58 extended seasonal benefit period. If he had 30 contribution weeks in early 1957, he might draw 15 weeks of regular benefit, and if they terminated after April 15, 1957, he could draw a further 15 weeks of seasonal benefit in the 1957-58 seasonal benefit period. If this claimant had only 15 contribution weeks in early 1957, he could draw no regular benefit in 1957, but, if they were made since March 30, 1957, he would be entitled to draw a minimum of 13 weeks of seasonal benefit from December 1, 1957 to June 28, 1958.

Information on persons establishing seasonal benefit is shown under 12 heads (sex, group, province, marital status, age, dependency position, weekly rate of benefit authorized, occupational attachment, duration authorized, duration paid, cause of termination and industrial attachment). The number of possible three-way tables of 12 factors taken three at a time is 220. Some eight three-way tables and three four-way tables are shown in this report.

Table 26 distributes persons establishing seasonal benefit, weeks paid and amount paid by sex, group and province. The table shows the Atlantic area accounted for 19.9 p.c. of entitled claimants; Quebec for 32.5 p.c.; Ontario for 26.2 p.c.; the Prairies for 10.7 p.c.; and British Columbia for 10.7 p.c. Women comprised 20.0 p.c. of claimants. Some 46.9 p.c. of claimants established A benefit. The proportion of claimants who were women varied from 29.6 p.c. in Ontario to 3.8 p.c. in Newfoundland. Some 48.3 p.c. of men and 41.6 p.c. of women were A benefit claimants. The proportion of A claimants among provinces ranged from 73.7 p.c. in Prince Edward Island to 40.3 p.c. in Manitoba.

The overall average duration of paid benefit was 11.20 weeks (11.25 weeks for men and 11.01 weeks for women). Average duration of 11.27 weeks for A claimants was slightly higher than 11.14 weeks for B Claimants. Among provinces, average duration ranged from 13.59 weeks in Newfoundland to 9.99 weeks in Saskatchewan. The benefit paid averaged \$223.37 (\$251.83 for men and \$159.73 for women). Average benefit paid at \$230.60 for A claimants was less than \$235.83 for B claimants. Among provinces, benefit for entitled claimants ranged from \$287.19 in Newfoundland to \$215.41 in Alberta.

Table 27 classifies persons establishing seasonal benefit and weeks paid by sex, group and marital status. Single claimants formed 37.4 p.c. of all claimants; married claimants, 57.8 p.c.; and other claimants, 4.8 p.c. Group A claimants accounted for 51.1 p.c. of single persons, 44.8 p.c. of married persons, and 38.7 p.c. of other persons. Benefit weeks paid averaged 10.67 weeks for single persons, 11.45 weeks for married persons, and 12.33 weeks for other claimants.

Table 28 is concerned with the age distribution of persons establishing seasonal benefit and weeks paid them by sex and group. Teenagers comprised 11.3 p.c. of claimants; those 20 to 24 years, 16.0 p.c.; those 25 to 44, some 41.9 p.c.; the middle

aged group, 45 to 64, some 24.3 p.c.; and older persons over 64 years, 6.4 p.c. Women accounted for 16.1 p.c. of middle aged claimants and 5.4 p.c. of older claimants. Group A claimants comprised 63.8 p.c. of teenagers but only 29.6 p.c. of older claimants. Average duration was 14.97 for claimants 65 years or more but only 9.94 weeks for teenagers.

Table 29 presents persons establishing seasonal benefit and weeks paid by sex, group, dependency position and weekly rate of benefit authorized. Single benefit claimants comprised 55.3 p.c. and dependency benefit claimants 44.7 p.c. of all claimants. Those authorized the maximum benefit rate of \$30. weekly made up 11.4 p.c. of all claimants. The proportion of women with single benefit status was very high at 93.2 p.c. The proportion of A claimants with single benefit was approximately the same as for B claimants. The top benefit rate accounted for 14.2 p.c. of men but only 0.3 p.c. of women, for 9.7 p.c. of A claimants and 12.9 p.c. of B claimants. Duration at 10.97 weeks for single benefit claimants averaged less than 11.49 weeks for dependency benefit claimants. Average duration varied by rate of benefit authorized from 13.09 weeks for those paid \$8 weekly to 10.77 weeks for those paid \$9 and \$11 weekly.

Table 30 distributes persons establishing seasonal benefit and weeks paid by sex, group and occupational attachment. Managerial and professional workers comprised 1.0 p.c. of claimants; clerical and sales workers 11.2 p.c.; unskilled and service workers 36.4 p.c.; and others, skilled and semi-skilled workers, 51.4 p.c. The proportion of women varied from a high of 68.7 p.c. for commercial workers to a low of 0.3 p.c. for logging and mining workers. Manufacturing and mechanical workers accounted for 12.6 p.c. (9.4 p.c. of men and 25.4 p.c. of women) of all claimants, but varied in importance by benefit group for 10.7 p.c. of A claimants and 14.3 p.c. of B claimants. Average duration varied from 14.99 weeks for fishing workers to 8.94 weeks for financial workers.

Table 31 shows persons establishing seasonal benefit by sex, duration authorized and duration paid. The maximum duration for a person with a dependent was 30 weeks, made up of 24 weeks under the amended Act and an extension of 6 weeks under the Temporary Act. Those authorized maximum duration were 1,360 of some 470,490 claimants; 930 of 376,190 men; and 430 of 94,300 women. Only 680 claimants drew this much benefit. The proportion of all claimants who drew no benefit was 5.0 p.c.; of men, 4.3 p.c.; and of women, 7.8 p.c.

Table 32 classifies persons establishing seasonal benefit and weeks paid by sex, province and marital status. Average duration was 11.55 weeks for married women nationally, but ranged from 14.50 weeks in Prince Edward Island to 9.70 weeks in Alberta.

Table 33 gives persons establishing seasonal benefit and weeks paid by sex, province and age. Among the provinces the percentage of teenagers ranged from 14.0 p.c. in Quebec to 7.4 p.c. in New-

foundland; those 20 to 24 years from 18.4 p.c. in Quebec to 10.4 p.c. in Prince Edward Island; those 25 to 44 years from 46.0 p.c. in Newfoundland to 37.1 p.c. in Saskatchewan; those 45 to 64 years from 30.2 p.c. in Prince Edward Island to 20.4 p.c. in Quebec; and those over 64 years from 10.7 p.c. in Manitoba to 3.5 p.c. in Newfoundland. Average duration paid for those claimants 65 years and over was 14.97 weeks nationally but this varied among provinces from 16.05 weeks in Manitoba to 14.32 weeks in British Columbia.

Table 34 allots persons establishing seasonal benefit and weeks paid by sex, province and cause of termination. The figures show 44.2 p.c. of claimants exhausted their benefit rights. Newfoundland with 63.3 p.c. had the highest exhaustion rate while Alberta with 30.9 p.c. had the lowest. A slightly higher percentage of women (45.8 p.c.) than of men (43.8 p.c.) exhausted their benefit. Average duration was 8.33 weeks for terminations through lapsing and 14.83 weeks for terminations through exhaustion. Average duration for the latter group varied from 16.03 weeks in Newfoundland to 14.32 weeks in Quebec.

Table 35 distributes persons establishing seasonal benefit by sex, dependency position, duration authorized and weekly rate authorized. About 50 p.c., i.e. the median, of the claimants were authorized 13 weeks (13 weeks for men and 14 weeks for women). The median rate authorized was \$21 (\$23 for men; \$13 for women; \$17 for single benefit claimants; \$26 for dependency benefit claimants). The percentage of single benefit claimants authorized both maximum benefit and duration was 0.06 p.c. (0.06 p.c. of men and 0.05 p.c. of women). The percentage at dependency benefit rates authorized both was 0.13 p.c. (0.13 p.c. of men and 0.16 p.c. of women).

Table 36 classifies persons establishing seasonal benefit and weeks paid by sex, group and industrial attachment. Factory workers accounted for 25.0 p.c. (20.6 p.c. of men and 42.3 p.c. of women) of all claimants. Women made up as much as 78.4 p.c. of claimants attached to the clothing industry but as little as 0.6 p.c. of those attached to the fishing industry. Factory workers accounted for 23.5 p.c. of A claimants and 26.3 p.c. of B claimants. While former factory workers overall averaged 11.18 weeks of paid benefit, A claimants averaged 10.18 weeks and B claimants averaged 11.97 weeks.

Table 37 shows persons, weeks paid and amounts paid by sex, group and province prior to the extension of the seasonal benefit period from May 18 to June 28, 1958. Comparison of the table with Table 26 indicates the extension made establishment possible for a further 48,760 persons and paid to those persons and to those whose benefit was extended a further 886,610 weeks and some \$18.6 million. The effect on different provinces for establishments was as shown on the next page.

The three provinces increasing their share of the Canadian total were Quebec, Ontario and British Columbia.

Percentage Distribution of Claimants Establishing Seasonal Benefit

Province	December 1, 1957 to May 17, 1958	December 1, 1957 to June 28, 1958
Newfoundland	6.34	6.01
Prince Edward Island	1.23	1.15
Nova Scotia	5.92	5.75
New Brunswick	7.21	7.01
Quebec	32.28	32.49
Ontario	25.65	26.24
Manitoba	3.93	3.93
Saskatchewan	3.09	2.96
Alberta	3.88	3.79
British Columbia	10.47	10.67
Canada	100.00	100.00

Review of Unemployment Insurance Benefit in 1958

The foregoing comments on the detailed tables have been concerned with what the data for 1958 show, with particular reference to the characteristics known to distinguish the different groupings of claimants in this report, such as differences in sex, province, age, etc. Apart from this, something has been written about the requirements for establishing ordinary or special benefit and about instances when benefit is not payable. Some comparisons with earlier years are noted here.

The gross national product, which is a measure of the market value of all goods and services produced in Canada, showed an advance of only 2.3 p.c. over the year 1957, of which the larger part represented higher prices prevailing in the period. The relative stability in the physical volume of total output in 1958 compares with a gain of 9 p.c.

in 1955, 9 p.c. in 1956, no change in 1957, and a postwar average 1947 to 1958 of 4 p.c. per year. Average civilian employment dropped by 24,000, and the number of persons without jobs seeking work rose to 6.3 p.c. of the civilian labour force compared with 4.3 p.c. in 1957, and 3.1 p.c. in 1956.

The highest unemployment among the insured labour force was recorded in March 1958 when there were 869,300 persons on benefit or seeking benefit or 296,900 more than a year earlier in 1957. The point of lowest unemployment for 1958 was recorded in October with 282,600 active claimants or 56,100 more than in October 1957. For the five years 1954-58, the highest unemployment in each month was recorded in 1958. The data on active claimants is shown below.

Active Claimants on First of Month 1954-58

	1954	1955	1956	1957	1958
Number ¹ (thousands)					
January	451.5	479.3	388.1	398.2	744.2

¹ For monthly information on claimants for regular and seasonal benefit, see: Dominion Bureau of Statistics, Unemployment Insurance Section, *Monthly Statistical Report on the Operation of the Unemployment Insurance Act*.

The insured labour force increased by some 3.3 p.c. from 1957 to a total of 4,106,400 in 1958. The number establishing regular benefit increased by 5,312 from 1957 to 1,091,484. But the number who either were not entitled to ordinary benefit or whose ordinary benefit had been exhausted and who established seasonal benefit increased by 261,706 from the 1956-57 seasonal benefit period. This report does not consider claimants for seasonal benefit in December of 1958, but is concerned only with the seasonal benefit period 1957-58; i.e. December 1957 to June 1958.

Beneficiaries who terminated regular benefit in 1958 drew benefit on the average for 14.3 weeks, or about 2.3 weeks longer than in 1957. The average

payment for ordinary benefit increased to \$313.87 in 1957 from \$256.26 in the previous year; an increase of 22.5 p.c. The increase in the actual duration of benefit was accompanied by a sharp rise in the number of claimants who exhausted their ordinary benefit from 229,952 in 1957 to 363,348 in 1958. The exhaustion percentage rate advanced from 25.8 to 32.4 p.c.

Seasonal benefit claimants drew benefit on the average for about 11.2 weeks, or about 4.1 weeks longer than in the mid-winter months of 1956-57. The average payment for seasonal benefit rose from \$141.86 in 1957 to \$233.37, an increase of 64.5 p.c. The exhaustion percentage rate for seasonal benefit was 44.2 p.c.

APPENDIX

SPECIMEN FORMS

The following forms illustrate the clearance of a worker's annual renewal of his insurance book, establishment of benefit entitlement and history of his benefit period, and the tabulation of statistical data presented in this report. They are as follows:

1. Punch card for insured population.
2. Punch card for benefit data.
3. U.I.C. 417 (Computation of Benefit).
4. U.I.C. 485 (Unemployment Register).

NOTICE

Following are other publications based upon statistical data in the field of unemployment insurance:

- 73-001 Statistical Report on the Operation of the Unemployment Insurance Act—Monthly—Price: \$2.00 a year.**

(Estimates of the insured population; claims filed, claimants on the live unemployment register on last working day of month; disposition of claims; claimants not entitled to benefit; weeks and amount of benefit for the month; estimates of beneficiaries; similar data on seasonal benefit claims, period December to May)

- 73-501 Employment under the Unemployment Insurance Act, 1952—Reference Paper 61 (Part 1)—Price: 25 cents.**

(Distribution of contributors by contribution classes; duration of contributory employment; age group and sex; average weeks contributed separately for new entrants and renewals)

- 73-502 Employment Under the Unemployment Insurance Act, 1954—Reference Paper 61 (Part 2)—Price: 50 cents.**

(Historical data on contributors since inception of the Act; classified by earnings, age, sex, and duration of contributory employment; numerous cross-classification; textual resumé of Act and of sampling procedure)

- 73-503 Unemployment Insurance Claims 1946-55—Reference Paper 78—Price: 50 cents.**

(Historical data on claims filed; claimants with unemployment register in the live file and of benefit payments with data on disposition of claims for 1955; historical data on monthly basis and annual basis for provinces. Appendices contain changes in Act during period)

- 73-504 Statistical Report on the Operation of the Unemployment Insurance Act 1954-58 (Supplement)—Price: 75 cents.**

(Monthly data for Canada and annual data for provinces on regular and seasonal benefit integrated; similar data for seasonal benefit only; appendices on terms, summary of Act, fishing benefit, supplemental unemployment benefit plans, schedules of contribution and benefit rates with amendments; administrative procedures and schedules)

- 11-003 Canadian Statistical Review—Monthly—Price: \$5.00 a year.**

(Includes statistics for claimants on live unemployment register, claims filed, estimate of beneficiaries, weeks of benefit, contributions to the Fund, total revenue of Fund, balance in Fund, registrations for employment and unfilled vacancies with National Employment Service)

- L12-1 The Labour Gazette—Monthly—Price: \$2.00 a year.**

(Includes decisions of the umpire; some data from first noted publication 73-001; unfilled vacancies with National Employment Service by industry and sex, occupation and sex; registrations for employment by occupation and sex; unfilled vacancies and registrations for employment by local office; placements by NES)

- LU1-59 Annual Report of the Unemployment Insurance Commission—Price: 25 cents.**

Inquiries regarding the first six reports should be directed to the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa. Inquiries regarding the other two publications should be directed to the Editor, Labour Gazette and the Unemployment Insurance Commission; subscriptions should be directed to the Circulation Manager, Labour Gazette and the Queen's Printer.

EIGHTEENTH

ANNUAL REPORT ON BENEFIT PERIODS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year, 1959

This is the final statistical report dealing with benefit periods established and terminated during the calendar year 1959 for regular benefit and in the interval from December 1, 1958 to May 16, 1959 for seasonal benefit. The data are based upon tabulations of claimant forms supplied by the Unemployment Insurance Commission.

The material is arranged in accordance with the subject matter covered. The summary tables following the charts show the year's highlights in a comparative statement covering a five year period along with percentage distributions of persons covered and of claimants establishing benefit and average duration of significant groups of claimants. The detailed tables are concerned first with persons covered by insurance, then with claimants establishing and terminating regular benefit, and finally with claimants establishing and terminating seasonal benefit.

The report answers such questions as the following: How many males are covered by insurance,

how many females? What is the age distribution of all workers covered? What is the distribution of the insured by province, by industry, by occupation? How many of those covered are married women? Who establishes regular or seasonal benefit? What is the distribution by sex, province, marital status, dependency position, age, industry and occupation, weekly rate authorized, duration authorized and paid? What proportion of claimants establish more than one regular benefit period in a year? How long is benefit authorized on the average? How many exhaust all their benefit rights in a benefit period? How do males and females compare in this respect? How do weeks of benefit paid differ on the average for each province, age group, industrial group, for males and females? Do claimants collect the maximum number of benefit cheques possible? How do weeks authorized compare with weeks paid? If the claimants in Ontario are ranked by benefit paid, what proportion of the total benefit paid in the province goes to the top 10 per cent of claimants?

The Insured Population

Insurable Employment

All persons employed in Canada in wage earning employment under a contract of service were insurable in 1959 unless specifically excepted. Exceptions broadly included those working in agriculture; hunting and trapping; private domestic service; teaching; medical, nursing, technical and domestic staff in hospitals or charitable institutions not carried on for gain, unless insured under arrangements with the institution; private duty nursing; members of the armed forces; police forces, unless insured under arrangements with the municipalities and provinces; permanent employees with the federal government or a municipal authority except in municipal public utilities; employment in provincial public service, unless insured under arrangements with the individual provinces; persons paid by commission, such as insurance, real estate and securities salesmen; workers paid on other than hourly, daily or piece rates and earning more than \$4,800 (changed to \$5,460 on September 27th) a year, unless election is made to continue insurance. There is no age limit or means test applied for unemployment insurance.

Coverage was extended to any person engaged in commercial fishing on April 1, 1957 notwithstanding that such a person may not be an employee. The "employer", responsible for making contributions on the fisherman's behalf and for keeping records is the actual employer, if he is not a member of the crew; the buyer, if the actual employer is a member of the crew and he or one of the crew sells the catch to the buyer on a face-to-face basis in Canada; and, otherwise, the actual employer or head fisherman or agent acting for the fishermen.

This brief summary of insurance coverage is intended as an aid to those using the tables in this report and should not be considered exhaustive. Reference should be made to the Unemployment Insurance Act 1955 and the regulations passed by Order-in-Council under the authority of that statute for an authoritative statement of coverage. Additional information regarding changes taking place over the year is published in the monthly Statistical Report on the Operation of the Unemployment Insurance Act and the Annual Report of the Unemployment Insurance Commission.

Tables 1 to 5

The data on the persons covered in Tables 1 to 5 are obtained from returns in connection with the renewal of insurance books and contribution cards at June 1st together with new entrants in June. Included in the figures are those who were employed in insurable employment and whose books or cards were therefore renewed through employers, as well as those on claim whose books were renewed at their first visit to a local office after June 1st. As indicated in the headnote to the tables, the data are based upon a 10 p.c. sample of returns (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers are subject to a relatively large sampling variation.

Data on the insured population provide a base to which the figures on benefit periods established and terminated can be related. Table 1 which distributes persons by sex, age and industry is comparable with Table 25 for regular benefit periods terminated. Similarly, Table 2 may be compared with Tables 12 and 24; Table 3 with Tables 14 and 23; Table 4 with Tables 6, 19 and 36; while Table 5 is related to Tables 9, 20, and 37. However, the incidence of benefit periods or benefit weeks paid determined from these tables should be used with caution. The occupations and industries recorded in Tables 1 to 3 are those in which insured persons were engaged at June 1st, whereas those indicated in Tables 12, 14, 23, 24, 25, 34 and 40 relate to the last job held by each claimant at the time of his claim. Thus, each must be taken as approximating the "usual" employment characteristic of the group covered and it cannot be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the last job recorded. Nevertheless, comparison of provincial, occupational, industrial, marital status and age distributions of the insured when compared with those of persons establishing benefit periods and of benefit weeks paid show significant concentrations connected with known shifts in employment.

Table 1 distributes the insured by sex, age and industry. Teenagers accounted for 7.9 p.c.; those 20 to 24 years, 15.6 p.c.; those 25 to 44 years, 48.7 p.c.; those 45 to 64 years, 24.7 p.c.; and those over 64 years, some 3.1 p.c. Factory workers comprised 35.8 p.c. of all insured. While women made up 27.8 p.c. of all insured, they accounted for higher proportions of younger insured and lower proportions of older insured persons. The proportion of insured

employed who were women varied greatly from one industry to another, from a high of 71.1 p.c. in the clothing industry to a low of 1.2 p.c. in fishing, hunting and trapping. Factory employment accounted for 35.8 p.c. of all insured, and 50.6 p.c. of those 25 to 44 years but only 2.1 p.c. of those over 65 years.

Table 2 groups the insured by sex, province and industry. The Atlantic region accounted for 8.5 p.c.; Quebec for 28.1 p.c.; Ontario for 40.2 p.c.; the Prairies for 13.6 p.c.; and British Columbia for 9.6 p.c. Women formed 27.8 p.c. of the insured nationally but varied provincially from 29.9 p.c. in Ontario to 14.3 p.c. in Newfoundland. Factory workers varied in importance provincially from 43.8 p.c. in Quebec to 13.2 p.c. in Saskatchewan.

Table 3 is concerned with the occupational attachment of the insured by sex and province. Managerial and professional workers comprised 3.8 p.c. of the insured; clerical and sales workers; i.e. clerical, commercial and financial occupations, 27.1 p.c.; unskilled and service workers, 25.3 p.c.; and others, skilled and semi-skilled workers, 43.8 p.c. The proportion of insured who were women varied from a high of 64.4 p.c. for clerical to a low of 0.1 p.c. for electric light and power workers. Manufacturing and mechanical occupations accounted for 21.4 p.c. of the insured (23.1 p.c. of men and 17.0 p.c. of women) nationally but as much as 24.8 p.c. in Quebec and 24.1 p.c. in Ontario to as little as 10.1 p.c. in Prince Edward Island.

Table 4 shows the marital status of the insured by sex and province. Married women comprised 14.3 p.c. of the insured nationally, but varied by province from a high of 16.9 p.c. in Ontario to a low of 5.2 p.c. in Newfoundland, and 49.0 p.c. of the female insured.

Table 5 provides the age composition of the insured by sex and province. The proportion of teenagers in the insured population varied from 10.5 p.c. in Prince Edward Island to 5.9 p.c. in British Columbia; the proportion of those 20 to 24 years from 19.1 p.c. in Saskatchewan to 13.5 p.c. in British Columbia; the proportion of those 25 to 44 years from 51.0 p.c. in Alberta to 41.5 p.c. in Prince Edward Island; the proportion of those 45 to 64 years from 28.7 p.c. in Nova Scotia to 22.4 p.c. in Alberta; and the proportion over 64 years from 5.0 p.c. in Prince Edward Island to 2.1 p.c. in Newfoundland.

Regular Benefit Periods Established and Terminated**Qualifying Conditions**

Tables 6 to 15 are concerned with regular benefit periods established in 1959 and Tables 16 to 28 with regular benefit periods terminated in 1959 (whether established in 1958 or 1959). A regular benefit period is a period of 52 weeks starting with, and including, the week in which it is established. It runs for 52 weeks from the date of its establish-

ment unless termination comes earlier by exhaustion of the amount of benefit authorized. Tables based on benefit periods established indicate the volume of claims from insured persons with some recent attachment to insured employment who are entitled to unemployment compensation and provide information on the personal characteristics of such claimants. The tables based on benefit periods terminated provide figures on benefit paid as well as the

number of cases so that the total number of weeks paid and weeks paid per entitled claimant can be secured for any significant group.

To establish a regular benefit period in 1959 a claimant had to satisfy these conditions when his initial claim was made:

1. He must have made at least 30 weekly contributions in two years preceding the date of claim;
2. He must have made 8 of these since the start of his last preceding **regular** benefit period or within the year preceding the date of claim, whichever was the **shorter** period;
3. He must have made 24 of the 30 since the beginning of the last preceding benefit period, either **regular or seasonal**, or in the year preceding the date of claim, whichever was the **longer** period.

These qualifying periods could be prolonged up to four years by spells of sickness, non-insurable employment, self-employment, stoppage of work owing to a labour dispute, or (after September 27th) time spent under sentence in a prison.

Having established his right to insurance benefit, a claimant is usually entitled to receive payment for any week during which he finds he is unemployed, but he is disqualified for every day for which he fails to prove he is (a) capable of work, subject to an exception for illness; (b) available for work, subject to an exception for illness; and (c) unable to obtain suitable employment. Benefit can be paid during spells of incapacity due to illness,

injury or quarantine, if he was entitled to receive benefit at the time this occurred and if it was not because of the incapacity that he stopped working. It is considered that a woman during an interval, generally six weeks, prior to and following childbirth is not available for work. As to "suitable employment", a claimant should be offered a job in his usual occupation if a vacancy exists. He should then be offered any other job which is available after a reasonable interval. If he refuses an offer of any employment, disqualification for benefit depends on whether there was a stoppage of work or a labour dispute at his plant; if the employment offered was in his usual occupation, whether the rate of earnings was lower or conditions were less favourable than those prevailing; if before a reasonable interval has elapsed, or after, and the employment was in other than his usual occupation, whether the rate of earnings was lower or conditions less favourable than those prevailing; and whether acceptance would affect the claimant's rights to membership in, or to refrain from membership in, an association of workers.

Rate and Duration

The rate of benefit authorized to the claimant who had made the required premiums; i.e. passed either the 30-weeks test and the 8-weeks test; or had passed the 30-8-24 weeks tests in the case of a subsequent benefit period, was based on the average of his most recent 30 weekly contributions in the 104 weeks preceding the starting date of his benefit period. The contribution and benefit classes are shown below.

Rates of Contribution by Employee¹

Range of weekly earnings	Rates prior to 27 Sept. 1959	Rates effective 27 Sept. 1959
Under \$908 ²	.10 ²
\$ 9 and under \$1516	.20
15 " " 2124	.30
21 " " 2730	.38
27 " " 3336	.46
33 " " 3942	.54
39 " " 4548	.60
45 " " 5152	.66
51 " " 5756	.72
57 " " 6360 ³	.78
63 " " 6960 ³	.86
69 and over60 ³	.94

¹ The employer pays a like amount.

² A half stamp except in the case of fishermen.

³ A 60-cent contribution on earnings of \$57 upwards.

Contribution and Benefit Rates

Weekly earnings	Weekly contributions		Weekly rate of benefit		Prior to September 27, 1959			Effective September 27, 1959

69.00 and over94	27	36	—	—	—	14	18	.90 and over

¹ When earnings are less than \$9, the contribution prior to September 27, 1959 was 8 cents. This was changed to 10 cents. This is counted as a half-week for benefit purposes.

The schedule of contribution rates was extended with the addition of two new higher classes by 1959 amendments to the Act so as to provide a more realistic benefit rate for employees in the upper earnings range in view of rises in wage levels, and with an increase in other classes to provide additional revenue to the Unemployment Insurance Fund. This revised schedule made no changes in the proportionate share of contributions paid by employees (5/12), employers (5/12), and Government (2/12).

Prior to September 27th, if a claimant had 30 weekly contributions amounting to \$17.40 his weekly benefit rate would be \$30 where he had a dependent, and \$23 if he had not; and, in addition, he could earn \$13 in casual, subsidiary or short-time earnings. With the amendments, he would require 30 weekly contributions of \$22.50 for benefit of \$30 (dependency) or \$23 (single), although he could earn, in addition, \$15 (dependency) or \$12 (single) in casual earnings. However, with more contributions it was possible to improve his position with the two new benefit classes.

Under the old 1940 Act, prior to its 1955 revision, when contributions and benefit were based on days instead of weeks, a claimant's rate of benefit was not so quickly affected by a drop in his earnings as was later the case. On the other hand, the revised benefit provisions allowed a claimant to requalify for a new benefit period more quickly when he was working less than the full working week. To minimize the effect of a reduction in earnings

and contributions, the 1959 amendments provided that where successive **regular** benefit periods occurred within two years, the rate of benefit during the new **regular** benefit period would not drop more than one class below the last regular benefit period in which benefit was paid.

The new schedule of allowable earnings has different values for claimants with and without dependents. The old schedule had the same values.

The benefit rate to which the claimant is entitled, i.e. single or dependency, is established at the beginning of each benefit period, but is subject to change during the currency of the benefit period. A claimant with a dependent is either (a) a man with a wife maintained wholly or mainly by him; or (b) a married woman with a husband dependent on her; or (c) a person who maintains wholly or mainly one or more children under 16 years; or (d) a person who maintains a self-contained domestic establishment and supports there a person connected by blood, marriage or adoption.

Prior to September 27th the Act specified **one** week of full benefit for every **two** contribution weeks in the last two years, with a maximum of 36 weeks and a minimum of 15 weeks generally. However, on a subsequent benefit period only contributions made since the start of the previous benefit period, or within the last year, whichever was the longer period, could be counted giving a minimum of 12 weeks.

Before the 1955 revision of the Act, the maximum duration of one benefit period was 52 weeks. In 1955 the maximum was reduced to 36 weeks. The 1959 amendment restored the maximum to 52 weeks. This increase in the maximum duration also applied to benefit periods in existence on September 27th, although established at an earlier date where the original duration was 36 weeks.

The maximum entitlement for a claimant under the 1955 Act prior to its amendment effected September 27, 1959 was \$828 (single) or \$1,080 (dependency), i.e. 36 weeks at \$23 or \$30. However, under Section 121 of this Act, during a transitional period of three years, any claimant who **exhausted** his benefit on his **first** claim from October 2, 1955 was entitled to any excess benefit which he would have received under the 1940 Act had it been in force. This applies only to claimants in this report who prior to October 2, 1958 established their first claim since October 2, 1955 and who drew all their authorized benefit. The maximum entitlement for a claimant under the 1959 amendments is, of course, \$1,404 (single) or \$1,872 (dependency).

Under the provisions regarding allowable earnings from part-time employment while on claim, a claimant with earnings over the prescribed amount will find his benefit cancelled or reduced to the extent of the excess.

Benefit not Paid

Benefit was not paid in 1959 in the following cases:

1. At the start of the benefit period for a waiting period equivalent to a week of full benefit. When one benefit period terminates and a claimant immediately requalifies for benefit, the waiting period could be waived if certain other conditions were met. The waiting period provision, like a deductible claim on an automobile or personal property insurance policy, saves expenses to the Fund by eliminating claims for very short periods of unemployment and the investigation of the genuineness of such short spells.
2. For a period not over six weeks: (a) if he lost his employment by his own industrial misconduct, or if he involuntarily left it without just cause; (b) if he had, without good cause, refused or failed to apply for suitable employment or failed to accept it, or neglected to avail himself of an opportunity for such employment; (c) if he had, without good cause, failed to attend an instruction or training course under certain circumstances, or failed to carry out a written direction given him by the Commission to assist him in finding suitable employment.
3. For any week in which he worked the full working week in the place where he was employed.
4. For any week in which the only unemployed days were Sunday, a recognized holiday of one day, the day before or the day after such holiday.

5. If he lost his employment by reason of a stoppage of work resulting from a labour dispute at the plant where he was employed, unless he proved he was not participating in, financing or directly interested in such labour dispute and did not belong to a grade or class of workers who were. This disqualification lasted for the duration of the stoppage of work.
6. If he failed to prove he was unemployed, capable of and available for work, and unable to obtain suitable employment. The claimant had to sign a written statement affirming this each week at the counter of the local office on U.I.C. Form 489 (Claimant's Weekly Report) or if reporting by mail on U.I.C. Form 497 (Postal Claimant's Report).
7. If he ceased work because of illness, injury or quarantine, he was disqualified for the duration of his incapacity or until he proved he was capable of doing some other kind of work.
8. While he was an inmate of a prison or institution supported wholly or partly out of public funds, and while he was a resident out of Canada.

Benefit was reduced by earnings while on claim such as (a) wages for part-time work; (b) holiday pay, including payments through vacation stamps; (c) money received at or after separation in consideration of returning to the same employer after a seasonal layoff, as retirement leave credits, in place of notice, bonuses or gratuities; (d) room or board when part of wages; (e) Workmen's Compensation for total or partial temporary disability; (f) money from services for any person or a contract of employment; and (g) reinstatement pay for wrongful dismissal.

Tables 6 to 15

Table 6 distributes persons establishing regular benefit by sex, province, and marital status. The table shows the Atlantic region accounted for 10.6 p.c. of claimants; Quebec for 31.7 p.c.; Ontario for 35.5 p.c.; the Prairies for 11.3 p.c.; and British Columbia for 10.9 p.c. Women comprised 24.2 p.c. of claimants nationally but varied in importance provincially from 28.0 p.c. and 27.1 p.c. in Manitoba and Ontario to 9.7 p.c. in Newfoundland. Married women made up 15.1 p.c. of claimants nationally but as much as 20.4 p.c. and 19.2 p.c. in Manitoba and Ontario and as few as 5.0 p.c. in Newfoundland. Married women who were 49.0 p.c. of insured females comprised 62.4 p.c. of female claimants establishing regular benefit.

Table 7 shows claimants by sex, province and number of periods established. The proportion of all claimants establishing more than one regular benefit period in 1959 was 1.8 p.c. (2.1 p.c. for men and 0.8 p.c. for women) nationally and varied by province from a high of 3.4 p.c. for New Brunswick to a low of 1.1 p.c. for Alberta.

Table 8 is concerned with the dependency position of claimants establishing regular benefit by sex and province. Some 47.0 p.c. of claimants in 1959 had dependents and were authorized the higher

benefit rates (47.3 p.c. in 1958). The percentage of claimants with dependents was 60.0 p.c. for men, but only 6.1 p.c. for women. The rate varied by province from 69.0 p.c. in Newfoundland to 41.9 p.c. in Manitoba.

Table 9 provides an age distribution of claimants by sex and province. Teenagers comprised 6.9 p.c. of claimants; those 20 to 24 years, some 17.6 p.c.; those 25 to 44 years, 48.5 p.c.; those 45 to 64 years, 23.1 p.c.; and those over 64, some 3.9 p.c. Women comprised 24.2 p.c. of all claimants, but accounted for a higher proportion of those under 25 years of age. Among the provinces, the proportion of teenagers varied from 9.8 p.c. in Prince Edward Island to 4.7 p.c. in Alberta; of those 20 to 24 years, from 21.9 p.c. in Saskatchewan to 15.2 p.c. in Newfoundland; of those 25 to 44 years, from 50.0 p.c. in Ontario to 42.0 p.c. in Prince Edward Island; of those 45 to 64 years, from 28.5 p.c. in Nova Scotia to 20.2 p.c. in Quebec; and of those over 64, from 5.8 p.c. in Manitoba to 2.2 p.c. in Newfoundland.

Table 10 shows the average benefit weeks authorized entitled claimants by sex and province. The overall average was 26.4 weeks in 1959 (26.2 weeks in 1958). The average duration authorized was 25.5 weeks for men and 29.2 weeks for women. Among provinces, the average duration ranged from 27.8 weeks in Ontario to 22.4 weeks in New Brunswick.

Table 11 is a four-way breakdown of authorized regular claimants by sex, province, age and marital status. The median ages were: for single claimants, 23.9 years (24.3 for men, 22.5 for women); for married claimants, 37.6 years (39.4 for men, 32.1 for women); and for other claimants, 49.6 years (51.4 for men, 48.3 for women).

Table 12 classifies persons by sex, province and industry. Factory workers accounted for 33.8 p.c. (31.1 p.c. of men and 42.2 p.c. for women) of claimants nationally but as much as 42.9 p.c. in Ontario and as little as 12.3 p.c. in Saskatchewan. Women accounted for 74.1 p.c. of communication workers establishing but only 1.1 p.c. of claimants attached to general contracting.

Table 13 is a four-way classification of persons establishing regular benefit by sex, dependency position, weekly rate of benefit authorized and duration authorized. Compare duration authorized by sex. The median duration was 23.3 weeks (men, 21.9 weeks; women, 30.1 weeks). Then, compare the weekly rate authorized by sex. Women comprised 77.8 p.c. of claimants at the rate of \$6.00 weekly but just 1.4 p.c. of those at \$36.00 weekly. The median rate authorized was \$22.00 (men, \$25.30; women, \$14.40). Next, compare dependency position and weekly rate authorized. The median rate for claimants without dependents was \$17.45 and for claimants with dependents was \$28.08. Now, compare duration authorized with weekly rate authorized. These authorized 36 or more weeks accounted for 30.9 p.c. of all claimants but higher percentages for claimants at rates of \$15, \$19, \$23, \$30, and \$33.

Table 14 furnishes an occupational distribution of claimants establishing regular benefit by sex and province. Managerial and professional workers accounted for 1.8 p.c. of claimants; clerical and sales workers for 15.8 p.c.; unskilled and service workers, 29.4 p.c.; and others, skilled and semi-skilled workers, for 53.0 p.c. Women accounted for as much as 69.8 p.c. of clerical workers who were claimants and as few as 0.2 p.c. of logging and mining workers establishing. Manufacturing and mechanical workers accounted for 21.2 p.c. (men, 19.4 p.c.; women, 26.9 p.c.) of claimants nationally but a high of 27.7 p.c. in Ontario and a low of 6.9 p.c. in Saskatchewan.

Table 15 shows a distribution of claimants by weeks authorized regular benefit by sex and province. The median weeks authorized were: Newfoundland 19.4 weeks; Prince Edward Island, 17.9 weeks; Nova Scotia, 22.4 weeks; New Brunswick, 18.5 weeks; Quebec, 22.1 weeks; Ontario, 25.5 weeks; Manitoba, 22.7 weeks; Saskatchewan, 21.2 weeks; Alberta, 23.5 weeks; and British Columbia, 23.6 weeks.

Tables 16 to 28

Table 16 shows the number of benefit periods terminated together with that portion terminated by exhaustion, classified by sex and age of claimant. Reflecting in part the economic recovery of 1959 and in part the longer duration authorized the exhaustion rate was 29.3 p.c. (32.4 p.c. in 1958). The rate was slightly higher for women (30.8 p.c.) than for men (28.8 p.c.) and varied from 58.6 p.c. for claimants over 65 years to 27.7 p.c. for the 25 to 34 year olds. The average duration for exhaustees was 21.00 weeks ranging from 27.73 weeks for those over 64 years to 19.28 weeks for teenagers.

Table 17 distributes terminations, weeks paid and amount paid by sex and province. Benefit paid averaged \$298.90 per claimant (men, \$314.67 and women, \$244.77), varying provincially from \$345.03 for Prince Edward Island claimants to \$270.69 for Alberta claimants. The overall average duration paid was 13.54 weeks (men, 12.95 weeks; women 15.58 weeks), varying by provinces from 15.38 weeks in Prince Edward Island to 12.12 weeks in Alberta.

Table 18 shows terminations and weeks paid by sex, age, marital status, and cause of termination. The overall exhaustion rate was 29.3 p.c. For the 42 basic groups (two sexes, three marital status classes, seven age groups) the percentage of exhaustions averaged from 60.7 p.c. to 18.3 p.c. By sex, the rates were 30.8 for women and 28.8 for men. By marital status, the rates were 28.0 for single claimants, 29.3 for married and 37.4 for other claimants. By age, the rates averaged from 58.6 to 24.7 p.c. Looking at sex and age, the excess of the female over the male rate held for four age groups but not for the two youngest and the oldest. Looking at sex and marital status, the excess of the female over the male rate held only for married claimants. Looking at age and marital status, differences between age groups were about the same for each group.

Table 19 distributes terminations and weeks paid by sex, province and marital status. Married women averaged 17.27 weeks compared to 12.09 weeks for single women. By contrast, duration for single men (13.00 weeks) was almost the same as for married men (12.75 weeks).

Table 20 shows terminations and weeks paid by sex, province and age. Average duration was 12.95 weeks for all males compared to 22.30 weeks for males 65 and over and 13.03 weeks for teenagers. This reflects the relative difference in authorization plus in the case of older workers difficulty in regaining employment.

Table 21 distributes terminations and weeks paid by sex, province and cause of termination. The exhaustion rate reflecting differences in authorizations and opportunities for employment varied by provinces from 51.0 p.c. in Prince Edward Island to 22.3 p.c. in Alberta. Duration averaged 10.46 weeks for termination by lapsing and 21.00 weeks for termination by exhaustion.

Table 22 gives terminations and weeks paid by sex, province, dependency position and weekly rate authorized. Claimants for single benefit averaged 14.09 weeks, while those for dependency benefit averaged, 12.96 weeks. Average duration of benefit varied for single benefit from 15.55 weeks at \$6.00 to 13.16 weeks at \$23, and for dependency benefit from 17.17 weeks at \$12 to 12.12 weeks at \$30.

Table 23 groups terminations and weeks paid by sex, province and occupation. Average duration varied among occupations from 18.97 weeks for claimants attached to protective service work containing a high proportion of older men employed

as janitors and watchmen to 11.60 weeks for manufacturing work in which many young workers get their first job.

Table 24 is a companion table to table 23 presenting the same information by industry.

Table 25 shows terminations and weeks paid by sex, age and industry.

Table 26 is concerned with a distribution of terminations by sex, weeks authorized and weeks paid. The proportion of terminations on which the authorization was 35 or more benefit weeks was 36.2 p.c. (men, 33.6 p.c.; women, 44.9 p.c.). However, the proportion paid this long was only 6.3 p.c. (men, 4.6 p.c.; women 12.1 p.c.). Some 6.5 p.c. of entitled claimants (men, 5.9 p.c.; women, 8.5 p.c.) drew no benefit. The median duration authorized was 24.94 weeks (men, 23.74 weeks; women, 31.20 weeks). The median duration paid was 12.99 weeks (men, 12.79 weeks; women, 14.16 weeks).

Table 27 gives terminations classified by sex, amount authorized and amount paid. The median, for entitlement (and payment) was: \$532 (\$265). For men, it was \$580 (\$286). For women, it was \$428 (\$193).

Table 28 shows the distribution of terminations by weeks paid for sex and province. In 1959 the highest tenth of beneficiaries (before adjusting for those who drew no benefit) obtained about 27.0 p.c. of total benefit paid on regular benefit periods terminated. The figure after the adjustment was 25.6 p.c.

Percentage of Regular Benefit Paid on Terminations Received by Each Tenth of Claimants when Ranked by Size of Benefit

Claimants ranked according to size of benefit paid	Money benefit before adjusting for "no pays"	Money benefit after adjusting for "no pays"
Highest tenth	27.0	25.6
Second	17.2	16.5
Third	15.6	15.0
Fourth	11.4	11.3
Fifth	9.6	9.5
Sixth	7.9	7.9
Seventh	5.5	6.0
Eighth	3.8	4.5
Ninth	1.7	2.9
Lowest tenth	0.3	0.8

The top 5 p.c. of beneficiaries fared best in Ontario followed by Manitoba and worst in Prince Edward Island and Newfoundland. However, the

bottom half did best in the latter provinces and worst in the former provinces.

Estimated Percentage Shares of Various Benefit Groups
(A-Including "no pays", B-Excluding "no pays")

Benefit group	Newfoundland		Prince Edward Island		Nova Scotia		New Brunswick		Quebec	
	A	B	A	B	A	B	A	B	A	B
Top 5 per cent	13.6	13.4	13.3	13.1	15.1	14.6	14.0	13.6	14.5	14.0
Next 5 per cent	9.7	9.5	9.0	8.9	10.7	10.4	9.6	9.4	10.4	10.2

Seasonal Benefit Periods Established and Terminated

Qualifying Conditions

A seasonal benefit period may be established only in the interval from the start of the week in which December 1st falls to the end of the week in which the next May 15 falls, and only for a claimant unable to pass the tests for regular benefit. A claimant can establish but one seasonal benefit period in the interval. There are two classes of benefit periods: Class A with easier tests than those for regular benefit; and Class B, an extension of benefit to certain regular benefit claimants.

To establish seasonal benefit in the winter of 1958-59, a claimant had to satisfy these conditions when his initial claim was made:

Group A — Seasonal Benefit

1. He must have been unable to qualify for regular benefit;
2. He must have made at least 15 weekly contributions since the preceding March 31st;
3. His claim must have been submitted in the period from December 1 to May 15.

Group B — Seasonal Benefit

1. He must have been unable to qualify for regular benefit and seasonal A;
2. He must have had a regular benefit period terminate since the previous May 15.
3. His claim must have been submitted in the interval from December 1 to May 15.

Rate and Duration

The weekly **rate** of benefit was determined as follows:

Group A

The average of all the claimant's weekly contributions made since the previous March 31st;

Group B

The same rate (subject to redetermination of dependency or single position) as the claimant had in his regular benefit period terminated since the previous May 15.

The **duration** of seasonal benefit was determined as follows:

Group A

1. Five weeks benefit for every six contribution weeks made since the previous March 31st, or
2. The number of possible benefit weeks (exclusive of the waiting week) in the period from the date of claim to May 15, **whichever is lesser.**

Group B

1. The number of weeks in the immediately previous regular benefit period, or
2. The number of possible benefit weeks (exclusive of the waiting week) in the period from the date of claim to May 15, **whichever is lesser.**

The minimum duration of seasonal benefit in the 1958-59 winter was 13 weeks for Group A, and 12 weeks for Group B unless the interval between the rate of claim and May 15 was less. For both groups, the maximum duration was 24 weeks.

After March 31 no seasonal benefit periods were established under Group A. For claimants eligible to have the waiting week waived, the starting date for a seasonal B period could be as late as May 10.

Seasonal benefit periods established from May 18, 1958 to June 28, 1958 under "An Act for the Temporary Extension of Seasonal Benefit Periods under the Unemployment Insurance Act" did not

affect qualification for seasonal benefit during the 1958-59 winter, although they did affect qualifications for regular benefit periods.

All of the provisions of the Act apply to seasonal benefit with the exception of these sections pertaining to regular benefit; namely, qualifying conditions, extension of qualifying periods, rate and duration. However, in the case of fishermen the requirements covering the determination of the "full working week" and "availability" are waived during the seasonal benefit period. Payment of benefit to a fisherman is limited to unemployment during the seasonal benefit period except where he is engaged in fishing the year round, he has no control of his employment and unemployment, and has lost his job because of a shortage of work. Most fishermen would be expected to be claimants under Group A seasonal benefit.

Tables 29 to 42

Table 29 gives the number of claimants establishing seasonal benefit periods and the amount of benefit paid for the five periods terminating 1955-59.

Table 30 distributes persons, weeks paid and amount paid by sex, group and province. The table shows the Atlantic area with only 8.5 p.c. of the insured population accounted for 20.8 p.c. of entitled claimants while Ontario with 40.2 p.c. of the insured had only 25.2 p.c. of seasonal claimants establishing benefit. Women comprised 20.1 p.c. of claimants (14.9 p.c. of SBA, 27.2 p.c. of SBB). The proportion of claimants who were women varied from 29.2 p.c. in Ontario to 4.2 p.c. in Newfoundland. Some 61.4 p.c. of men on seasonal benefit and 42.6 p.c. of women were A benefit claimants. Some 57.6 p.c. of claimants established A benefit. This proportion ranged from 83.5 p.c. in Prince Edward Island to 47.7 p.c. in Ontario.

The overall average duration of paid benefit was 10.52 weeks (men, 10.51 weeks; women, 10.57 weeks; A claimants, 11.18 weeks; B claimants 9.62 weeks). Among provinces, duration averaged from 12.67 weeks in Prince Edward Island to 9.57 weeks in Alberta. The benefit paid averaged \$221.43 (men, \$237.62; women, \$157.08; A claimants, \$234.32; B claimants, \$203.90). Among provinces benefit for entitled claimants averaged from \$258.88 in Newfoundland to \$207.33 in Manitoba.

Table 31 classifies persons and weeks paid by sex, group and marital status. Married women accounted for 13.7 p.c. of all claimants, and averaged 10.91 weeks of benefit (A claimants, 10.68 weeks; B claimants, 11.06 weeks).

Table 32 is concerned with the age distribution of persons and weeks paid by sex and group. Teenagers comprised 9.9 p.c. of claimants; 20 to 24 year olds, 16.9 p.c.; 25 to 44 year olds, 42.3 p.c.; 45 to 64 years olds, 24.7 p.c.; and those over 64 years, 6.2 p.c. Women accounted for 25.7 p.c. of teenage claimants but as little as 6.2 p.c. of claimants over 64 years. Almost three quarters of all seasonal claimants under the age of 20 were found

in Group A illustrating the fact that many in this age group were new entrants into insurable employment.

Table 33 presents claimants and weeks paid by sex, group, dependency position and weekly rate of benefit authorized. Single claimants comprised 53.7 p.c. of all claimants. Those authorized the top benefit rate of \$30 weekly made up 13.0 p.c. of all claimants. The proportion of women with single benefit was very high at 93.4 p.c. The proportion of A claimants with single benefit was 51.7 p.c. compared with 56.4 p.c. of B claimants. The top benefit rate of \$30 accounted for 16.2 p.c. of men but only 0.4 p.c. of women, for 10.9 p.c. of A claimants and 15.8 p.c. of B claimants. Duration at 10.37 weeks for single benefit claimants averaged slightly less than the 10.69 weeks for dependency benefit claimants.

Table 34 distributes persons and weeks paid by sex, group and occupational attachment. Managerial and professional workers covered 10 p.c. of claimants; clerical and sales workers, 12.0 p.c.; unskilled and service workers, 36.8 p.c.; and others, skilled and semi-skilled workers, 50.2 p.c. Manufacturing and mechanical workers accounted for 11.1 p.c. (men, 8.7 p.c.; women, 20.6 p.c.) of all claimants but varied in importance by benefit group for 8.4 p.c. of A claimants and 14.8 p.c. of B claimants. Duration averaged from 14.39 weeks for fishermen to 8.49 weeks for "other" service workers.

Table 35 shows persons establishing seasonal benefit by sex, duration authorized and duration paid. The proportion authorized 18 or more weeks was 24.5 p.c. (men, 23.2 p.c.; women 29.6 p.c.; A claimants, 18.0 p.c.; B claimants 33.3 p.c.). However, the proportion paid this long was only 13.9 p.c. (men, 13.1 p.c.; women, 17.2 p.c.; A claimants, 9.5 p.c.; B claimants, 19.9 p.c.). Some 4.7 p.c. of entitled claimants (men, 4.2 p.c.; women, 7.0 p.c.; A claimants, 3.5 p.c.; B claimants, 6.4 p.c.) drew no benefit. Table 32 showed the relatively higher proportion of older workers among B claimants.

Table 36 classifies claimants and weeks paid by sex, province and marital status. Average duration was 10.91 weeks for married women compared to 9.47 weeks for single women, which is a much smaller differential than noted earlier for regular benefit (see Table 19).

Table 37 gives persons establishing seasonal benefit and weeks paid by sex, province and age. Among the provinces the percentage of teenagers ranged from as much as 12.3 p.c. in New Brunswick to 6.4 p.c. in British Columbia; of 20 to 24 year olds, from 19.9 p.c. in Quebec to 13.7 p.c. in Newfoundland; of 25 to 44 year olds, from 45.9 p.c. in Newfoundland to 37.5 p.c. in Manitoba; of 45 to 64 year olds, from 29.1 p.c. in Manitoba to 21.1 p.c. in Quebec; and of those over 64 years, from 11.4 p.c. in Manitoba to 2.8 p.c. in New Brunswick. Average duration for those over 64 years was 13.20 weeks but varied from 13.72 weeks in Nova Scotia to 11.76 weeks in Saskatchewan.

Table 38 allots persons and weeks paid by sex, province and cause of termination. The figures show 46.0 p.c. of claimants (men, 45.9 p.c.; women, 46.5 p.c.) exhausted their benefit rights. Newfoundland at 70.3 p.c. had the highest exhaustion rate and Alberta at 29.5 p.c. the lowest. Duration averaged 13.54 weeks for exhaustees, ranging from 14.35 weeks in Newfoundland to 12.63 weeks in Manitoba.

Table 39 distributes claimants by sex, dependency position, duration authorized and weekly rate authorized. The median rate authorized was \$16.19 weekly for single benefit claimants and \$26.18 for dependency benefit claimants. The percentage of claimants authorized 20 or more weeks was 14.3 p.c. ranging from 19.6 p.c. at the rate of \$23.00 weekly to 10.1 p.c. at the rate of \$12.00 weekly.

Table 40 is a companion table to Table 34 and classifies persons establishing seasonal benefit and weeks paid by sex, group and industrial attachment.

Table 41 shows persons and weeks paid by sex, age, marital status and cause of termination. The overall exhaustion rate was 46.0 p.c. For the 42 basic groups (two sexes, three marital status and

seven age) the percentages ranged from 100.0 p.c. to 16.6 p.c. By sex, the rates were 46.3 for women and 45.7 for men. By marital status, the rates were 44.8 for single claimants, 46.2 for married claimants and 47.5 for other claimants. By age, the rates ranged from 56.1 p.c. to 42.7 p.c. Looking at sex and age, the excess of the female over the male rate held for six age groups, but not for teenagers. Looking at sex and marital status, the excess of the female over the male rate held only for married claimants.

Table 42 allocates claimants establishing seasonal benefit by sex, province, duration authorized and duration paid.

In the 1958-59 winter the highest tenth of beneficiaries, before adjusting for those who drew no benefit, obtained about 23.4 p.c. of total benefit paid on seasonal benefit periods terminated. The figures after the adjustment was 22.5 p.c.

The top 5 p.c. of beneficiaries fared best in Ontario and worst in Newfoundland. However, the bottom half did best in the latter province and worst in the former province.

Percentage of Seasonal Benefit Paid Received by Each Tenth of Claimants when Ranked by Size of Benefit

Claimants ranked according to size of benefit paid	Money benefit before adjusting for "no pays"	Money benefit after adjusting for "no pays"
Highest tenth.....	23.4	22.5
Second.....	17.6	16.9

Review of Unemployment Insurance Benefit in 1959

The foregoing comments on the detailed tables have been concerned with what the data for 1959 show, with particular reference to the characteristics known to distinguish the different groupings of claimants in this report, such as differences in sex, province, age, etc. Apart from this, something has been written about the requirements for establishing ordinary or special benefit and about instances when benefit is not payable. Some comparisons with earlier years are noted here.

The gross national product, which is a measure of the market value of all goods and services produced in Canada, showed an advance of about 6 p.c. over the year 1958, and with prices higher by about 2 p.c., this represented an increase of some 4 p.c. in the physical volume of output. This change

in the physical volume of total output compares with practically no change in 1957 and 1958, and with a post-war average increase of 4 p.c. per year. Average civilian employment increased by 156,000, and the number of persons without jobs seeking work dropped to 5.6 p.c. of the civilian labour force compared with 6.6 p.c. in 1958, and 4.3 p.c. in 1957.

The highest volume of claimants among the insured labour force was recorded in March when there were 796,000 persons on benefit or seeking benefit, down 73,300 from the same date in 1958. The lowest level of claimants was recorded in October with 201,600 active claimants, some 81,000 less than at the same time in 1958. The figures on active claimants are shown below.

Active Claimants on First of Month 1955-59

Month	1955	1956	1957	1958	1959
Number ¹ (thousands)					
January	479.3	388.1	398.2	744.2	715.0

Average	9.3	7.6	8.7	13.2	11.3

¹ For a summary of 1959 monthly statistics of regular and seasonal benefit combined see: Dominion Bureau of Statistics, Unemployment Insurance Section, *Monthly Statistical Report on the Operation of the Unemployment Insurance Act, February 1960*. Data on active claimants were taken from the monthly reports.

The insured labour force showed little change between 1958 and 1959. The number establishing regular benefit dropped 9.7 p.c. from 1958 to 1,091,484. The number who either were not entitled to ordinary benefit or whose ordinary benefit had been exhausted and who established seasonal

benefit declined by 5.6 p.c. from the 1957-58 seasonal benefit period to 444,310. This report does not consider claimants for seasonal benefit in December of 1959, but is concerned only with the seasonal benefit period 1958-59, i.e. December 1958 to May 1959.

Beneficiaries who terminated regular benefit in 1959 drew benefit on the average for 13.5 weeks, or about 0.8 weeks less than in 1958. The average payment for ordinary benefit dropped to \$298.90 in 1959 from \$313.87 in the previous year, a fall of 4.8 p.c. The fall in the duration of paid benefit was accompanied by a slump in the number of claimants who exhausted their ordinary benefit from 363,348 in 1958 to 306,300 in 1959. The exhaustion percentage rate slipped from 32.4 to 29.3 p.c.

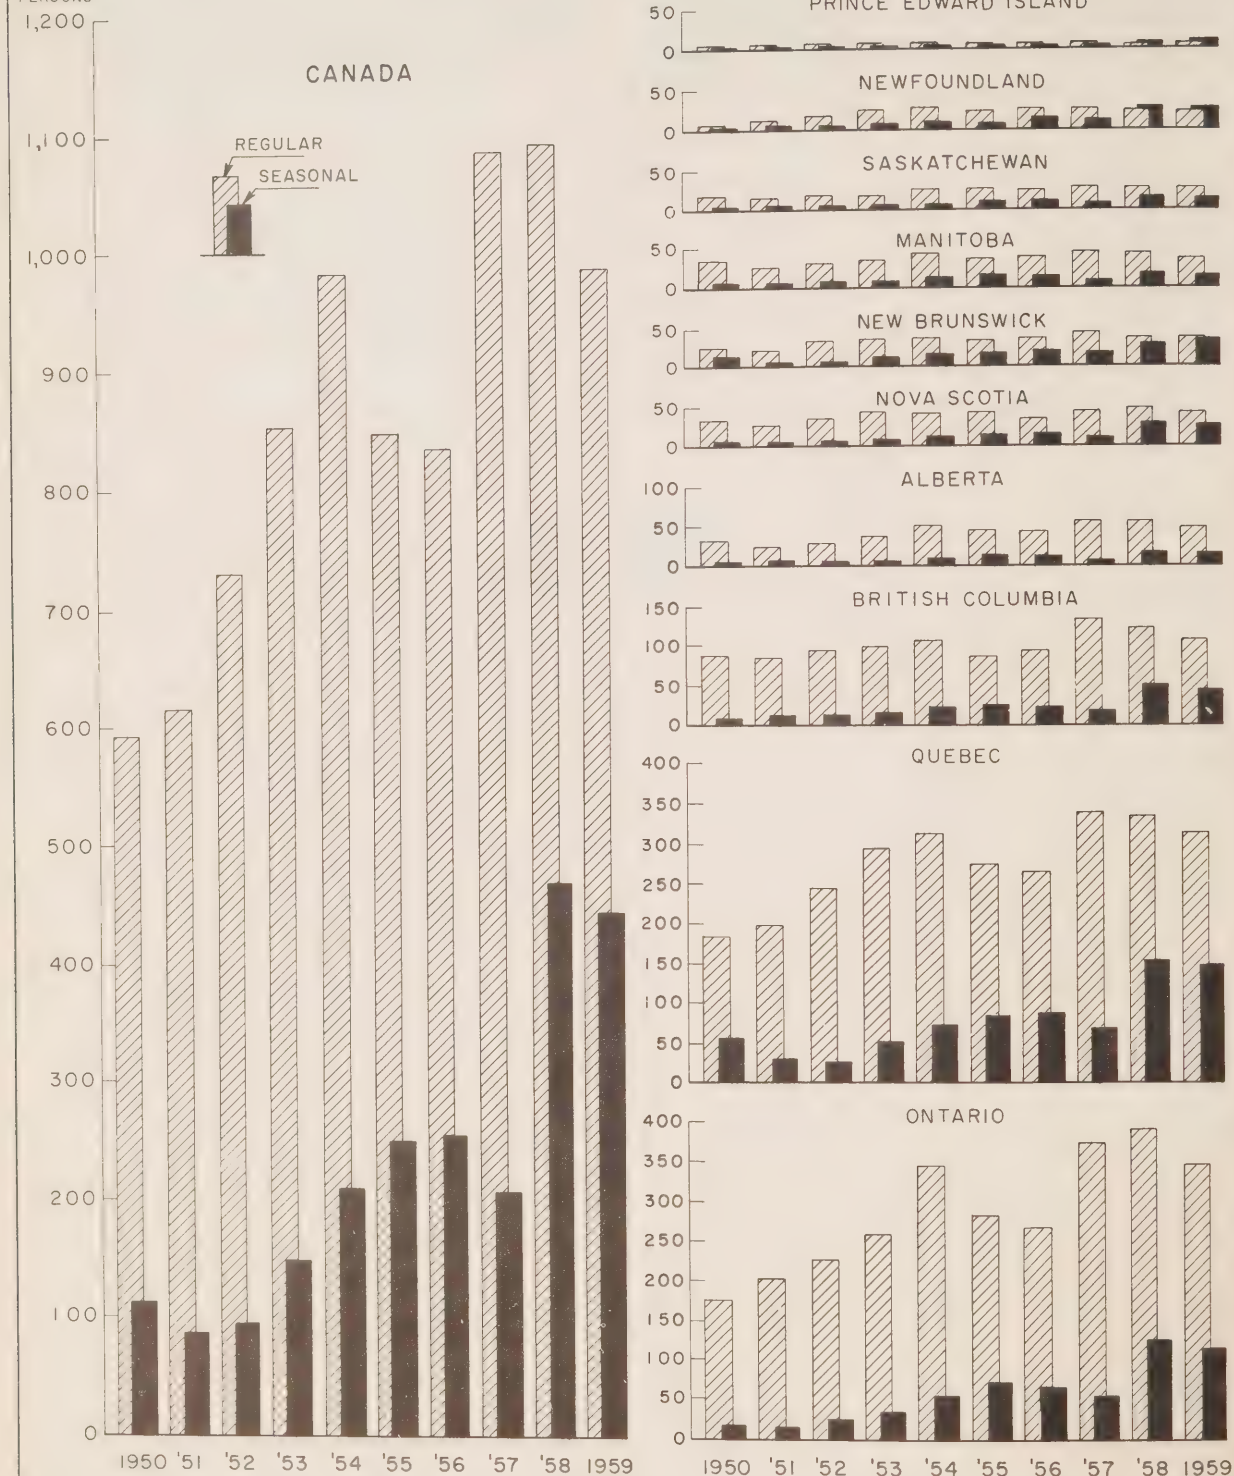

Seasonal benefit claimants drew benefit on the average for about 10.5 weeks, or about 0.7 weeks less than in winter months of 1957-58 when a temporary extension was allowed entitled seasonal benefit claimants. The average payment for seasonal benefit dropped 5.1 p.c. from \$233.37 in 1957-58 to \$221.43 in 1958-59. The exhaustion percentage rate for seasonal benefit was a little higher at 46.0 p.c. than in the longer seasonal benefit period a year earlier.

APPENDIX

SPECIMEN FORMS

The following forms illustrate the clearance of a worker's annual renewal of his insurance book, establishment of benefit entitlement and history of his benefit period, and the tabulation of statistical data presented in this report. They are as follows:

1. Punch card for insured population.
2. Punch card for benefit data.
3. U.I.C. 417 (Computation of Benefit).
4. U.I.C. 485 (Unemployment Register).

ANNUAL REPORT ON BENEFIT PERIODS
ESTABLISHED AND TERMINATED UNDER THE
UNEMPLOYMENT INSURANCE ACT

Calendar Year, 1960

(Compiled from material supplied by the Unemployment Insurance Commission)

Published by Authority of

The Honourable George Hees, Minister of Trade and Commerce

December, 1961
8004-522

Price \$1.00

NOTICE

Following are other publications based upon statistical data in the field of unemployment insurance:

- 73-001 Statistical Report on the Operation of the Unemployment Insurance Act—Monthly—Price: \$2.00 a year.**

(Estimates of the insured population; claims filed, claimants currently reporting to local offices on last working day of month; disposition of claims; claimants not entitled to benefit; weeks and amount of benefit for the month; estimates of beneficiaries; similar data on seasonal benefit claims, period December to May)

- 73-501 Employment under the Unemployment Insurance Act, 1952—Reference Paper 61 (Part 1)—Price: 25 cents.**

(Distribution of contributors by contribution classes; duration of contributory employment; age group and sex; average weeks contributed separately for new entrants and renewals)

- 73-502 Employment Under the Unemployment Insurance Act, 1954—Reference Paper 61 (Part 2)—Price: 50 cents.**

(Historical data on contributors since inception of the Act; classified by earnings, age, sex, and duration of contributory employment; numerous cross-classification; textual resumé of Act and of sampling procedure). Supersedes 73-501.

- 73-503 Unemployment Insurance Claims 1946-55—Reference Paper 78—Price: 50 cents.**

(Historical data on claims filed; claimants with unemployment register in the live file and of benefit payments with data on disposition of claims for 1955; historical data on monthly basis and annual basis for provinces. Appendices contain changes in Act during period)

- 73-504 Statistical Report on the Operation of the Unemployment Insurance Act 1954-58 (Supplement)—Price: 75 cents.**

(Monthly data for Canada and annual data for provinces on regular and seasonal benefit integrated; similar data for seasonal benefit only; appendices on terms, summary of Act, fishing benefit, supplemental unemployment benefit plans, schedules of contribution and benefit rates with amendments; administrative procedures and schedules). Supersedes 73-503.

- 11-003 Canadian Statistical Review—Monthly—Price: \$5.00 a year.**

(Includes statistics for claimants on live unemployment register, claims filed, estimate of beneficiaries, weeks of benefit, contributions to the Fund, total revenue of Fund, balance in Fund, registrations for employment and unfilled vacancies with National Employment Service)

- L12-1 The Labour Gazette—Monthly—Price: \$2.00 a year.**

(Includes decisions of the umpire; some data from first noted publication 73-001; unfilled vacancies with National Employment Service by industry and sex, occupation and sex; registrations for employment by occupation and sex; unfilled vacancies and registrations for employment by local office; placements by NES)

- LU1-60 Annual Report of the Unemployment Insurance Commission—Price: 25 cents.**

Inquiries regarding the first six reports should be directed to the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa. Inquiries regarding the other two publications should be directed to the Editor, Labour Gazette and the Unemployment Insurance Commission; subscriptions should be directed to the Circulation Manager, Labour Gazette and the Queen's Printer.

NINETEENTH

ANNUAL REPORT ON BENEFIT PERIODS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year, 1960

REVIEW OF 1960 EXPERIENCE

In 1960 the gross national product, representing the market value of all goods and services produced, increased by about 2 per cent, to \$36 billion. The labour force, which averaged 6,400,000, increased by about 175,000 or almost 3 per cent. Employment, however, rose by not quite 100,000 and in consequence unemployment increased by over 75,000, or from about 6 per cent of the labour force in 1959 to 7 per cent in 1960.

The insured population, representing that part of the labour force covered by unemployment insurance, during 1960 increased by 33,000 or about 1 per cent to an average level for the year of 4,146,000. Persons establishing regular benefit periods as a

percentage of the average insured population increased from 24 per cent in 1959 to 26 per cent in 1960.

Data are not available regarding benefit periods established by months. However, the volume of claimants each month provides an indication of fluctuations in insured unemployment. The highest volume of claimants among the insured labour force was recorded at the first of April when 823,000 persons were claiming benefit, up 56,000 from the same date in 1959. The lowest level of claimants was recorded at the first of October with 279,000 claimants, some 78,000 more than at the same time in 1959.

Claimants on First of Month 1956-60

Month	1956	1957	1958	1959	1960
Number ¹ (thousands)					
January	388.1	398.2	744.2	715.0	685.7

September	132.3	208.7	294.6	210.0	280.2
October	128.4	226.5	282.6	201.6	279.5
November	139.4	268.0	323.5	250.6	330.2
December	215.4	403.3	419.2	417.5	485.2
Per cent of insured population ²					
January	10.8	10.1	17.6	16.8	16.0
February	13.2	13.7	19.8	18.4	18.2
March	13.9	14.4	20.6	18.7	18.9
April	13.9	14.1	20.4	18.1	19.1
May	8.1	7.7	17.6	14.8	16.9
June	7.2	6.4	10.8	10.9	12.6
July	3.6	5.2	10.7	5.5	7.4
August	3.7	5.1	7.5	5.7	7.4
September	3.5	5.2	7.3	5.3	7.0
October	3.4	5.7	7.1	5.0	7.0
November	3.7	6.7	8.1	6.2	8.3
December	5.6	10.0	10.3	10.1	11.8
Averages	7.6	8.7	13.2	11.3	12.6

¹ These data are taken from the monthly *Statistical Report on the Operation of the Unemployment Insurance Act*, except at indicated book renewal times.

² Monthly estimates of the insured population are obtained by projecting the employed at book renewal time (June 1) on the index of monthly employment compiled in the Employment Section, DBS, and adding the monthly count of claimants.

Persons not able to establish regular benefit periods or who have exhausted regular benefit are considered for seasonal benefit during the period December 1 to May 15. In 1960 persons establishing seasonal benefit periods numbered 443,830, almost the same number as established in 1959.¹

The average authorization of benefit, which indicates potential duration, was 29.6 weeks for regular and 13.0 weeks for seasonal, compared with

¹ This report is concerned with the seasonal benefit period December 1959 to May 1960 and does not include claims for seasonal benefit in December 1960.

26.4 weeks and 13.5 weeks one year earlier. Beneficiaries who terminated benefit in 1960 drew 13.9 weeks for regular and 10.4 weeks for seasonal (13.5 and 10.5 weeks one year ago). The average payment per full week of compensated unemployment on terminations was 56 cents higher than in 1959 at \$22.63 for regular benefit, and 43 cents higher at \$21.47 for seasonal benefit. A sharp rise in exhaustion rates for both regular and seasonal benefit occurred. Benefit outlays on benefit periods terminated rose \$63 millions, or by one-fifth, to \$376 millions for regular benefit, and rose \$0.7 millions to \$99.1 millions for seasonal benefit.

Benefit Data 1950-60

Item	1950	1956	1957	1958	1959	1960

Group B	2.2	24.5	9.8	58.9	38.4	28.6
Per cent exhausting benefit rights	44.2	46.0	54.1

¹ Period: 1950, February, 28 to April 15; 1956, January 1 to April 21; 1957, January 1 to April 20; 1958, December 1, 1957 to June 28, 1958; 1959, December 1, 1958 to May 16, 1959; 1960, December 1, 1959 to May 21, 1960.

² The distinction between A and B claimants has changed over the years. In 1960, 1959 and 1957 Seasonal B claimants must have been unable to qualify for regular and Seasonal A benefit. In 1958 and 1956 the more advantageous class to the claimant was assigned. The 1950 data are not comparable because the program was new, and a third grouping was made for loggers and lumbermen without previous insurable employment.

.. Figures not available.

THE INSURED POPULATION

All persons employed in Canada in wage earning employment under a contract of service were insurable in 1960 unless specifically excepted. About four out of five paid workers were insured in mid 1960. The main exceptions are those working in agriculture; hunting and trapping; private domestic service; teaching; medical, nursing, technical and domestic staff in hospitals or charitable institutions not carried on for gain, unless insured under arrangements with the institution; private duty nursing; members of the armed forces; police forces, unless insured under arrangements with the municipalities and provinces; permanent employees with the federal government or a municipal authority except in municipal public utilities; employment in provincial public service, unless insured under arrangements with the individual provinces; persons paid by commission, such as insurance, real estate and securities salesmen; workers paid on other than hourly, daily or piece rates and earning more than \$5,460 a year, unless election is made to continue insurance. There is no age limit or means test applied for unemployment insurance.

Coverage was extended to any person engaged in commercial fishing on April 1, 1957, notwithstanding that such a person may not be an employee. The "employer", responsible for making contributions on the fisherman's behalf and for keeping records is the actual employer, if he is not a member of the crew; the buyer, if the actual employer is a member of the crew and he or one of the crew sells the catch to the buyer on a face-to-face basis in Canada; and, otherwise, the actual employer or head fisherman or agent acting for the fisherman.

This brief summary of insurance coverage is intended as an aid to those using the tables in this report and should be not considered exhaustive. Reference should be made to the Unemployment Insurance Act 1955 and later amendments and the regulations passed by Order-in-Council under the authority of that statute. Additional information regarding changes taking place over the year is published in the monthly *Statistical Report on the Operation of the Unemployment Insurance Act* and the *Annual Report of the Unemployment Insurance Commission*.

Tables 1 to 5

The data on the persons covered in Tables 1 to 5 are obtained from returns in connection with the renewal of insurance books and contribution cards at June 1st together with new entrants in June. Included in the figures are those who were employed in insurable employment and whose books or cards were therefore renewed through employers, as well as those on claim whose books were renewed at their first visit to a local office after June 1st. As indicated in the headnote to the tables, the data are based upon a 10 p.c. sample of returns (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers are subject to a relatively large sampling variation.

Data on the insured population provide a base to which the figures on benefit periods established and terminated can be related. Table 1 which distributes persons by sex, age and industry is comparable with Tables 16, 26 and 44. Table 1 also shows persons by sex, age and marital status as do Tables 16, 29 and 35. Similarly, Table 2 may be compared with Tables 12, 25 and 43; Table 3 with Tables 14, 24 and 42; Table 4 with Tables 11, 20 and 38; while Table 5 is related to Tables 9, 21 and 39. However, the incidence of benefit periods or benefit weeks paid determined from these tables should be used with caution. The occupation and industries recorded in Tables 1 to 3 are those in which insured persons were engaged or attached (in the case of occupations) at mid-year 1960, whereas those indicated in the other tables cited relate to the last job held by each claimant at the time of his claim. Thus, each must be taken as approximating the "usual" employment and it can not be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the last job recorded. Nevertheless, provincial, occupational, industrial, marital status and age distributions of the insured when compared with those of persons establishing benefit periods and of benefit weeks paid show significant concentrations connected with known shifts in employment.

All of the tables concerning coverage are presented by sex. Insured women have essentially different characteristics from insured men with regard to age, marital status, occupation and industry. Differences between some of these groupings in respect to the percentage covered by insurance who were women are shown below.

Item	Per cent female	Item	Per cent female
Agriculture	15.5	Marital status:	
Forestry	2.8	Married	22.7
Fishing	1.7	Other	37.2
Mining	3.6		
Manufacturing	23.7	Age:	
Construction	3.5	14-19	46.5
Transportation, other utilities	16.1	20-24	36.2
Trade	37.3	25-34	24.5
Finance	63.5	35-44	26.6
Service	43.3	45-54	25.2
		55-64	19.1
Total	27.7	65 and over	11.3

Associated with the emphasis on female office skills, women form the majority of insured workers in finance. The prevalence of clerical operations in trade and service industries account at least in part for the fact that women make up more than a third of the work force of these industries. Almost one quarter of employees in manufacturing are women, related to the emphasis on manual dexterity in bench assembly and production line operations. Despite the increase in participation in gainful employment by married women of recent years, most women still tend to withdraw from employment on marriage as evidenced by the sharp decline in the percentage of women in the insured population age 25 and over.

Emphasis on the variation from province to province of coverage will be noted from the stress in this report on provincial distributions. Cross-classifications, such as industry and age are also used to reveal different aspects of coverage. Thus the high proportion of women in the finance industry

account for the high percentage of all persons under age 45 in that industry. Fishing, on the other hand, which in many areas tends to be a career occupation restricted to men, has a relatively high proportion of persons over age 45.

Industry insured	Per cent under 45 years of age
Agriculture	72.7
Forestry	73.0
Fishing	59.0
Mining	72.7
Manufacturing	71.1
Construction	76.3
Transportation, other utilities	71.5
Trade	74.7
Finance	82.2
Service	67.6

BENEFIT PERIODS ESTABLISHED AND TERMINATED

Summary of Contribution Requirements for Establishing Benefit and Summary of Duration Formulae

Benefit Period

This starts with the week in which the qualifying conditions are fulfilled. The maximum length is 52 weeks in the case of claimants qualifying under the regular terms of the Act. Seasonal benefit periods may be established only from December 1 to mid-May, with a maximum length of 24 or 25 weeks. In either case, however, the benefit period terminates with exhaustion of benefit.

Regular Benefit

Claimants must have made at least 30 weekly contributions in the two years preceding the date of claim; 8 of these must have occurred since the start of the last preceding **regular** benefit period or within the year preceding claim, whichever is the **shorter** period; and 24 of these since the start of the last preceding benefit period, either **regular** or **seasonal**, or in the year preceding the claim, whichever is the **longer** period.

Seasonal Benefit

Claimants in Class A must have failed regular benefit requirements, and have made 15 contributions since the Saturday preceding the 31st of March immediately prior to the date of claim. Claimants in Class B must have failed regular and seasonal class A requirements, and have had a regular benefit period terminate since the Saturday following the 15th of May immediately prior to the claim.

Weekly Rate of Benefit Authorized

The rate for regular benefit is based on the average of the most recent 30 weekly contributions; for seasonal A benefit on the average of all contributions since the previous March 31st; and for seasonal B benefit the same rate (subject to rede-

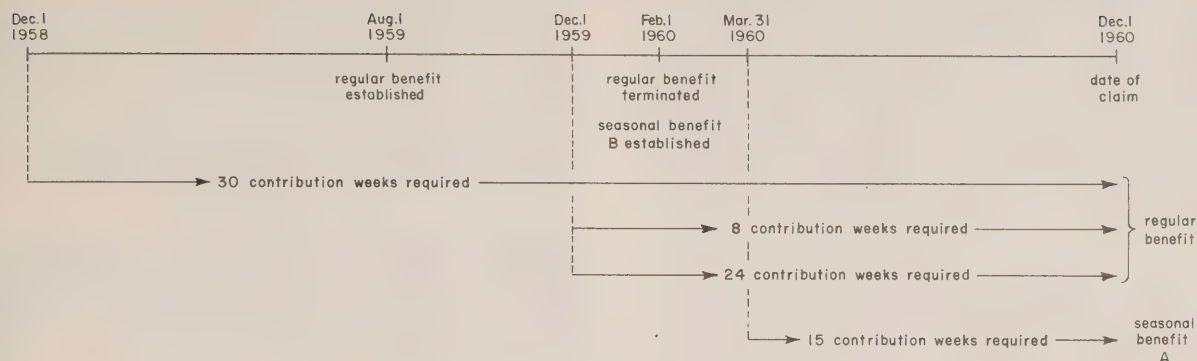

termination of dependency or single position) as the claimant had in his last regular benefit period.

Duration of Benefit Authorized

A claimant is entitled to receive one week's regular benefit for every two contribution weeks in the two year period prior to claim with a maximum of 52 weeks' benefit. However, if there was a regular or seasonal benefit period within this period of two years, only contribution weeks in the last year, or in the period since the start of the last benefit period, whichever is longer, can be used for computing benefit. The minimum duration of regular benefit is 12 weeks. The duration of seasonal benefit A is determined by either five benefit weeks for every six contribution weeks made since the last March 31st, or the number of possible benefit weeks from the claim to May 15, whichever is less. The duration of seasonal benefit B is the number of weeks in the immediately previous regular benefit period, or the number of possible benefit weeks from the claim to May 15, whichever is less. The minimum duration of seasonal A benefit is 13 weeks and for seasonal B benefit 12 weeks, unless the number of possible weeks from the claim to May 15 is less. The maximum duration of seasonal A and B benefit is 24 or 25 weeks.

Illustration of Qualifying Conditions

Assume Claimant X makes a claim for benefit on December 1, 1960. He had established a regular benefit period on August 1, 1959, which he exhausted on February 1, 1960, and had established a seasonal B benefit period on February 1, 1960. He is tested first for regular benefit and must have 30 weekly contributions since December 1, 1958. Of these, he must have contributions recorded for 24 weeks since December 1, 1959, to pass the 8-weeks and 24-weeks tests. If he fails these tests he must have for seasonal A benefit a record of contributions for 15 weeks since March 31, 1960. And, finally, if he fails seasonal A, he will not be eligible for seasonal B, because his regular benefit period terminated on February 1, 1960 and not since May 15, 1960.

Having established his right to insurance benefit, a claimant is usually entitled to receive payment for any week during which he finds he is unemployed, but he is disqualified for every day for which he fails to prove he is (a) capable of work, subject to an exception for illness; (b) available for work, subject to an exception for illness; and (c) unable to obtain suitable employment. Benefit can

be paid during spells of incapacity due to illness, injury or quarantine, if he was entitled to receive benefit at the time this occurred and if it was not because of the incapacity that he stopped working. It is considered that a woman during an interval, generally six weeks, prior to and following childbirth is not available for work.

The schedule of contribution rates was extended with the addition of two new higher classes by 1959 amendments to the Act so as to provide a more realistic benefit rate for employees in the upper earnings range in view of rises in wage levels, and with an increase in other classes to provide additional revenue to the Unemployment Insurance Fund. This revised schedule made no changes in the proportionate share of contributions paid by employees (5/12), employers (5/12), and Government (2/12).

Prior to September 27th, 1959, if a claimant had 30 weekly contributions amounting to \$17.40 his weekly benefit rate would be \$30 where he had a dependent, and \$23 if he had not; and, in addition, he could earn \$13 in casual, subsidiary or short-time earnings. With the amendments, he would require 30 weekly contributions of \$22.50 for benefit of \$30 (dependency) or \$23 (single), although he could earn, in addition, \$15 (dependency) or \$12 (single) in casual earnings. However, with more contributions it was possible to improve his position with the two new benefit classes.

Under the 1940 Act, prior to its 1955 revision, when contributions and benefit were based on days instead of weeks, a claimant's rate of benefit was not so quickly affected by a drop in his earnings as was later the case. On the other hand, the revised benefit provisions allowed a claimant to requalify for a new benefit period more quickly because he could contribute when he was working part of the week. To minimize the effect of a reduction in earnings and contributions, the 1959 amendments provided that where successive regular benefit periods occurred within two years, the rate of benefit during the new regular benefit period would be pegged at not more than one class below the last preceding benefit period.

The new schedule of allowable earnings has different values for claimants with and without dependents. The old schedule had the same values.

The benefit rate to which the claimant is entitled, i.e. single or dependency, is established at the beginning of each benefit period, but is subject to change during the currency of the benefit period. A claimant with a dependent is either (a) a man with a wife maintained wholly or mainly by him; or (b) a married woman with a husband dependent on her; or (c) a person who maintains wholly or mainly one or more children under 16 years; or (d) a person who maintains a self-contained domestic establishment and supports there a person connected by blood, marriage or adoption.

Prior to September 27th 1959 the Act specified one week of benefit for every two contribution weeks in the last two years, with a maximum of 36 weeks and a minimum of 15 weeks generally. However, on a subsequent benefit period only contributions made since the start of the previous benefit period, or within the last year, whichever was the longer period, could be counted giving a minimum of 12 weeks.

Before the 1955 revision of the Act, the maximum duration of one benefit period was 52 weeks. In 1955 the maximum was reduced to 36 weeks. The 1959 amendment restored the maximum to 52 weeks. This increase in the maximum duration also applied to benefit periods in existence on September 27th, 1959 although established at an earlier date where the original duration was 36 weeks, and provided the contribution records warranted it.

Under the provisions regarding allowable earnings from part-time employment while on claim, a claimant with earnings over the prescribed amount will find his benefit cancelled or reduced to the extent of the excess.

Benefit not Paid

For information regarding circumstances under which benefit is not payable see the Unemployment Insurance Act, Sections 54 to 64 inclusive.

Tables 6 to 17

Tables 6 to 12, 14, 15 and 17 give provincial distributions of men and women claimants who established regular benefit in 1960, while tables 13 and 16 are confined to national distributions.

The disproportionate importance of claims for benefit from certain groups in the insured population is shown by the fact that while construction and logging made up about 8 per cent and 2 per cent respectively of the insured population, regular benefit periods established by persons in these industries comprised about 20 per cent and 7 per cent respectively of all regular benefit periods established. Similarly the incidence of regular benefit periods among insured men 65 years of age and over was almost 32 per cent compared to 27 per cent for men of all ages. Married women, who made up slightly more than 50 per cent of all insured women, accounted for more than 60 per cent of all regular benefit periods established by women.

A summary comparison of 1959 and 1960 claimants establishing regular benefit by potential duration and weekly rate of benefit authorized is shown below.

The distributions by duration authorized were:

Weeks of regular benefit authorized	Per cent of claimants	
	1959	1960
12 or more weeks	100.0	100.0
16 " " "	84.6	86.1
20 " " "	64.4	67.1
24 " " "	50.8	53.8
28 " " "	41.4	44.7
32 " " "	35.6	38.8
36 " " "	30.9	33.5
41 " " "	8.3	28.0
45 " " "	6.7	23.4
51 " " "	3.4	12.3

The shift to longer duration in 1960 was accompanied by higher rates authorized claimants, reflecting the amendments to the Act in late 1959, noted previously.

Weekly rate of regular benefit authorized	Per cent of claimants	
	1959	1960
\$ 6 or more	100.0	100.0
12 " "	93.9	94.8
18 " "	74.3	77.3
23 " "	56.1	63.0
27 " "	34.7	43.4
30 " "	24.4	33.0
33 " "	2.7	24.3
36 " "	0.0	11.9

Tables 19 to 29

Tables 20 to 25 and 27 show provincial distribution of men and women claimants who terminated regular benefits while tables 18, 26, 28 and 29 are confined to national distributions.

A copy of one of the documents (UIC 417) prepared in connection with a claim for benefit is sent to the Dominion Bureau of Statistics for each benefit period established. Information from the UIC 417 is then transferred to punch cards and tabulations of these cards provide the statistics of benefit periods established. This procedure is modified for Prairie data to the extent that the Bureau receives a combined authorization and computation card (Remington Rand 393D) which is converted to the IBM card used for other regional figures. As benefit periods terminate (either by exhaustion of benefit authorized or

by lapsing) the UIC 485 (or final RR393D) which has been used in the local office to record activity of the claim week by week is forwarded to the regional contribution office and from there to the Bureau. This record is then used to complete the punch card originally prepared from the UIC 417 with respect to weeks paid, benefits paid and cause of termination. A further tabulation of these cards provide tables on benefit periods terminated.

If punch cards on regular benefit periods established in 1960 were held until by the end of 1961 they had all terminated and were tabulated, a report would be delayed until late in 1962. Earlier information on duration and amount of benefit paid and on exhaustions can be secured by looking at regular benefit period terminations in 1960. A study of these 1960 terminations yielded the following results:

Established in	Cumulative per cent
1959-1st Quarter	26.0
2nd "	40.0
3rd "	53.0
4th "	87.7
1960-1st "	97.0
2nd "	99.1
3rd "	100.0

This confirms that 1960 terminations are mainly 1959 establishments. Because 1960 establishment data are more current, they have been emphasized in the report.

A classification of regular benefit periods terminated by potential and by actual duration showed the following result:

Weeks of regular benefit	Per cent of claimants authorized		Per cent of claimants paid	
	1959	1960	1959	1960
None	—	—	6.5	6.7
1 or more	—	—	93.5	93.3
12 " "	100.0	100.0	57.1	59.9
13 " "	97.9	97.6	52.7	55.3
15 " "	90.2	88.3	41.8	43.3
17 " "	80.1	75.7	31.1	31.0
19 " "	70.5	64.6	23.7	22.5
23 " "	56.8	49.3	16.0	14.2
27 " "	46.4	39.1	11.6	10.1
31 " "	41.0	33.9	8.6	7.7
35 " "	36.2	29.9	6.3	5.9
39 " "	1.6	11.9	1.2	4.2
43 " "	0.8	10.0	0.4	3.1
47 " "	0.4	8.0	0.2	1.9
51 " "	0.2	4.7	0.1	0.6

What conclusions can be reached from these data? It has been shown that 1960 terminations relate in the main to 1959 establishments. However, about 47 p.c. had been established in the fourth quarter of 1959 or later, i.e. following the September 27, 1959 amendments to the Act. Further, the increase in maximum duration authorized applied to benefit periods in existence on September 27, 1959, where the original duration was 36 weeks. Hence, perhaps 50 p.c. or

more of the 1960 terminations were subject to the amended authorizations. The authorizations on 1959 terminations were higher up to 35 or more weeks, but the authorizations beyond this document the effect of changes to the Act. This is shown again in the cumulative distribution of terminations by weeks paid. About the same proportion of entitled claimants drew no regular benefit in both years.

The average duration paid on regular terminations was 13.9 weeks (13.5 one year earlier). Women drew benefit for a longer period (16.2 weeks) on the average than did men (13.3 weeks). However, men because of higher weekly rates averaged \$331 on terminations compared with \$263 for women. Average duration ranged between 16.0 weeks for Prince Edward Island claimants and 12.6 weeks for Alberta claimants. With respect to amount of benefit paid, Newfoundland claimants averaged the highest at \$348 and Alberta the lowest at \$288.

The exhaustion rate for regular benefit was 33.8 p.c. (29.3 p.c. for 1959 terminations). This reflects the economic decline in early 1960. In a comparison of exhaustion ratios for various age groups, the ratio first decreased with increasing age and then increased for the older age groups. The relation is not one of steady progression by age. Prince Edward Island claimants had the highest rates for both men and women, reflecting low durations authorized. The rates for men were higher in seven provinces, practically the same for Nova Scotia claimants and were lower for Ontario and British Columbia claimants.

Seasonal Benefit—Tables 30 to 46

Tables 31, 36 and 38 to 43 are provincial distributions while tables 30, 32-35, 37 and 44-46 are restricted to national distributions. The derived table, Number III, re-arranges the information on age, marital status, occupational and industrial attachment for each province and sex in percentages.

While the number establishing regular benefit increased substantially in 1960 (8.0 p.c.), the total number of persons establishing seasonal benefit from December 1, 1959 to May 21, 1960 was little changed (-0.1 p.c.) from the previous seasonal benefit period. The total establishing seasonal benefit, however, of 444,000 remained relatively close to the total of 470,000 for the peak year of 1958. The average annual rates of increase for numbers establishing regular and seasonal benefit 1951-60 were 4.8 and 16.8 p.c. respectively.

Women comprised a slightly lower percentage (20.4 p.c.) of seasonal than regular benefit claimants (23.8 p.c.). Each of the Atlantic provinces and Quebec accounted for a higher proportion of claimants establishing seasonal benefit than regular benefit, because of the importance of lumbering, logging and fishing in these areas.

Because fewer contributions are required to qualify for seasonal than for regular benefit young persons under 20 years of age formed a somewhat higher percentage of persons establishing seasonal (7.7 p.c.) than regular benefit (7.0 p.c.). Persons

age 65 and over who qualified for seasonal benefit, in many cases following termination of regular benefit period since the previous May 15 also formed a larger proportion of persons establishing seasonal benefit (32.9 p.c.) than those establishing regular benefit (26.6 p.c.).

Payment of benefit to a fisherman is limited to unemployment during the seasonal benefit period except where he is engaged in fishing the year round. Further, the requirements covering the determination of the "full working week" and "availability" are waived for this type of claimant during the seasonal benefit period. Hence most fishermen are claimants for seasonal benefit A.

A marked shift in the composition of seasonal benefit authorized occurred in the 1959-60 benefit period. Some 64.1 p.c. of claimants were seasonal A as against 57.6 p.c. in the previous year. This suggests that from March 31, 1959 to December 1, 1959 or to March 31, 1960, more claimants were able to secure short periods of employment, which—while not enough to qualify for regular benefit—did suffice to qualify for seasonal A.

The proportion of seasonal A claimants was 67.9 p.c. for men and 49.7 p.c. for women. It was higher than the national average in the Atlantic provinces (reflecting in part the higher incidence of fishing benefit) and in Manitoba and Saskatchewan. The percentage was substantially higher than the overall rate for young persons just entering employment and substantially lower for those age 65 or over who tend to have a longer contribution history. It follows that the proportion was higher for single males because of the high proportion of younger persons in this grouping.

The average claimant on seasonal benefit drew 10.4 weeks in 1960 as against 10.5 weeks in 1959. Increases in Newfoundland, Nova Scotia and British Columbia were more than offset by decreases elsewhere.

In addition to the \$375.6 millions in regular benefits paid out on terminations in 1960 (\$312.7 millions a year earlier), a further \$99.1 millions in seasonal benefits were paid on terminations from December 1959 through to mid-May 1960 (\$98.4 millions in 1958-59). The average weekly benefit payment for seasonal benefit was \$21.47 or about 5 p.c. less than for regular benefit.

A classification of seasonal benefit periods terminated by potential and by actual duration showed the following result.

Weeks of seasonal benefit	Per cent of claimants authorized		Per cent of claimants paid	
	1959	1960	1959	1960
None	—	—	4.7	5.1
1 or more	100.0	100.0	95.3	94.9
2 " "	98.6	98.5	90.4	90.6
3 " "	97.0	96.6	86.4	86.2
4 " "	95.1	94.4	82.2	82.1
5 " "	92.9	91.9	78.0	77.7
6 " "	90.1	89.3	73.7	73.6
7 " "	87.1	86.3	69.5	69.5
8 " "	83.6	82.2	65.3	65.0
10 " "	75.9	74.0	56.7	56.5
12 " "	68.2	66.0	48.6	48.4
14 " "	50.4	47.1	33.4	32.6
16 " "	35.7	32.3	22.0	21.1
18 " "	24.5	21.1	13.9	12.8
20 " "	14.3	10.7	7.8	6.2
22 " "	9.4	6.7	4.8	3.7
24 " "	1.2	3.7	0.3	2.1

The cumulative distributions show clearly a decrease in potential and actual duration in 1960 compared with 1959. The seasonal benefit paid runs from the start of the week in which December 1st falls to the end of the week in which May 15th falls. This meant a maximum duration of 24 weeks in 1959 and 25 weeks in 1960. The effect of this extra week is apparent in the number authorized and paid "24 or more" weeks.

The exhaustion ratio for seasonal benefit rose to 54.1 p.c. in 1960 (46.0 p.c. one year earlier) reflecting in part economic conditions in the mid-

winter months of 1959-60. Since the ratio increases with age (46.0 p.c. for claimants aged 14-19 and 54.8 p.c. for those 20 or over) the sharp drop in the number of teenagers able to claim seasonal benefit would also tend to raise the average rate. Newfoundland, Prince Edward Island, New Brunswick and Quebec had higher ratios than the national figure for men. The Atlantic provinces, Quebec and British Columbia had higher ratios than the national average for women. While the overall ratio was higher for women, this did not hold in Newfoundland, New Brunswick, Quebec or Manitoba.

APPENDIX

SPECIMEN FORMS

The following forms illustrate the clearance of a worker's annual renewal of his insurance book, establishment of benefit entitlement and history of his benefit period, and the tabulation of statistical data presented in this report. They are as follows:

1. Punch card for insured population.
2. Punch card for benefit data.
3. U.I.C. 417 (Computation of Benefit).
4. U.I.C. 485 (Unemployment Register).

NOTICE

Following are other publications based upon statistical data in the field of unemployment insurance:

- 73-001 **Statistical Report on the Operation of the Unemployment Insurance Act**—Monthly—Price: \$2.00 a year.

(Estimates of the insured population; claims filed, claimants currently reporting to local offices on last working day of month; disposition of claims; claimants not entitled to benefit; weeks and amount of benefit for the month; estimates of beneficiaries; similar data on seasonal benefit claims, period December to May).

- 73-502 **Employment Under the Unemployment Insurance Act, 1954**—Reference Paper 61 (Part 2)—Price: 50 cents.

(Historical data on contributors since inception of the Act; classified by earnings, age, sex, and duration of contributory employment; numerous cross-classification; textual resumé of Act and of sampling procedure).

- 73-504 **Statistical Report on the Operation of the Unemployment Insurance Act 1954-58** (Supplement)—Price: 75 cents.

(Monthly data for Canada and annual data for provinces on regular and seasonal benefit integrated; similar data for seasonal benefit only; appendices on terms, summary of Act, fishing benefit, supplemental unemployment benefit plans, schedules of contribution and benefit rates with amendments; administrative procedures and schedules).

- 11-003 **Canadian Statistical Review**—Monthly—Price: \$5.00 a year.

(Includes statistics for claimants for unemployment insurance benefit, claims filed, estimate of beneficiaries, weeks of benefit, contributions to the Fund, total revenue of Fund, balance of Fund, registrations for employment and placements effected by National Employment Service).

- L12-1 **The Labour Gazette**—Monthly—Price: \$2.00 a year.

(Includes decisions of the umpire; some data from first noted publication 73-001; placements effected with National Employment Service by industry and sex, registrations for employment by occupation and sex, and by local office.

- LU1-61 **Annual Report of the Unemployment Insurance Commission**—Price: 25 cents.

Inquiries regarding the first four reports should be directed to the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa. Inquiries regarding the other two publications should be directed to the Editor, Labour Gazette and the Unemployment Insurance Commission; subscriptions should be directed to the Circulation Manager, Labour Gazette and the Queen's Printer.

ANNUAL REPORT ON BENEFIT PERIODS ESTABLISHED AND TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

Calendar Year, 1961

REVIEW OF 1961 EXPERIENCE

The number of persons covered by unemployment insurance at June 1, 1961, numbered 4,021,400 or about 88,000 fewer than at the same date in 1960. This decline was related to a noticeable shift

within the labour force away from "goods producing" industries in which coverage is relatively high, to "service" industries in which coverage is relatively low.

Total Employed Paid Workers and Insured Employed in "Goods Producing" and "Service Producing" Industries, June 1961 and 1960

Industry	Total employed				Insured employed			
	1961		1960		1961		1960	
	No.	%	No.	%	No.	%	No.	%
Goods Producing Industries	2, 112	42.0	2, 181	43.5	1, 691	48.2	1, 750	48.7
Service Producing Industries	2, 922	58.0	2, 829	56.5	1, 815	51.8	1, 842	51.3
Totals	5, 034	100.0	5, 010	100.0	3, 506	100.0	3, 592	100.0

The estimated percentage of insured workers establishing rights to regular benefit declined between 1960 and 1961 from 25.7 per cent to 23.9 per cent, although the total unemployment rate edged upward in the same period from 7.0 per cent to 7.2 per cent. The decline in persons establishing regular benefit in 1961 coincided with a relatively high exhaustion rate in the previous year (33.8 per cent in 1960 compared with 29.3 per cent in 1959).

Persons establishing rights to seasonal benefit in 1961 numbered 465,700, an increase of 21,900 over 1960. This appears to have been related to the increase in regular benefit periods terminated in 1960 over 1959 since the increase in seasonal bene-

fit claimants in 1961 was confined to Class B claimants, i.e. persons having a regular benefit period which had terminated since the preceding May 15.

The average weekly regular benefit payment increased to \$24.69 in 1961, from \$22.63 in 1960. Seasonal benefit weekly payments increased similarly to \$22.94 from \$21.47. These increases reflect the fact that 1961 was the first year in which was felt the full impact of the higher contribution and benefit rates effective September 27, 1959.

Total regular benefit paid in 1961 amounted to \$376,300,000 or about the same as in 1960. Seasonal benefit increased from \$99,100,000 to \$112,100,000.

THE INSURED POPULATION

Persons are insurable if they are employed under an expressed or implied contract of service or apprenticeship. The main exceptions are persons working in agriculture; hunting and trapping; private domestic service; teaching; medical, nursing, technical and domestic staff in hospitals and charitable institutions not carried on for gain, unless insured under arrangement with the institutions; private duty nursing; the armed forces; police forces, unless insured under arrangements with municipalities and provinces; permanent employees with the federal government apart from Crown Agencies, provincial governments and municipal governments, except in connection with a public utility; employment in provincial public service, unless insured under arrangement with the prov-

inces; persons paid by commission; workers paid on other than hourly, daily or piece rates and earning more than \$5,460 a year, unless election is made to continue insurance.

The industrial and occupational classifications used in connection with insured population data are the 1960 Standard Industrial Classification and the 1961 Dominion Bureau of Statistics Occupational Classification respectively. This is the first year in which these new coding systems have been used. The principal changes from the 1951 Standard Industrial Classification and the 1951 Dominion Bureau of Statistics Occupational Classification used in 1960 are shown in Appendices B and C respectively.

BENEFIT PERIODS ESTABLISHED AND TERMINATED

Summary of Conditions Relating to Receipt of Benefit

Regular Benefit

Benefit Period—This is a period of 52 weeks starting with, and including, the week in which it is established.

Qualifying Conditions—A claimant must have 30 weekly contributions in the two years immediately preceding the Sunday prior to the claim date, 8 of which must be in the last 52 weeks. When a previous benefit period was established within the two year period the 8 contribution weeks referred to must be in the last 52 weeks or since the start of the last regular benefit period, **whichever is shorter**. A further regulation for subsequent benefit periods is that at least 24 of the 30 contribution weeks referred to must be in the last 52 weeks or since the start of the last benefit period, either regular or seasonal, **whichever is longer**.

Weekly Rate—The rate set at the commencement of the benefit, reflecting dependency status at the time. It is based on the average of the most recent 30 contribution weeks paid in respect to the claimant during the 104 weeks immediately preceding the starting date of his benefit period, in accordance with the table in Appendix A. A higher rate is paid the claimant if he or she has a dependent spouse, or maintains children under 16 years of age, or maintains a self-contained dwelling and supports someone related by blood, marriage or adoption.

Duration—This is one week's benefit for every two contribution weeks in the two years prior to the start of the benefit period, with a maximum of 52 weeks full benefit. Where there was a regular or seasonal benefit period within the last two years, only contribution weeks in the year prior to the claim or in the period since the start of the last

benefit period, whichever is longer, count as contribution weeks for this purpose. Thus the minimum duration is 12 weeks.

Seasonal Benefit

Benefit Period—This may be established only in the span from the start of the week in which December 1st falls to the end of the week in which May 15th next falls. The claimant may establish only one seasonal benefit period in this interval.

Qualifying Conditions—A claimant who fails to qualify for regular benefit may qualify for: Group A, if he has 15 contribution weeks or more since the Saturday prior to the previous March 31st; or Group B, if he is unable to qualify for Group A, and his most recent regular benefit period terminated following the Saturday of the week in which the previous May 15th occurred. Claims filed later than the week in which March 31st falls cannot be considered for the current seasonal benefit under Group A. Those claims filed in the week in which May 15th falls cannot be considered for Group B, unless the waiting period is waived.

Weekly Rate—For Group A benefit, this is the average of the employee's portion of all weekly contributions following the Saturday prior to March 31st, in accordance with the tables in Appendix A; for Group B benefit, this is the same rate, subject to redetermination of dependency position, as applied to the claimant's last regular benefit period.

Duration—For Group A, this is five weeks benefit for every six contribution weeks from the Saturday prior to March 31st, or the number of possible benefit weeks from the claim to May 15th, **whichever is less**. For Group B, this is the number of weeks in the last regular benefit period, or the number of possible benefit weeks from the claim to May 15th, **Whichever is less**. The minimum duration is 13 weeks for Group A and 12 weeks for Group B, unless the number of possible benefit weeks from the claim date is less.

Industrial and Occupational Classification

The 1960 Standard Industrial Classification used for the first time in 1961 for classifying insured population data by industry was also used for classifying benefit data. The occupation code

used for classifying benefit data is the 1951 Dominion Bureau of Statistics Classification of Occupations rather than the 1961 Classification of Occupations which did not become available until April 1961.

PRINCIPAL TABULATION RESULTS

The reduction in regular benefit periods established between 1960 and 1961 was greatest in Ontario, Quebec and British Columbia. By industrial attachment the decreases showed up most prominently in manufacturing, reflecting the importance of this industry in the heavily industrialized central provinces.

Seasonal benefit periods established increased by about 5 per cent in 1961. The percentage increase was greatest in the provinces of Manitoba, Alberta and British Columbia which receive a relatively small share of total seasonal benefit payments.

Average weeks authorized on regular benefit established moved down from 29.6 to 28.1 weeks, and was practically unchanged at 13.1 weeks for seasonal benefit. The potential duration for Seasonal A benefit was about 2.5 weeks longer at 14.1 weeks than for Seasonal B benefit.

The average benefit paid for a week of total unemployment was about \$2 higher on regular terminations in 1961. The overall average was \$24.69, varying by \$5.73, from \$29.23 in British Columbia to \$23.50 in Prince Edward Island, for men; and by \$7.47, from \$18.20 in Alberta to \$10.73 in Ontario, for women. The proportion of claimants who terminated benefit periods without drawing any benefit was unchanged in 1961 at 7.7 per cent for regular and 5 per cent for seasonal benefit.

In the 1960-61 seasonal benefit period the average benefit paid per week was about \$1.50 higher than a year earlier. The overall average was \$22.94 with a spread of \$7.15, between \$28.06 in British Columbia and \$20.91 in Prince Edward Island, for men; and a spread of \$5.01, between \$16.97 in British Columbia and \$11.96 in Prince Edward Island, for women, reflecting the difference in wage levels in these provinces.

The exhaustion rate on regular benefit terminating in 1961 was down to 31.3 from 33.8 per cent in 1960. The rates for men were 33.0 per cent and for women 25.8 per cent. The rate varied as much as 29.0 percentage points by province from 54.4 per cent in Prince Edward Island to 25.4 per cent in Ontario partly due to the differences in the number of weeks authorized. The difference between single and married claimants at 31.4 and 30.7 respectively was more modest.

The rate of seasonal benefit exhaustion in 1961 at 54.8 was practically unchanged from 54.1 per cent in 1960. There seemed to be no sex dif-

ference with the rates steady at 54.8 per cent for both men and women. In Newfoundland where average weeks authorized are considerably less than the national average and where a high proportion of seasonal benefit claimants tend to be fishermen, inactive during the off season, exhaustion rates were about 75 per cent.

Differing Characteristics of Persons Establishing Regular and Seasonal Benefit

The overall ratio of persons establishing seasonal benefit is 48.1 per 100 regular. The ratio varies from 56 for single persons to 44 for married; from 75 for persons 65 years of age or over to 43 for those aged 25-44; from 140 for Prince Edward Island claimants to 35 for Ontario claimants.

Chart 6, based on tables 15 and 36, brings out some interesting differences between persons establishing and claiming regular or seasonal benefit. The distribution of claimants establishing seasonal by weeks authorized is reasonably normal with a concentration in a symmetrical fashion around 14.1 weeks. However, it appears that regular claimants are far less uniform. Claimants establishing from 12 to 36 weeks are distributed in a normal fashion around a central value of 16 weeks of potential regular benefit. Claimants lower down in the tables (from 37 to 52 weeks) form a J-shaped distribution. The average of regular weeks authorized is 28.1, but this is not very meaningful because of the concentration of regular claimants at two peaks, 16 weeks and 51-52 weeks.

Termination of Benefit Periods by Return to Work

Table 28 gives the number of regular benefit periods terminated, classified as to weeks authorized and weeks drawn. Inferences may be drawn from these regarding the differences between claimants as to their characteristics and reactions to employment and prolonged unemployment.

The upper part of Table 28 probably includes a large share of young persons ordinarily in casual employment, and others whose attachment to insurable employment is limited. The lower part of the Table includes many persons with a longer time in insurable employment. For men this would mean more generally older persons who are better established. Family responsibilities would encourage an earlier return to work, but in some cases because of age and industry changes they might be on the way out of the labour force. This picture is probably less accurate for women represented in the lower part of Table 28.

Making allowance for the termination of benefit through death or withdrawal from the labour force, persons drawing less than the authorized number of weeks may be presumed to have returned to work. For those exhausting benefit rights suitable em-

ployment presumably was not available during their benefit period.

The 131,195 persons terminating regular benefit in 1961 who had 51-52 weeks of potential benefit are examined in the table below:

**Percentage Authorized 51-52 Weeks of Regular Benefit
Terminating 1961 Mainly by Return to Work**

Weeks	Number of survivors at start of week		Terminated during week		Per cent terminated	
	Male	Female	Male	Female	Male	Female
0	96,645	34,550	12,620	4,690	13.0	13.6

11	45,790	20,295	2,125	565	4.6	2.8
12	43,665	19,730	2,125	450	4.9	2.3
13-14	41,540	19,280	3,655	1,030	8.8	5.3
15-16	37,885	18,250	3,155	970	8.3	5.3
17-18	34,730	17,280	2,900	795	8.4	4.6
19-20	31,830	16,485	2,820	920	8.9	5.6
21-22	29,010	15,565	2,510	855	8.7	5.5
23-24	26,500	14,710	2,030	735	7.7	5.0
25-26	24,470	13,975	1,830	810	7.5	5.8
27-28	22,640	13,165	1,635	855	7.2	6.5
29-30	21,005	12,310	1,385	815	7.6	6.6
31-32	19,620	11,495	1,505	825	7.7	7.2
33-34	18,115	10,670	1,355	855	7.5	8.0
35-36	16,760	9,815	1,205	850	7.2	8.7
37-38	15,555	8,965	1,035	1,135	6.7	12.7
39-40	14,520	7,830	1,130	1,040	7.8	13.3
41-42	13,390	6,790	1,100	785	8.2	11.6
43-44	12,290	6,005	1,280	870	10.4	14.5
45-46	11,010	5,135	1,445	1,005	13.7	19.6
47-48	9,565	4,130	1,570	835	16.4	20.2
49-50	7,995	3,295	2,710	1,240	33.9	37.6
51-52	5,285	2,055	5,285	2,055	—	—

The above table may be read in the following way: of 96,645 men authorized 51-52 weeks, 13.0 per cent returned to work without drawing any benefit. Of the remaining 84,025 men, 10 per cent terminated through finding employment after receiving one week's benefit.

The percentages for men decrease to a minimum of 4.6 per cent after payment of 11 weeks of benefit and then increase to 33.9 per cent after 49-50 weeks of benefit. The corresponding figures for women are 2.3 per cent after 12 weeks of benefit and 37.6 per cent after 49-50 weeks of paid benefit. It is noteworthy that the percentages of men terminating benefit mainly by return to work are higher than women up to 31-32 weeks. Beyond this point, women authorized the maximum weeks of benefit appeared to find work more readily.

Experience of Potential Beneficiaries

Table 28 shows that for both men and women the percentage of cases where all regular benefit is drawn declines as the authorization increases. For persons having the minimum potential benefit of 12 weeks, about 83 per cent of men and 76 per cent of women drew all the benefit to which they were entitled. Only about 6 per cent of both men and women authorized over 50 weeks drew to the full extent of their entitlement. The proportion of cases for both men and women in which no benefit was drawn increases for entitlement, from 1 per cent of men and 2 per cent of women with the minimum entitlement of 12 weeks to about 13 and 14 per cent respectively for persons authorized over 50 weeks.

APPENDIX B.**Changes from the 1951 Edition of the Standard
Industrial Classification to the 1960 Edition**

1. Veterinary service from community service to agriculture.
2. Natural gas processing plants from petroleum and coal products to mines, quarries, oil wells.
3. Salt refining and processing from non-metallic mineral production to mines, etc.
4. Milk pasteurizers transferred from retail trade to foods and beverages.
5. Ready-mix concrete manufacturers from wholesale trade to non-metallic mineral products.
6. Dental laboratories from community service to miscellaneous manufacturing.
7. Flying clubs and schools from community service to transportation.
8. Highway and bridge maintenance from construction to transportation.
9. Live storage of automobiles from transportation equipment to transportation.
10. Post Office from government service to communications.
11. Motor vehicle repair shops from transportation equipment to retail trade.
12. Radio, television and electrical appliance repair shops from electrical apparatus and supplies to retail trade.
13. Watch and jewellery repair shops from non-ferrous metal production to retail trade.
14. Bicycle repair shops from transportation equipment to retail trade.
15. Shoe repair shops from leather products to personal service.
16. Dressmaking from clothing to personal service.
17. Blacksmith and welding shops from iron and steel products to miscellaneous service.
18. Clothing industry subdivided into clothing and knitting mills.
19. Wood products industry subdivided into wood products, and furniture and fixtures.
20. Iron and steel industry and non-ferrous metal industry subdivided into primary metal; metal fabricating; and machinery.
21. Community service subdivided into education; health and welfare; and religious organizations.

APPENDIX C.**Changes from the 1951 Edition to the 1961 Edition of the
Census Classification of Occupations**

1. Ticket, station and express agents from transportation to clerical.
2. Longshoremen, stevedores and dock labourers from transportation to craftsmen, production process and related.
3. Sectionmen and trackmen from transportation to craftsmen, etc.
4. Linemen and servicemen from communication to craftsmen, etc.
5. Bill and account collectors from communication to clerical.
6. Inspectors, graders, samplers not elsewhere specified from communication to craftsmen, etc.
7. Packers and wrappers, n.e.s. from communication to craftsmen, etc.
8. Purchasing agents and buyers from communication to managerial.
9. Window decorators and dressers from commercial to professional and technical.
10. Other finance from financial to managerial.
11. Barkers, bootblacks, charworkers, launderers, elevator tenders, guides, janitors, undertakers and other personal from personal to other services.
12. Lodging and boarding house keepers, practical nurses, porters and waiters from personal service to housekeepers, etc.
13. Other protective from protective service to clerical.
14. Motion picture projectionist from other service to craftsmen, etc.
15. Manufacturing and mechanical to craftsmen, etc.
16. Electric light and power production and stationary enginemen to craftsmen, etc.
17. Construction to craftsmen, etc.

APPENDIX D

1. Note on Reliability of Estimates

Estimates from samples will differ from the results of complete coverage. However, the expected range of this difference can be measured if the samples are selected through methods by which the probability of selection is known for every member of the group surveyed. The figure which would have been obtained if everyone had been selected may be called the central value. This could, of course, differ from the true value because of non-sampling errors of reporting, recording, coding, punching, sorting and tabulation. Different samples under the same survey conditions would provide estimates, some of which could be larger than the central value and some smaller. Sampling error is a measure of this spread. It shows the range on either side of the sample estimate within which the central value can be expected to lie 95 chances in 100. In about 5 out of 100 cases, the central value can be expected to lie outside this range.

Suppose the average duration of regular benefit paid is being estimated, and the allowable range of error is not to exceed plus and minus one week. How large should the sample be? There should be 95 chances out of 100 that 1.96 times the standard error of the mean equals one week. The standard error of a mean is directly proportional to the standard deviation and inversely proportional to the square root of the sample size. The standard deviation squared is essentially the average of the squares of distances from the mean. It can be shown that if the regular benefit periods were approximately normally distributed (no extremely large or small cases), under simple, unrestricted sampling the sample size should be about 2,600. The sample in Prince Edward Island of 872 cases is too small to assure this specified precision. Similarly, the samples are too small for women except in Ontario, Quebec, Alberta and British

Columbia. In fact, in the case of Prince Edward Island nothing less than a 100 per cent sample would assure this precision.

Chart 6 shows, however, that regular benefit periods are far from normally distributed—thus requiring even larger samples than 2,600 to be “practically certain” of averages calculated from the sample.

As another illustration of sampling error measurement, the sample proportion of insured women in Prince Edward Island in managerial and technical occupations is examined. Based on the number for whom occupation was reported at book renewal, 1.2 per cent of the 325 women were in this group. The squared sampling error of a percentage is directly proportional to the product of the percentage with the attribute times the percentage without the attribute, and inversely proportional to the sample size. It turns out that the chances are 95 out of 100 that the central value lies within 1.2 per cent plus and minus 1.96 times 0.6 per cent, or between 0 and 2.4 per cent.

If, with the same probability, a range of only 0.3 percentage points on each side of the sample percentage is wanted, a sample of over 5,000 Prince Edward Island women would be required. In other words the entire group would have to be tabulated.

The point of these illustrations is simply that estimates based on sub-groups of the samples have larger sampling errors than those based on totals. The estimates given in this report of numbers of persons, weeks paid, and amount of benefit paid, may suggest precise counts. This presentation is justified because it is more easily understood. It must be realized, however, that while many figures based on a small sample have a relatively large margin of error, they do represent the best available and most probable estimate of the true values.

2. Note on Long Term Beneficiaries

Introduction

In the past decade, numbers of unemployment insurance beneficiaries have more than doubled, and the relative increase in long-term beneficiaries has been even greater. For the latter group, as measured by terminated benefit periods on which payments were made for 30 weeks or more, the increase has been from about 37 thousand in 1950 to 96 thousand in 1961.

From the following table it may be observed that the increase in long term beneficiaries has

been greater among women than among men. These figures understate increases to some extent because it is not possible to identify persons, who, in the course of an unbroken period in receipt of benefit, have requalified for additional credits under either regular or seasonal benefit terms. Such persons will be included in the statistics of regular benefit periods terminated, but the duration indicated will not include the additional weeks on a subsequent period. It is safe to say, therefore, that more than 100,000 persons received unemployment insurance benefit for a period of 30 weeks or more on a benefit period terminating in 1961.

TABLE 1. Regular Benefit Periods Terminated 1950 and 1961

(1961 estimates based upon 20 per cent sample)

	Total		30 weeks +	
	Men	Women	Men	Women
1950	454, 246	123, 865	25, 060	12, 920
1961	820, 245	246, 110	56, 375	40, 385

In 1961, for claimants terminating regular benefit periods and receiving benefit for 30 weeks or more, the average duration on benefit was 40 weeks compared with an average of 12 weeks for those with a benefit duration of less than 30 weeks.

The present study examines a sample of claim documents for regular benefit periods terminated in 1961. From these documents the age, sex, depend-

ency and marital status of claimants can be determined. It is also possible to relate these characteristics to industry of last employment and to learn something of the earnings pattern in the thirty weeks prior to establishment of a claim. In the 1961 analysis which follows, long term beneficiaries are examined side by side with claimants paid less than 30 weeks. The latter are referred to subsequently as **other claimants**.

TABLE 2. Summary of Main Characteristics of Long Term compared with Other Claimants

Personal characteristics	Per cent distribution	
	Long term	Other
Sex composition:		
Males	58	79
Females	42	21
Age:		
20 - 44	47	69
65 and over	16	3
Marital status:		
Single	23	33
Married	69	63
Per cent of females married	72	59
Dependency status:		
With dependent	40	51
No dependent	60	49
Occupational status:		
White collar	35	15
Construction	5	14
Labourers	14	22
Industry of last employment:		
Construction	7	21
Trade	20	12
Service	19	13
Earnings pattern:		
Less than \$51 weekly	43	36
\$51 a week or over	57	64

Characteristics

Sex—Women accounted for a disproportionate number of the long term claimants, 42 per cent, whereas they comprise only 21 per cent of other claimants. Corresponding percentages for men were 58 and 79.

Age—The proportion of men in the long term group increased sharply at age 45. Only 47 per cent

of claimants in the 20-44 age group were men, in comparison with 66 per cent for ages 45-64. The proportion increased to 88 per cent at age 65. For other claimants, the proportion of males was substantially greater at all age levels, 78 per cent at ages 20-44, 82 per cent for those 45-64 and over 90 per cent at age 65.

TABLE 3. Sex Composition of Claimants by Age Group, 1961

(Based on 20% sample)

Age	Long term (30 weeks +)		Other	
	Male	Female	Male	Female
	per cent			
Totals	58	42	79	21
14-19	53	47	62	38
20-44	47	53	78	22
45-64	66	34	82	18
65 & over	88	12	90	10

Close to 25 per cent of the long term male claimants were 65 or over, although less than 5

per cent of women and 3 per cent of other claimants were in this age group.

TABLE 4. Sex and Age Distribution of Persons Terminating Regular Benefit in 1961, by Duration of Benefit Paid

(Based on 20% sample)

Age	Per cent distributions					
	Long term (30 weeks +)			Other		
	Both sexes	Male	Female	Both sexes	Male	Female
Totals	100	100	100	100	100	100
14-19	2	2	2	4	3	8
20-44	47	46	73	69	68	70
45-64	25	28	20	24	25	21
65 & over	16	24	5	3	3	1
Actual number (in thousands)	96	56	40	970	764	206

Marital Status—Partly because of the disproportionate number of women in the long term group, the distribution of this group according to marital status differed substantially from that of other claimants. More than two-thirds of the long term claimants were married, the proportions being 67 per cent for men and 72 per cent for women. Some

63 per cent of other claimants were married, males outnumbering females four to one. On the other hand, only 23 per cent of those receiving benefit 30 weeks or more was single, compared with 33 per cent for other claimants. These distributions are also associated with variations in the age composition of the claimants.

TABLE 5. Marital Status and Sex Distributions of Persons Terminating Regular Benefit in 1961, by Duration of Benefit Paid
(Based on 20% sample)

Marital status	Per cent distributions					
	Long term (30 weeks+)			Other		
	Both Sexes	Male	Female	Both Sexes	Male	Female
Totals	100	100	100	100	100	100
Single	23	26	18	33	33	31
Married	69	67	72	63	64	59
Other	8	7	10	4	3	10
Actual Number (in thousands)	96	56	40	970	764	206

Occupation—Thirty-five per cent of the long term beneficiaries were white collar workers, of whom 70 per cent were women. For other claimants these proportions were 15 per cent and 57 per cent, respectively. Manufacturing and mechanical occupations accounted for about 18 per cent of the long term group with the majority being men. Service occupations and labourers each accounted for 14 per cent.

Construction workers accounted for a very small number of the long term claimants but made up almost 15 per cent of the others. This is undoubtedly related to the highly seasonal nature of construction work. Labourers were also appreciably less numerous in the long term group.

TABLE 6. Occupational Status and Sex Distributions of Persons Terminating Regular Benefit in 1961, by Duration of Benefit Paid
(Based on 20% sample)

Occupation	Per cent distributions					
	Long term (30 weeks+)			Other

Others	5	7	1	10	12	--
Actual number (in thousands)	96	56	40	970	764	206

* Comprising managerial, professional, clerical, commercial and financial.

Latest Industrial Attachment—Almost three-quarters of the long term beneficiaries had been previously attached to either manufacturing, trade or service, the proportion being 80 per cent for women as against 68 per cent for men. Trade and service accounted for slightly less than half the

women and about a third of the men. The number coming from manufacturing was slightly larger for men than for women. The distribution of industrial attachments is associated with the high ratios of married women and older men among long term beneficiaries.

TABLE 7. Distributions of Persons Terminating Regular Benefit in 1961, by most Recent Industrial Attachments, Sex and Duration of Benefit Paid

(Based on 20% sample)

Industry	Per cent distributions					
	Long term (30 weeks+)			Other		
	Both sexes	Male	Female	Both sexes	Male	Female
Totals	100	100	100	100	100	100
Primary	4	6	1	12	14	2
Manufacturing	34	36	31	32	30	43
Construction	7	11	1	21	26	1
Transportation, public utility, finance	16	15	18	10	11	8
Trade	20	15	28	12	9	22
Service	19	17	21	13	10	24
Actual number (in thousands)	96	56	40	970	764	206

Dependency Status—Forty per cent of the long term claimants were maintaining a dependent. This rate was somewhat lower than that for the other claimant group of whom 50 per cent were in this category. The lower rate for the long term people may be associated with the fact that a high propor-

tion are women. The long term male claimants in contrast with other male claimants, however, tended to have a somewhat larger proportion maintaining a dependent and this is probably associated with the age structure.

TABLE 8. Distributions of Persons Terminating Regular Benefit in 1961, by Dependency Status, Sex, and Duration of Benefit Paid

(Based on 20% sample)

Dependency status	Per cent distributions					
	Long Term (30 weeks+)			Other		
	Both sexes	Male	Female	Both sexes	Male	Female

Without a dependent	60	36	93	49	38	92
Actual number (in thousands)	96	56	40	970	764	206

Weekly Earnings Levels—On the basis of the weekly rate authorized it is possible to learn something of the weekly earnings pattern during the 30 weeks prior to establishing a claim. For both types of claimants there is the usual concentration at the upper end of the schedule. However, almost a third

of the long term males earned \$69 or over per week, compared with less than a quarter of other males. Almost one in five of the females drawing 30 weeks or more had average weekly earnings of \$57 or better. For other female claimants, this proportion was about one in eight.

**TABLE 9. Earnings Pattern of Persons Terminating Regular Benefit in 1961,
by Sex and Duration of Benefit Paid**

(Based on 20% sample)

Limitations of the Study

Practical considerations limit the approaches which can be made to a study of the long term beneficiary group. In order to bring together all who were on claim over a continuous period of 30 weeks or more during 1961, it would be necessary to study claim documents for 1962 as well as those for 1961. This would happen where there was a balance of entitlement carried over into 1962. Where exhaustion of rights was followed by re-establishment of additional benefit (either regular or seasonal), matching of documents would be required in order to bring together all records for one person. A beneficiary drawing 25 weeks of regular benefit and then continuing on, under seasonal, for another 10 weeks, would have to be included, since his long term record would be in excess of 30 weeks.

The complexities of setting up a study to include such cases are formidable. Hence, the decision was made to concentrate on regular benefit periods terminating in 1961 on which 30 or more weeks was paid. Some of those periods were set up in 1960 and benefit rights were carried over into 1961. On the other hand, another 10 per cent might have been included had it been feasible to sort out persons drawing 30 weeks or more on contiguous benefit periods.

The source of the study was the punch cards used in preparing the "Annual Report on (Regular) Benefit periods Established and Terminated during 1961". These cards show the number of weeks compensated in the benefit period, no attempt being made to specify whether or not the compensated weeks were continuous. Since periods of illness of

disability suffered while eligible for benefit are compensated as if they were bona fide unemployment, such periods¹ would be included.

In conclusion it should be remembered that unemployment insurance data are necessarily influenced by the terms of the Act and Regulations. The insured population, from which the 1961 terminated regular claims emanated, constitutes some 4 million persons comprising about 80 per cent of the non-agricultural paid worker labour force. Amendments in September 1959, which included raising the wage ceiling to \$5,460, brought under coverage some 80,000² salaried employees previously excluded because their earnings exceeded \$4,800. At the same time, the maximum duration of 36³ weeks operative since October 1955 was returned to its pre-October 1955 level of 52 weeks.

Under the present Act, a week of benefit may also be a week in which some work was done. For any week in which the earnings are in excess of 50 per cent of the weekly benefit rate, the amount of benefit is reduced by the amount of such excess. This study, however, avoids the complication of partial weeks. Instead, the "week" concept as used in this report is the equivalent of complete weeks computed by dividing the amount of benefit paid by the weekly rate authorized.

¹ It is estimated that this proportion does not exceed 2 per cent.

² Source: 19th Annual Report Unemployment Insurance Commission.

³ Under Section 121 of the 1955 Act provision was made to allow certain claimants exhausting their benefit to have their entitlement extended on the basis of credits acquired under the 1940 Act. In this way, the maximum of 36 weeks was only partially effective.

REVIEW OF 1962 EXPERIENCE

The position of labour improved in 1962. The number of employed persons increased by nearly 3 p.c., and the non-agricultural component of this number increased by 3.5 p.c. Men and women shared in the increase. Gains in employment occurred in all industries except agriculture and other primary industries—the largest increment being in construc-

tion and non-government service (community, business, personal and recreational service). The average rate of unemployment in 1962 was 5.9 p.c. of the labour force, compared to 7.2 p.c. in 1961.

Changes in employment by broad industry groups are shown in the following table.

TABLE A. Employment by Industry¹

Industry	Monthly average		Per cent change		
	1961	1962	Men	Women	Both sexes
	000's of persons				
Agriculture	674	653	- 4.1	8.8	- 3.1
Other primary industries ²	183	177	- 2.8	³	- 3.3
Manufacturing	1,515	1,567	3.7	2.9	3.4

² Includes forestry, fishing and trapping, and mining, quarrying and oil wells.

³ Estimates less than 10,000.

⁴ Includes business, personal, community and public and recreational service.

Source: DBS "The Labour Force", Catalogue No. 71-001.

The insured population, that part of the labour force covered by unemployment insurance, during 1962 increased by 20,000 to an average level for the year of 4,075,300. Claims for regular benefit established as a percentage of average insured population dropped from 24.3 p.c.¹ in 1961 to 22.5 p.c. in 1962.

Persons not able to establish regular benefit periods or who have exhausted regular benefit are considered on application for seasonal benefit during the interval December 1 to May 15. In 1962

the number of such persons was 375,405 or 9.2 p.c. of the average insured population—a sharp decline from 11.5 p.c. in 1961.

Figures are not available for benefit periods established by months. However, the volume of claimants each month is an indicator of fluctuations in insured unemployment. The following table shows the effect of the 1957-58 recession in the high percentages of the insured population claiming benefit until December 1958. Through 1959 the figures were substantially lower than in 1958, reflecting the expansion in that year. Percentages turned up again by February 1960 and persisted at higher levels until June 1961. Since then, ratios have been lower than in the same months of the previous year.

¹ This percentage was obtained after adjusting the 1961 total of persons to periods.

¹ Count of claimants at book renewal time.

² Monthly estimates of the insured population are obtained by projecting employed at book renewal time (June 1) on the index of monthly employment compiled in the Employment Section, DBS, and adding the month-end count of claimants.

Source: DBS Statistical Report on the "Operation of the Unemployment Insurance Act", Catalogue No. 73-001.

Average authorized or potential duration was 27.4 weeks for regular and 13.2 weeks for seasonal, compared with 28.1 weeks and 13.1 weeks one year earlier. Beneficiaries who terminated benefit in 1962 drew 13.0 weeks for regular and 10.1 weeks for seasonal (14.3 and 10.5 weeks in 1961). Average payment per full week of compensated unemployment on terminations was 48 cents higher than in 1961

at \$25.17 for regular benefit and 59 cents higher at \$23.53 for seasonal benefit. A sharp drop in exhaustion rates for both regular and seasonal benefit occurred. Total benefit paid on benefit periods terminated in 1962 dropped \$72 millions to \$304 millions for regular benefit and dropped \$23 millions to \$89 millions for seasonal benefit.

1959—Nov. 30, 1958 to May 16, 1959.

1960—Nov. 29, 1959 to May 21, 1960.

1961—Nov. 27, 1960 to May 20, 1961.

1962—Nov. 26, 1961 to May 19, 1962.

THE INSURED POPULATION

A person is insurable if employed under an expressed or implied contract of service or apprenticeship. The main exceptions are someone working in agriculture; hunting and trapping; private domestic service; teaching; medical, nursing, technical and domestic staff in hospitals and charitable institutions not carried on for gain, unless he is insured under arrangement with the institution; private duty nursing; the armed forces; police forces, unless he is insured under arrangements with municipalities and provinces; permanent employees with the federal government apart from Crown Agencies, provincial

governments and municipal governments, except in connection with a public utility; employment in provincial public service, unless he is insured under an arrangement with the province; truckers; considerable employment, supported by a declaration, such as part-time for less than 24 hours a week, temporary work in December, and employment for no more than 30 consecutive days with carnivals, exhibitions, race meetings, etc; persons paid by commission; a worker paid on other than hourly, daily or piece rates and earning more than \$5,460 a year, unless he elects to continue insurance.

Coverage has been gradually extended to occupations originally excluded. In some, this has come about as administrative problems were solved. Extension of coverage brought in transportation by air and by water; stevedoring; lumbering and logging; nursing other than private duty nursing; public utilities; hospitals and charitable institutions (on an optional basis); some parts of agriculture, such as raising of poultry and egg grading, and breeding or raising race horses, saddle horses or light harness horses, and landscape gardening.

Coverage was extended to any person engaged in commercial fishing on April 1, 1957, notwithstanding that he might not be an employee. The "employer" responsible for making contributions on the fisherman's behalf and for keeping records is the actual employer, if he is not a member of the crew; the buyer, if the actual employer is a member of the crew and he or one of the crew sells the catch to the buyer on a face-to-face basis in Canada; and otherwise, the actual employer or head fisherman or agent acting for the fisherman. During the seasonal benefit period, claimants classified as fishermen are considered available and unemployed in respect to any activity in commercial fishing or in repairing fishing gear or boat. However, income from fishing is considered in determining benefit payable.

Data on persons covered are obtained from returns in connection with the renewal of insurance books and contribution cards at June 1st together with new entrants in May and June. Included in the figures are those who were employed in insurable employment and whose books or cards were therefore renewed through employers, as well as those on claim whose books were renewed at their first visit to a local office after May 1st. As

indicated in the headnote to the tables, figures are based upon a 10 p.c. sample of returns (consisting of those with insurance numbers ending in 4) and, therefore, smaller numbers are subject to relatively large sampling variation.

Data on the insured provide a base to which figures on benefit periods established and terminated can be related. Counterparts of these tables are noted below. However, incidence of benefit periods or benefit weeks paid determined from these tables should be used cautiously. Occupations and industries recorded in Tables 1 to 3 are those in which the insured was engaged or attached at mid-year 1962. Those indicated in related tables refer to the last job held by each claimant at the time of his claim. Thus, each must be taken as approximating his "usual" employment and it can not be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the last job recorded. Nevertheless, comparisons show significant concentrations connected with known shifts in employment.

Insured tables	Related tables
1	10, 15, 25, 28, 34, 43
2	11, 24, 42
3	13, 23, 41
4	6, 19, 37
5	8, 20, 38

All of the figures in this report are classified by sex. The logic behind this decision is apparent from the following table. While women made up 28.1 p.c. or considerably less than one-third of the insured, they accounted for a larger share of single persons, Ontario and Manitoba insured, white collar workers, those under 25 years of age, and of trade, finance and service workers.

TABLE D. Insured Women, 1962

Characteristic	Per cent of all insured	Characteristic	Per cent of all insured
Total	28.1	Age:	
Marital status:		14-19	48.0
Single	35.9	20-24	36.6
Married	23.1	25-34	24.2

Quebec	27.6	Primary ¹	4.6
Ontario	30.6	Manufacturing	24.7
Manitoba	29.7	Construction	3.4
Saskatchewan	25.7	Transportation and other utilities	14.8
Alberta	27.2	Trade, finance, service	42.9
British Columbia	27.3		
Occupation:			
White collar ¹	51.4		
Blue collar ²	14.4		
Other	25.0		

¹ Includes managerial, professional, clerical and sales.

² Includes craftsmen and production process workers and unskilled labouring occupations.

³ Includes agriculture, forestry, fishing, and mining.

Atlantic provinces accounted for 8.8 p.c. of the insured but a higher proportion of teenagers, and of primary and transportation workers. Quebec accounted for 29.1 p.c. of the insured but a larger share of single persons, of those under 25 years of age, and of factory or blue-collar workers. Ontario represented 38.6 p.c. of the insured but rather more of married insured, those over 65 years of age, manufacturing and white-collar workers. The Prairies accounted for 13.7 p.c. of the insured overall but a

a bigger portion of non-factory workers and of other-occupation insured. British Columbia constituted 9.8 p.c. of the insured but more of married, those over 25 years of age, of primary, transportation, trade, finance and service insured.

Persons 45 years of age or over constituted 29.2 p.c. of the insured overall but only 12.6 p.c. of single workers (35.6 p.c. of the married) and 23.8 p.c. of construction workers.

BENEFIT PERIODS ESTABLISHED AND TERMINATED

Summary of Conditions Relating to Receipt of Benefit

Regular Benefit

Benefit Period.—This is a period of 52 weeks starting with, and including, the week in which it is established.

Qualifying Conditions.—A claimant must have 30 weekly contributions in the two years immediately preceding the Sunday prior to the claim date, 8 of which must be in the last 52 weeks. When a previous benefit period was established within the two year period the 8 contribution weeks referred to must be in the last 52 weeks or since the start of the last regular benefit period, **whichever is shorter**. A further regulation for subsequent benefit periods is that at least 24 of the 30 contribution weeks referred to must be in the last 52 weeks or since the start of the last benefit period, either regular or seasonal, **whichever is longer**.

Weekly Rate.—The rate is set at the commencement of the benefit, and reflects dependency status at the time. It is based on the average of the most recent 30 contribution weeks paid in respect to the claimant during the 104 weeks immediately preceding the starting date of his benefit period, in accordance with the table in Appendix A. A higher rate is paid the claimant if he or she has a dependent spouse, or maintains children under 16 years of age, or maintains a self-contained dwelling and supports someone related by blood, marriage or adoption.

Duration.—This is one week's benefit for every two contribution weeks in the two years prior to the start of the benefit period, with a maximum of 52 weeks full benefit. Where there was a regular or seasonal benefit period within the last two years, only contribution weeks in the year prior to the claim or in the period since the start of the last benefit period, whichever is longer, count as contribution weeks for this purpose. Thus the minimum duration is 12 weeks.

Seasonal Benefit

Benefit Period.—This may be established only in the span from the start of the week in which December 1st falls to the end of the week in which May 15th next falls. The claimant may establish only one seasonal benefit period in this interval.

Qualifying Conditions.—A claimant who fails to qualify for regular benefit may qualify for: Group A, if he has 15 contribution weeks or more since the Saturday prior to the previous March 31st; or Group B, if he is unable to qualify for Group A, and his most recent regular benefit period terminated following the Saturday of the week in which the previous May 15th occurred. Claims filed later than the week in which March 31st falls cannot be considered for the current seasonal benefit under Group A. Those claims filed in the week in which May 15th falls cannot be considered for Group B, unless the waiting period is waived.

Weekly Rate.—For Group A benefit, this is the average of the employee's portion of all weekly contributions following the Saturday prior to March 31st, in accordance with the tables in Appendix A; for Group B benefit, this is the same rate, subject to redetermination of dependency position, as applied to the claimant's last regular benefit period.

Duration.—For Group A, this is five weeks benefit for every six contribution weeks from the Saturday prior to March 31st, or the number of possible benefit weeks from the claim to May 15th, **whichever is less**. For Group B, this is the number of weeks in the last regular benefit period, or the number of possible benefit weeks from the claim to May 15th, **whichever is less**. The minimum duration is 13 weeks for Group A and 12 weeks for Group B, unless the number of possible benefit weeks from the claim date is less.

In the current report data for regular benefit established in 1962 relate to "periods" whereas data for earlier years are for "persons". This change was made to effect a saving in data processing necessitated by the "austerity" program of the past year. The change does not significantly affect comparability with previous years as shown by the following comparison:

Year	No. of periods	No. of persons	Ratio of persons to periods
1957	1, 103, 628	1, 086, 172	. 984
1958	1, 110, 156	1, 091, 484	. 983
1959	1, 002, 428	985, 148	. 983
1960	1, 090, 580	1, 065, 750	. 977
1961	986, 205	967, 680	. 981

Since a claimant may establish only one seasonal benefit period in the December—mid-May interval, persons and periods are synonymous for seasonal benefit. Figures on regular terminations have always referred to periods and not to persons.

Regular Claims Established

Women comprised 28.1 p.c. of mid-year insured but accounted for only 24.4 p.c. of regular benefit claims established. Making up only 24.7 p.c. of the factory workers insured they constituted 31.9 p.c. of regular benefit periods established by factory workers. They comprised 51.4 p.c. of white-collar insured but 59.8 p.c. of regular claims established for white-collar workers. Women constituted 24.4 p.c. overall of regular claims established but higher portions of those authorized 25 weeks or more, of those established at single rates and of those authorized less than \$23 weekly of benefit.

Atlantic provinces accounted for 8.8 p.c. of the mid-year insured but 11.8 p.c. of regular claims established. Corresponding ratios for other regions were: Quebec, 29.1 p.c. and 30.9 p.c.; Ontario, 38.6 p.c. and 34.0 p.c.; Prairie, 13.7 p.c. and 13.1 p.c.; and British Columbia, 9.8 p.c. and 10.2 p.c.

Atlantic provinces and Quebec accounted for 42.7 p.c. of all regular claims established but more of those for shorter durations and for weekly rates of benefit less than \$23. Furthermore, the Atlantic provinces accounted for relatively fewer regular benefit claims established at single benefit rates.

The age groups 20-24, 25-34 and 65+ made up a larger share of all regular claims established than they did of all mid-year insured.

Regular claims established at single rates comprised 52.4 p.c. of the total overall, but 93.1 p.c. of those established at weekly rates under \$23, and higher than overall percentage shares of weeks authorized for 25 to 50 weeks of duration.

Regular claims established at weekly rates of benefit less than \$23 comprised 33.7 p.c. of all claims overall but higher shares of those authorized from 25 to 50 weeks duration. This only confirms the marked relationship between claims classified by single rates of benefit and those classified by weekly benefit under \$23.

Regular Claims Terminated

Women terminated 23.5 p.c. of all regular claims but drew 26.6 p.c. of weeks paid. This difference between a lower proportion of regular terminations and a higher proportion of weeks paid held in the case of women for each grouping of claimants except teenagers.

Atlantic claimants comprised 11.4 p.c. of regular terminations but drew 12.6 p.c. of weeks paid. Corresponding figures for other regions were: Quebec, 31.1 p.c. and 31.3 p.c.; Ontario 34.3 p.c. and 32.2 p.c.; Prairie, 12.4 p.c. and 13.2 p.c.; and British Columbia, 10.9 p.c. and 10.7 p.c.

Workers classified to transportation and to trade, finance and service accounted for a higher proportion of weeks paid than they did of regular terminations.

Claims which lapsed accounted for 73.2 p.c. of all terminations but only 60.2 p.c. of weeks paid. In contrast, claims in which all benefit was drawn made up 26.8 p.c. of all terminations but as much as 39.8 p.c. of weeks paid.

Claimants 45 years of age or over accounted for a larger share of weeks paid than of regular terminations.

The exhaustion rate on regular terminations overall was 26.8 p.c. but ranged by province from 49.3 p.c. in Prince Edward Island to 20.8 p.c. in Ontario. The rate overall for men was 27.9 p.c. and for women 23.0 p.c. However, women had a higher exhaustion rate than men in Prince Edward Island, Nova Scotia, Ontario and British Columbia. The rate ranged from 49.5 p.c. for claimants aged 65 or over to 22.6 p.c. for those aged 20 to 24. The male rate exceeded the female for each age grouping. The rate for single men was a little higher than for married men. Nevertheless, the exhaustion rate was much higher for married women than for single women. The excess of the male rate over the female rate was substantial in the case of single claimants but minor in the case of married claimants as will be observed below:

Marital status	Exhaustion ratio		
	Male	Female	Both sexes
Single	29.4	15.7	26.4
Married	26.8	25.6	26.5

While the rate for all married claimants was about the same as for single claimants, it was higher in the case of claimants under 25 years and over 64 years of age.

Seasonal Claims Established and Terminated

Women comprised 28.1 p.c. of the mid-year insured, 24.4 p.c. of claims established for regular benefit, and 20.1 p.c. of those established for seasonal benefit and of weeks of seasonal benefit paid. They accounted for slightly more of seasonal than of regular claims established by Ontario, British Columbia and factory workers.

Women were responsible for 20.0 p.c. of all seasonal claims which lapsed and the same proportion of those which exhausted. Corresponding percentages for regular terminations were 24.7 and 20.2 p.c.

As in the case of regular benefit, women accounted for more of claims authorized and paid longer durations than they did of claims overall. Making up 20.1 p.c. of all seasonal benefit claims established, they accounted for 26.1 p.c. of Group B benefit.

The Atlantic provinces accounted for a very large share of seasonal claims established relative to their portion of the mid-year insured. Furthermore, 26.5 p.c. of weeks paid on seasonal benefit was drawn in the Atlantic provinces.

Region	Per cent of all		
	Insured	Regular claims established	Seasonal claims established
Atlantic	8.8	11.8	22.5
Quebec	29.1	30.9	30.3
Ontario	38.6	34.0	24.9
Prairie	13.7	13.1	11.7
British Columbia....	9.8	10.2	10.6

Seasonal A benefit including fishing benefit is particularly important in the Atlantic region. While little more than half of all seasonal benefit claims in Ontario is Group A, and about three-fifths for three other regions, the proportion in the Atlantic area is about three-quarters.

Region	Seasonal A as per cent of all seasonal claims established
Atlantic	74.9
Quebec	60.9
Ontario	55.3
Prairie	62.1
British Columbia	63.3
Canada	63.0

The Atlantic provinces and Ontario accounted for relatively more seasonal claims established at weekly rates of benefit less than \$23. The Atlantic and Pacific region accounted for relatively more established for longer duration.

Seasonal A constituted, as observed, 63 p.c. of all seasonal claims established. The proportion was higher for single persons, for those under 25 years of age, for primary and service occupations workers, and for periods of authorization from 10 to 19 weeks.

Claims which lapsed accounted for 51.9 p.c. of all seasonal established but only 37.2 p.c. of weeks paid. Conversely, claims where all benefit was drawn made up 48.1 p.c. of all seasonal established but as much as 62.8 p.c. of weeks paid.

Claimants under 45 years of age accounted for 66.3 p.c. of all seasonal claims established but for slightly less (63.1 p.c.) of weeks paid.

The exhaustion rate on seasonal terminations overall was 48.1 p.c. but ranged by province from 71.4 p.c. in Newfoundland to 36.5 p.c. in Saskatchewan. The rate overall for men was 48.0 p.c. and for women 48.4 p.c. Nevertheless, men had a higher exhaustion rate than women in Newfoundland, Prince Edward Island, New Brunswick, Quebec and Manitoba.

The rate ranged from 69.3 p.c. for claimants aged 65 or more to 41.2 p.c. for teenagers. The male rate exceeded the female for teenagers and was less for other age groups. Both married men and women had higher rates than single men and women. While the rate for single men exceeded that for single women, the reverse applied for married claimants. The rate for married claimants exceeded that for single claimants for those under 25 years of age, and those over 64 years of age.

Marital status	Exhaustion ratio		
	Male	Female	Both sexes
Single	46.7	39.1	45.7
Married	48.4	50.8	49.0

Potential Benefit Weeks Used

Tables 27 and 36 give the number of benefit periods (regular, Seasonal A and Seasonal B) classified first by maximum weeks authorized and sex, and then by weeks paid. Table 27 is abbreviated in order to save space, by using groupings of two weeks for part of the figures.

The upper part of Table 27 relates to claimants with a low potential duration. This probably includes a large share of young persons ordinarily in casual employment, and others whose attachment to insurable employment is limited. The lower part of the table includes many persons with a longer time in insurable employment. For men this would mean more generally older persons who are better established. Family responsibilities would encourage an earlier return to work, but in some cases because of age and industrial change they might be on the way out of the labour force. This picture is probably less accurate for women represented in the lower part of Table 27.

Passing from left to right on any line of Table 27 or Table 36, we distinguish first those claims on which no benefit was drawn, then those on which some was drawn, and on the extreme right an indication of those whose benefits have been exhausted.

Telescoping the weeks to abbreviate Table 27 has the unfortunate result that exhaustions are not sharply delineated at the extreme right of the table. The original tabulation shows 28,225 and 51,770 male claims authorized 51 and 52 weeks of benefit. Only 3,155 of the former and 90 of the latter exhausted their benefits. Some 1,460 of those authorized 52 weeks drew 51 weeks, or one week less than their maximum authorization. The abbreviated table

includes those 1,460 with the 3,155 and 90 at the extreme right of the line for the 79,995 with 51-52 potential weeks.

Making allowance for termination of benefit through death or withdrawal from the labour force, persons drawing less than the authorized number of weeks may be presumed to have returned to work.

Table E indicates that less than half of regular authorized weeks were drawn on claims. For very short authorizations, men on regular claims drew a higher percentage than did women, but less for longer authorizations. Men used more of potential weeks than women in the case of Seasonal A claims, but less than women in the case of Seasonal B claims.

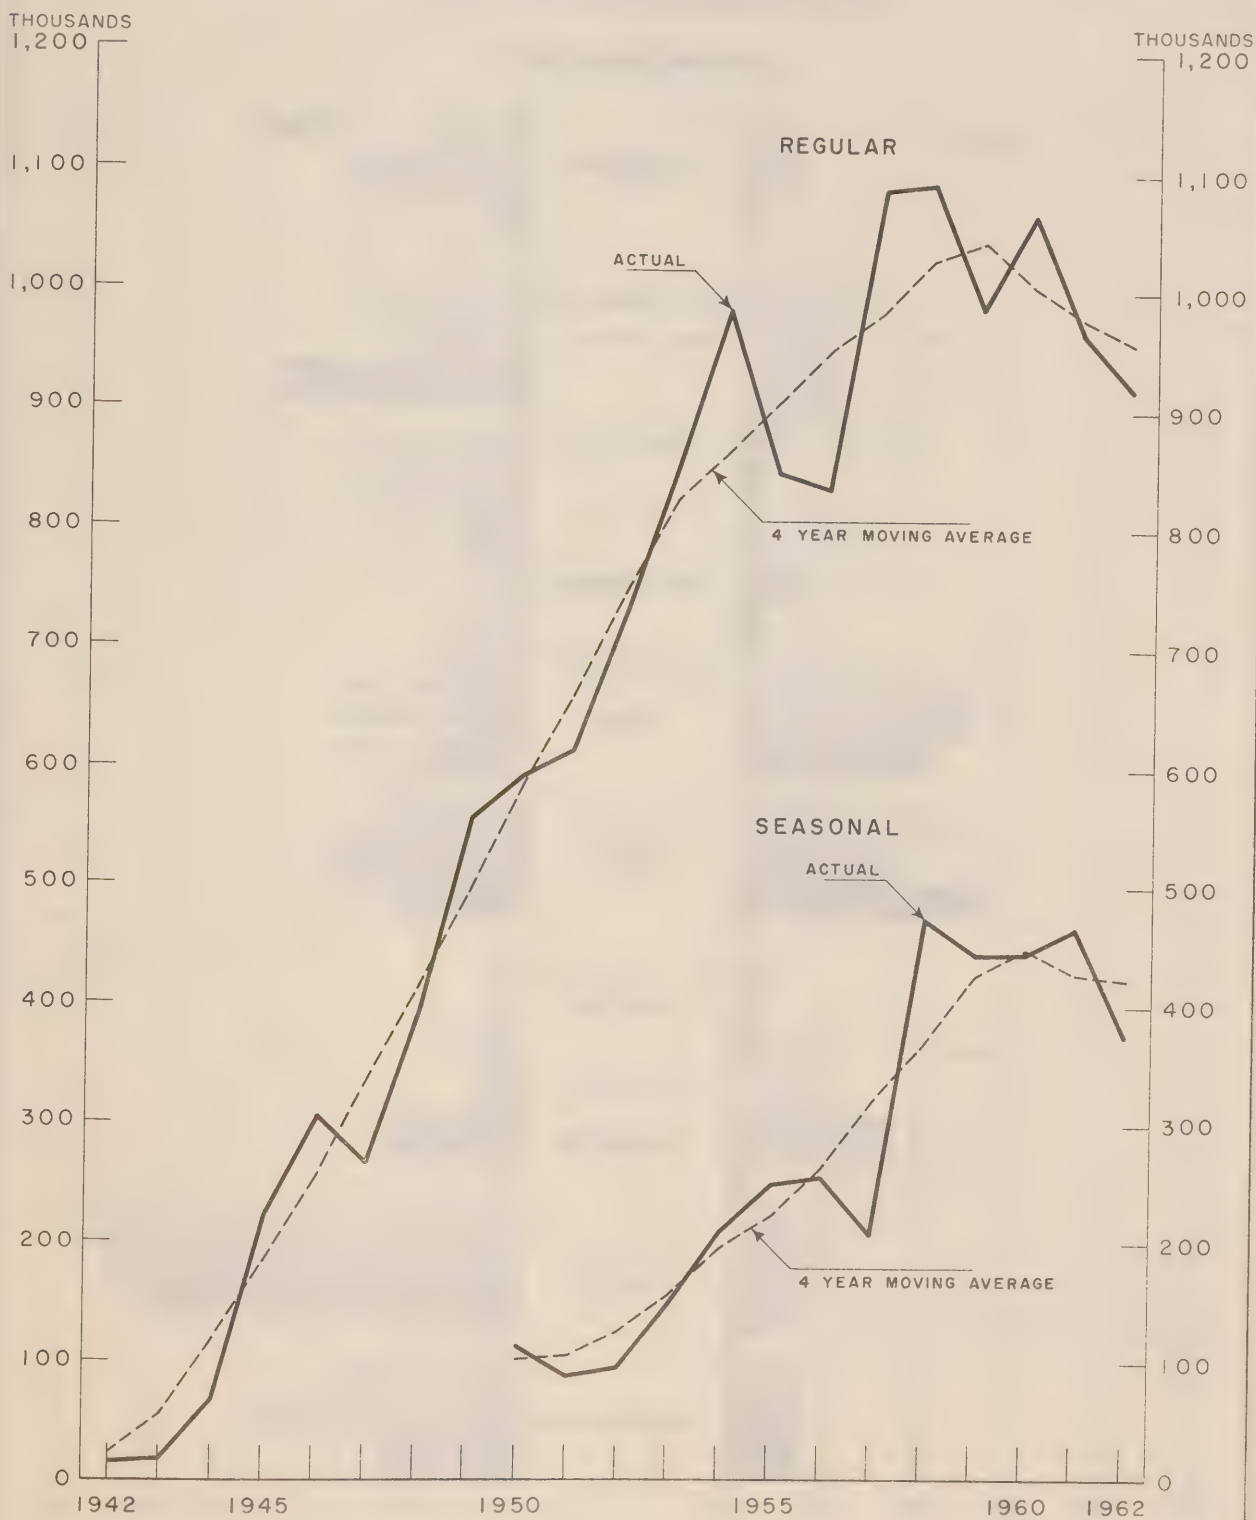

TABLE E. Percentage of Potential Benefit Weeks Drawn on Benefit Periods Terminated by Weeks Authorized, Benefit Group and Sex, 1962

DETAILED TABLES

TABLE 1. Number of Persons Issued an Unemployment Insurance Book, by Industry, or Marital Status, Age and Sex, June 1, 1962

Based on 10% sample

No.	Characteristic	All ages			Under 20		20-24	
		Total	Male	Female	Male	Female	Male	Female
	Industry							
1	Totals	4,084,050	2,936,760	1,147,290	134,340	123,910	398,120	229,830
2	Agriculture	10,350	8,630	1,720	870	300	1,610	270
3	Forestry	44,220	42,980	1,240	3,290	100	6,390	270
4	Fishing, hunting and trapping	8,800	8,670	130	670	10	950	20
5	Mines, (including milling) quarries and oil wells	93,360	89,300	4,060	2,210	240	11,800	1,010
6	Metal mines	50,570	49,280	1,290	1,060	120	6,340	310
7	Mineral fuels	15,860	14,610	1,250	210	20	1,450	380
8	Non-metal mines (except coal mines)	10,920	10,610	310	450	20	790	70
9	Quarries and sand pits	5,110	4,760	350	80	20	700	40
10	Services incidental to mining	10,900	10,040	860	410	60	2,520	210
11	Manufacturing	1,344,310	1,012,620	331,690	40,000	36,750	118,850	63,670
12	Foods and beverages	206,520	152,610	53,910	7,910	6,270	19,250	9,380
13	Tobacco products	11,480	5,970	5,510	140	210	620	930
14	Rubber	23,810	18,480	5,330	530	380	1,850	1,010
15	Leather	33,250	17,580	15,670	2,260	2,860	2,810	3,160
16	Textile	68,850	44,000	24,850	2,660	3,130	7,350	4,900
17	Knitting mills	22,160	6,920	15,240	820	2,340	1,120	3,160
18	Clothing	85,660	22,630	63,030	2,090	8,310	3,050	10,700
19	Wood	80,220	75,400	4,820	4,620	510	9,610	960
20	Furniture and fixtures	33,840	28,800	5,040	1,940	630	3,940	870
21	Paper and allied	94,740	80,640	14,100	1,740	1,310	8,620	2,830
22	Printing, publishing and allied	68,040	46,050	21,990	3,010	2,330	7,780	4,040
23	Primary metal	100,690	95,260	5,430	830	410	7,980	1,430
24	Metal fabricating	96,080	84,650	11,430	2,920	940	9,630	2,180
25	Machinery	52,860	46,610	6,250	800	420	4,870	1,650
26	Transportation equipment	113,130	102,780	10,350	1,620	620	8,190	2,220
27	Electrical products	84,140	56,820	27,320	1,520	2,530	6,860	5,580
28	Non-metallic mineral products	43,390	38,180	5,210	1,110	570	4,200	1,340
29	Petroleum and coal products	17,510	15,000	2,510	180	170	1,370	720
30	Chemical and chemical products	57,940	42,200	15,740	890	950	4,640	3,390
31	Miscellaneous manufacturing	50,000	32,040	17,960	2,410	1,860	5,110	3,220

APPENDIX B

Note on Benefit Repeaters

Introduction

This note reports the results of an investigation of the incidence and characteristics of persons who terminated any benefit, regular or seasonal or both, in 1957 and also one and two years later. Unlike the data in the main part of the publication that are compartmentalized into regular and seasonal, figures here show shifts from one type of benefit to another.

Data used were obtained from files of punch cards for regular benefit periods terminating in the calendar years 1957 to 1959; and seasonal benefit periods terminating between December 1, 1957 and June 28, 1958 (referred to as 1957 seasonal), between December 1, 1958 and May 16, 1959 (1958

seasonal), and between December 1, 1959 and May 21, 1960 (1959 seasonal). A 5 p.c. sample was used, yielding 53,932 terminations in 1957. The sample was selected on the basis of the insurance number of the claimant terminating benefit, using numbers ending in 4 preceded by an odd digit. The 1957 group of termination cards was compared with the 1958 and 1959 groups having sample numbers. "Benefit repeaters" were the matched cards (1957 and 1958, 1957 and 1959).

Benefit repeaters were arranged according to the type of benefit they drew in 1957 and in the later year (1958 or 1959). The possible permutations are shown in Figure 1. Each path of the tree is a possible permutation of repeaters.

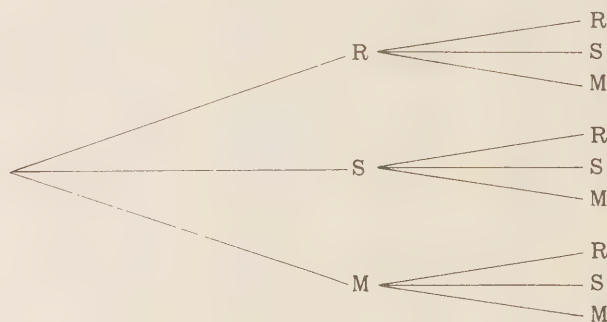

Figure 1.

The 1957 terminations were segregated according to whether they drew "regular benefit only", denoted by R; "seasonal benefit only", denoted by S; and "a mixture of regular and seasonal benefit", denoted by M. Persons who drew benefit in 1958 and in 1959 are related to these groupings.

No attempt is made to show the paths from 1957 through 1958 to 1959 benefit as in Figure 2. This means that it is not possible to distinguish the number of terminations in 1957 who went off benefit in 1958, denoted by O, but subsequently drew benefit in 1959. The number of 1957 terminations repeating in 1959 dropped by 123,420 from the 559,180 estimated for 1958. However, the decline may have been even greater for the 1958 repeaters subsequently on benefit in 1959, being offset partly by those drawing no benefit in 1958 who drew in 1959.

Overall Pattern of Repeating Benefit

Some 52 p.c. of terminations in 1957 repeated in 1958, and some 40 p.c. repeated in 1959. These are very high percentages. They imply that of every

100 terminations in 1957, 48 were non-repeaters in 1958 and 60 in 1959. Nothing is known about persons terminating benefit in 1957 who died or withdrew from the insured labour force in 1958 or 1959. Consequently, the estimate of non-repeaters may be a little high, and the estimate of repeaters a little low. The incidence of benefit repeaters reported here is subject to this qualification.

This particular study did not isolate the chronic or persistent repeater who draws benefit year after year. An estimate of the proportion of 1957 terminations who repeated benefit in both 1958 and 1959 would be higher than 16 p.c. and somewhat lower than 40 p.c., perhaps about 25 p.c. The upper limit of 40 p.c. is based on the proportion of 1957 terminations who repeated in 1959. This is too high, as can be seen from Figure 2, because it includes those who went off benefit in 1958. The lower range of 16 p.c. is based on a tabulation of repeaters through some but not all of the routes illustrated (such as regular benefit in 1957, again in 1958 and again in 1959).

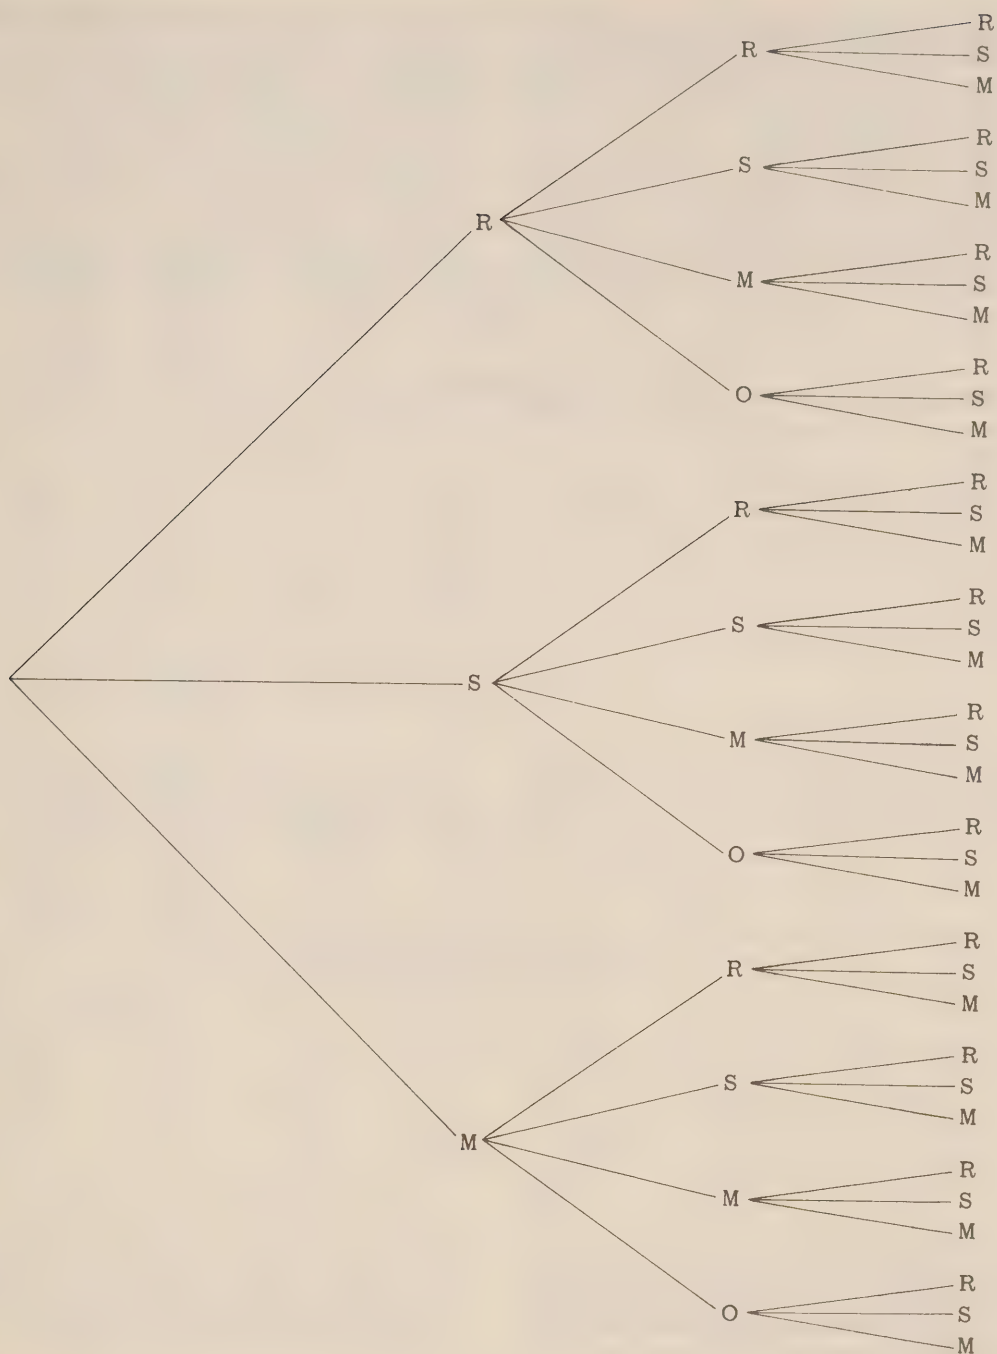

Figure 2.

Table A1 shows a drop of 12 percentage points in the second year repeater rate. The rate for R terminations dropped only 3 percentage points between 1958 and 1959, but the rate for S terminations was lower by 33 points and for M terminations by 19 points. Consequently, the spread between R, S and

M repeater rates narrowed. Would an examination of 1957 terminations in 1960 show a further drop in repeaters? Would there be a limit towards which these rates would converge? Unfortunately, these questions and others that readily occur can not be answered.

TABLE A 1. Distribution of 1958 and 1959 Repeaters by Before and After Benefit Type
(Based on 5 p.c. sample)

Type of benefit in 1957		Repeaters by type of benefit in 1958				Total in 1957
		R	S	M	Total	
R S M Totals		Number				
		215,440	22,720	43,240	281,400	670,100
		90,360	35,580	35,900	164,840	226,440
		47,140	26,980	38,820	112,940	182,100
		352,940	88,280	117,960	559,180	1,078,640
R S M Totals		Per cent				
		32	3	6	42	100
		40	17	16	73	100
		26	15	21	62	100
		33	8	11	52	100

Type of benefit in 1957		Repeaters by type of benefit in 1959				Total in 1957
		R	S	M	Total	
R S M Totals		Number				
		203,460	20,960	38,400	262,820	670,100
		26,380	48,600	16,480	91,460	226,440
		24,440	32,480	24,560	81,480	182,100
		254,280	102,040	79,440	435,760	1,078,640
R S M Totals		Per cent				
		30	3	6	39	100
		12	22	7	40	100
		13	18	14	45	100
		24	10	7	40	100

Persons terminating R benefit in 1957 constituted 50 p.c. of the repeaters in 1958 and 60 p.c. in 1959. This is seen in Table A2 along with the percentages for 1957 S and M's. Repeaters and non-repeaters differed markedly in 1958 when classified

by type of benefit in 1957. This was not the case in 1959. Other factors such as sex, region and age must have been more important in differentiating repeaters and non-repeaters in 1959.

TABLE A 2. Distribution of Repeaters (A) and Non-Repeaters (\bar{A}) by Prior Benefit

Type of benefit in 1957	1957-58		1957-59	
	A	\bar{A}	A	\bar{A}
per cent				
1957 R	50	75	60	63
1957 S	30	12	21	21
1957 M	20	13	19	16
1957 any benefit	100	100	100	100

Examination of marginal rows and columns of Table A.1 does not disclose the movement into and out of one or the other type of benefit. The body of the table answers the question whether repeaters collect the same type of benefit year after year.

The top panel of Table A1 shows 215,440 of the R's, 35,580 of the S's, and 38,820 of the M's totalling 289,840 or 52 p.c. repeated the same type of benefit in 1958 as in 1957. Conversely, the proportion who changed was 48 p.c. This is shown in Table A3.

Claimants who drew R benefit in 1957 tended to collect the same type of benefit to a greater degree than those drawing S or M benefit. Going back to Table A1 it is obvious changes made in 1958 and 1959 by 1957 R's were made more to M than to S benefit. Changes made by 1957 S's in 1958 and 1959 were mainly to R benefit. However, while 1957 M's in 1958, who changed benefit, moved mainly to R benefit, a different pattern is clear in 1959. In this year more of 1957 M's who repeated benefit moved to S than to R benefit.

TABLE A 3. Percentage of Repeaters Changing Benefit by Prior Benefit Type

Type of benefit	1957-58	1957-59
1957 R's	23	23
1957 S's	78	47
1957 M's	66	70
Totals	48	36

Differences among R S and M Terminations in 1957

The statistical analysis of benefit repeaters given so far has emphasized the distinction between R, S and M beneficiaries. The rationale for this—

apart from the two programs which exist for regular and seasonal benefit and the shifting that takes place between people who use both—may be strengthened by a study of Table A4.

TABLE A 4. Percentage Distribution of 1957 Terminations by Benefit Type and Specified Characteristics

Characteristic	R	S	M	Total
Totals	100	100	100	100
Sex:				
Male	77	78	84	78
Female	23	22	16	22
Region:				
Atlantic	11	21	20	14
Quebec	31	31	36	32
Ontario	33	26	25	30
Prairie	13	11	10	12
Pacific	12	10	10	11
Age:				
14-19	4	15	5	6
20-24	17	17	16	17
25-44	51	42	42	47
45-64	24	21	29	24
65 and over	4	5	9	5
Last Industry:				
Primary	11	21	20	15
Manufacturing	34	25	27	31
Construction	18	19	23	19
Transportation and other utilities	14	8	9	11
Trade, finance, service	23	27	21	24
Number of cases	33,505	11,322	9,105	53,932

S and M distributions in contrast to the R distribution are very much affected by male claimants, persons from the Atlantic area, teenagers (in the case of S), elderly claimants, and workers from primary industries.

Sex Differences

Women had much lower overall repeater rates than men in both 1958 and 1959. The spread between R, S and M repeater rates narrowed in 1959 for both men and women.

A figure that seems out of line is the proportion of female S terminations in 1957 who went on R benefit in 1958. This rate at 56 p.c. was much higher

than for men at 36 p.c. and is the only instance in 18 cases where the female rate exceeded the male rate.

Women constituted 16 p.c. of the 1957-8 repeaters and 27 p.c. of the non-repeaters. The corresponding percentages for the 1957-9 groups were 13 p.c. and 27 p.c.

Women repeaters switched the type of benefit drawn in the case of second-year repeaters more than did men, but differed little for third-year repeaters. Some 46 p.c. of men and 56 p.c. of women changed benefit from 1957 in 1958. The figures for 1959 were 37 p.c. and 34 p.c.

Regional Differences

The Atlantic provinces and Quebec had the highest overall repeater rates for both years studied. This held up, as well, for each of R, S and M 1957 terminations. The decrease in repeater incidence in 1959 applied in each region.

Turnover rates (movement from one type of benefit to another) were highest in Quebec for both 1957-8 and 1957-9 repeaters. For the first group the rate ranged narrowly by regions from 49.1 p.c. to 45.9 p.c. For the latter group the rates varied from 40.0 p.c. to 32.8 p.c.

Age Differences

Teenagers accounted for about the same proportion of repeaters and non-repeaters in both 1958 and 1959. Those aged 20 to 24 made up less of the repeaters than of the non-repeaters in both years. The pattern is mixed for those aged 25 to 44. They accounted for relatively more of the non-repeaters in 1958, but more of the repeaters in 1959. Those aged

45 to 64 accounted for more of the repeaters in both years. Older claimants aged 65 or over accounted for relatively fewer repeaters than non-repeaters in both years.

The odd figure is the very high proportion of older claimants on S benefit in 1957 who drew R benefit in 1958.
